Salair FAQ

salbutamol
reliever inhaler

Salair Inhaler is used to relieve symptoms of asthma and other asthma-like conditions.

Provides short-acting bronchodilation (4-6) hours with fast onset of action.

Salair Inhaler is used to relieve symptoms of asthma and other asthma-like conditions such as coughing, chest tightness and wheezing. It is suitable for long term use in the relief and prevention of asthmatic symptoms.

Salair Inhaler is a prescription medicine for oral inhalation only.

What is Salair Inhaler?

Salair Inhaler contains Salbutamol (as sulphate) 100 mcg, an asthma medication that opens up the airways in your lungs.

What is Salair Inhaler used for?

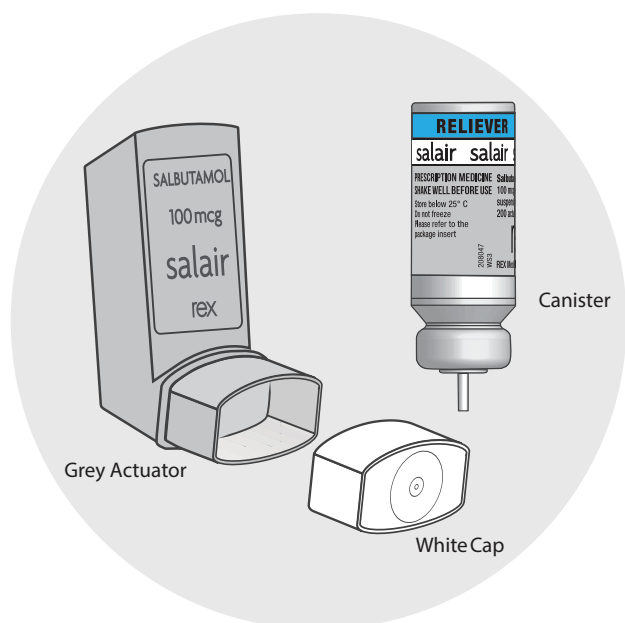

Salair Inhaler is a "reliever" inhaler that is used to relieve symptoms of asthma and other asthma-like conditions such as coughing, chest tightness, and wheezing.

Salair Inhaler is also used for the prevention of asthma symptoms brought on by exercise or exposure to allergens, such as animal fur, pollen or household dust.

Salair Inhaler is also used for the prevention and treatment of bronchospasm. Salair Inhaler provides short-acting (4-6) hours bronchodilation with fast onset of action. It is suitable for long-term use in the relief and prevention of asthmatic symptoms, such as coughing, chest tightness, and wheezing.

Does Salair Inhaler **look the same** as the reliever inhaler that I normally use?

Salair Inhaler looks different to other Salbutamol medication which you may have used in the past. Salair Inhaler has a white cap and a grey body. The metal canister has a blue, white and grey label.

Will Salair Inhaler **taste the same** as the reliever inhaler that I normally use?

If you have previously used another inhaler, you might notice that the spray from Salair Inhaler tastes or feels different in your mouth, or that the inhaler sounds different when sprayed. This does not affect the way your inhaler works.

Does Salair Inhaler **work the same** as the reliever inhaler that I normally use?

Salair Inhaler contains Salbutamol (as sulphate) as an active medicine. Most reliever inhalers contain Salbutamol (as sulphate) as an active medicine.

If your previous reliever inhaler also uses Salbutamol (as sulphate), then Salair Inhaler can be prescribed to manage the same conditions.

Is Salair Inhaler right for me?

Discuss your asthma symptoms with your doctor or pharmacist and ask whether Salair Inhaler is the appropriate choice for you.

Note: If there is an increased need to use Salair Inhaler more frequently, then you should contact your doctor or nurse to check on the control of asthma with preventer and symptom controller inhalers.

Inhalers are best used with a spacer as more medication will reach your lungs than an inhaler on its own.

Salair Inhaler has risks and benefits. SALAIR INHALER contains Salbutamol 100 mcg, PRESCRIPTION MEDICINE. **Indication:** Salair Inhaler is indicated for the prevention and treatment of bronchospasm and acts on the β_2 (beta-2) adrenoceptors of bronchial muscle at therapeutic doses, with little or no action on the β_1 (beta-1) adrenoceptors of the heart. With its fast onset of action, it is particularly suitable for the management and prevention of attack in mild asthma and for the treatment of acute exacerbations in moderate and severe asthma. **Dosage and Administration:** Salair Inhaler is for oral inhalation only. Salair Inhaler should not be used on demand more than four times per day. Please review the Consumer Medicine Information for the recommended doses of Salair Inhaler for children and adults. **Contraindications:** Management of threatened abortion and premature labour is contraindicated with Salbutamol formulations administered non intravenously.
