From the initial idea
to the solution

Reflex - The Company

Smooth operation in supply engineering thanks to system solutions

Reflex Winkelmann GmbH belongs to the Heating&Water division of the Winkelmann Group with 4,200 employees worldwide. The company is a leading brand manufacturer and solution provider for the smooth operation of water-carrying systems in supply engineering and modern building services. In addition to expansion vessels, we develop, manufacture and distribute innovative components and complete solutions for pressure-maintaining, water make-up, degassing, water treatment and storage as well as heat exchangers.

Extensive Product Range

Reflex represents a large range of products and services, offering innovative systems for heating, cooling and hot-water supply and a multitude of other services.

The Reflex product range comprises:

- Expansion Vessels
- Pressurisation Systems
- Water Make-Up Systems & Water Treatment
- Degassing Systems & Separation Technology
- Hot Water Storage Tanks & Heat Exchangers

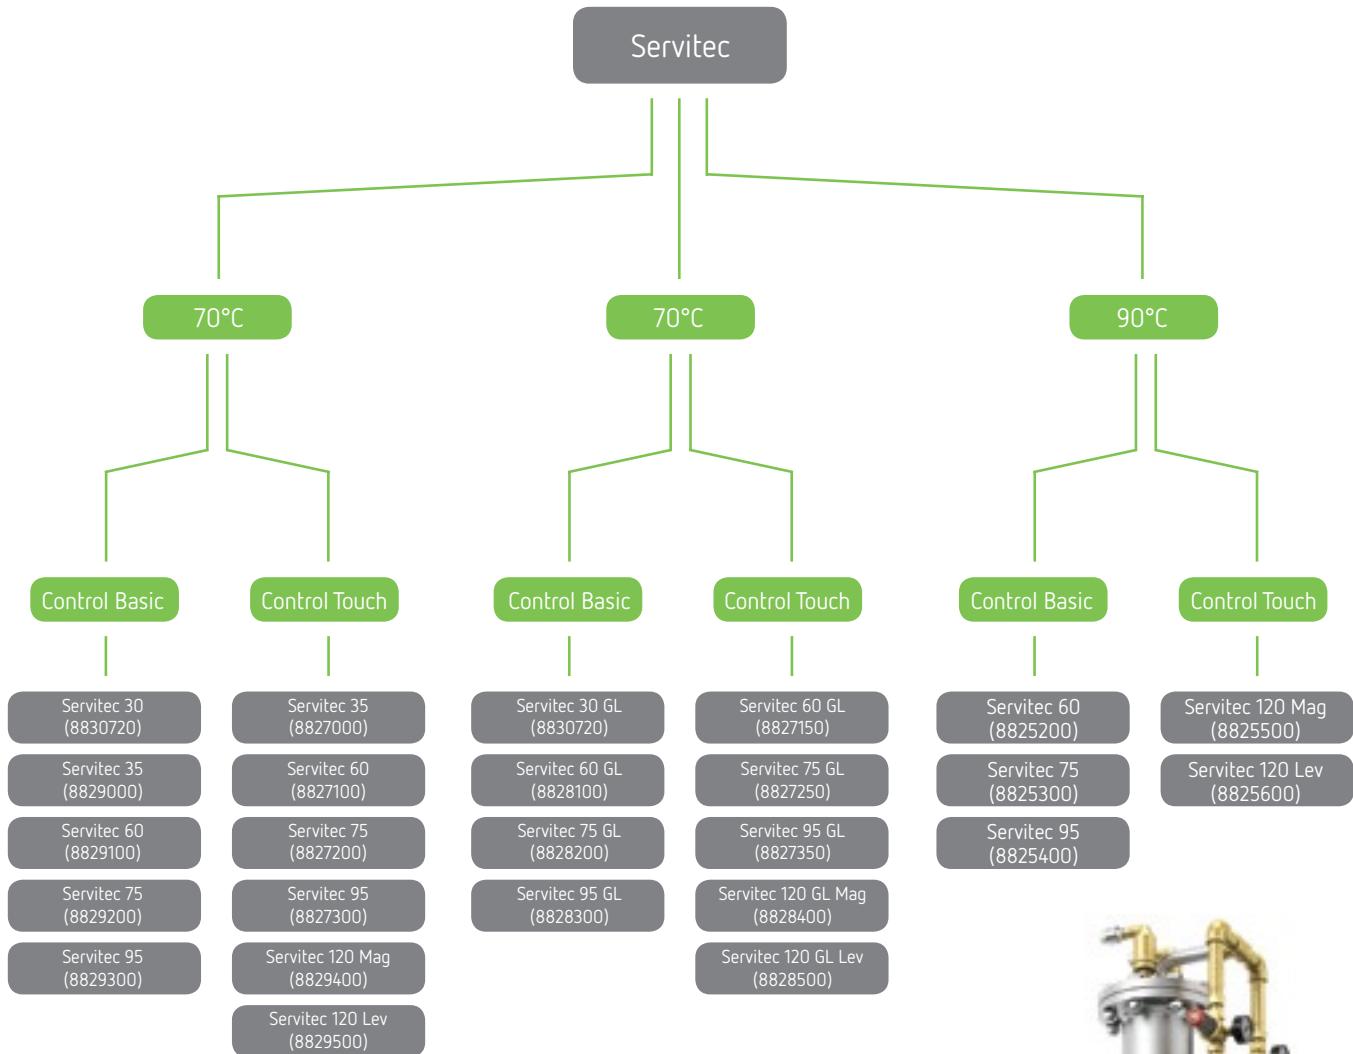

**For constant reliable heat
and water supply.**

Deaeration Systems & Separation Technology

Reflex Control

Control Basic

- 2-line LCD display
- 8 control keys
- 2 status LED
- Integrated control of system pressure, deaeration and water make-up
- Manual and automatic operation
- Common fault output signal
- Input, for contact water meter
- RS-485 interface

Control Touch

- 4.3" touch screen colour display
- Graphic user interface
- Simply structured plain text menus including operating instructions and help texts
- Integrated control of system pressure, deaeration and water make-up
- Manual and automatic operation
- Permanent display of the most important operating parameters in the system diagram
- Intelligent Plug & Play operational management
- Evaluation and storage of the most important operational data
- Extensive interfaces:
 - Input, for contact water meter
 - 2 x dry contact outputs for error messages
 - 2 x analogue outputs for pressure and vessel content
 - 2 x RS-485 interfaces
 - Plugs for Bluetooth module and HMS networks, as well as SD card

Control Remote NEW!

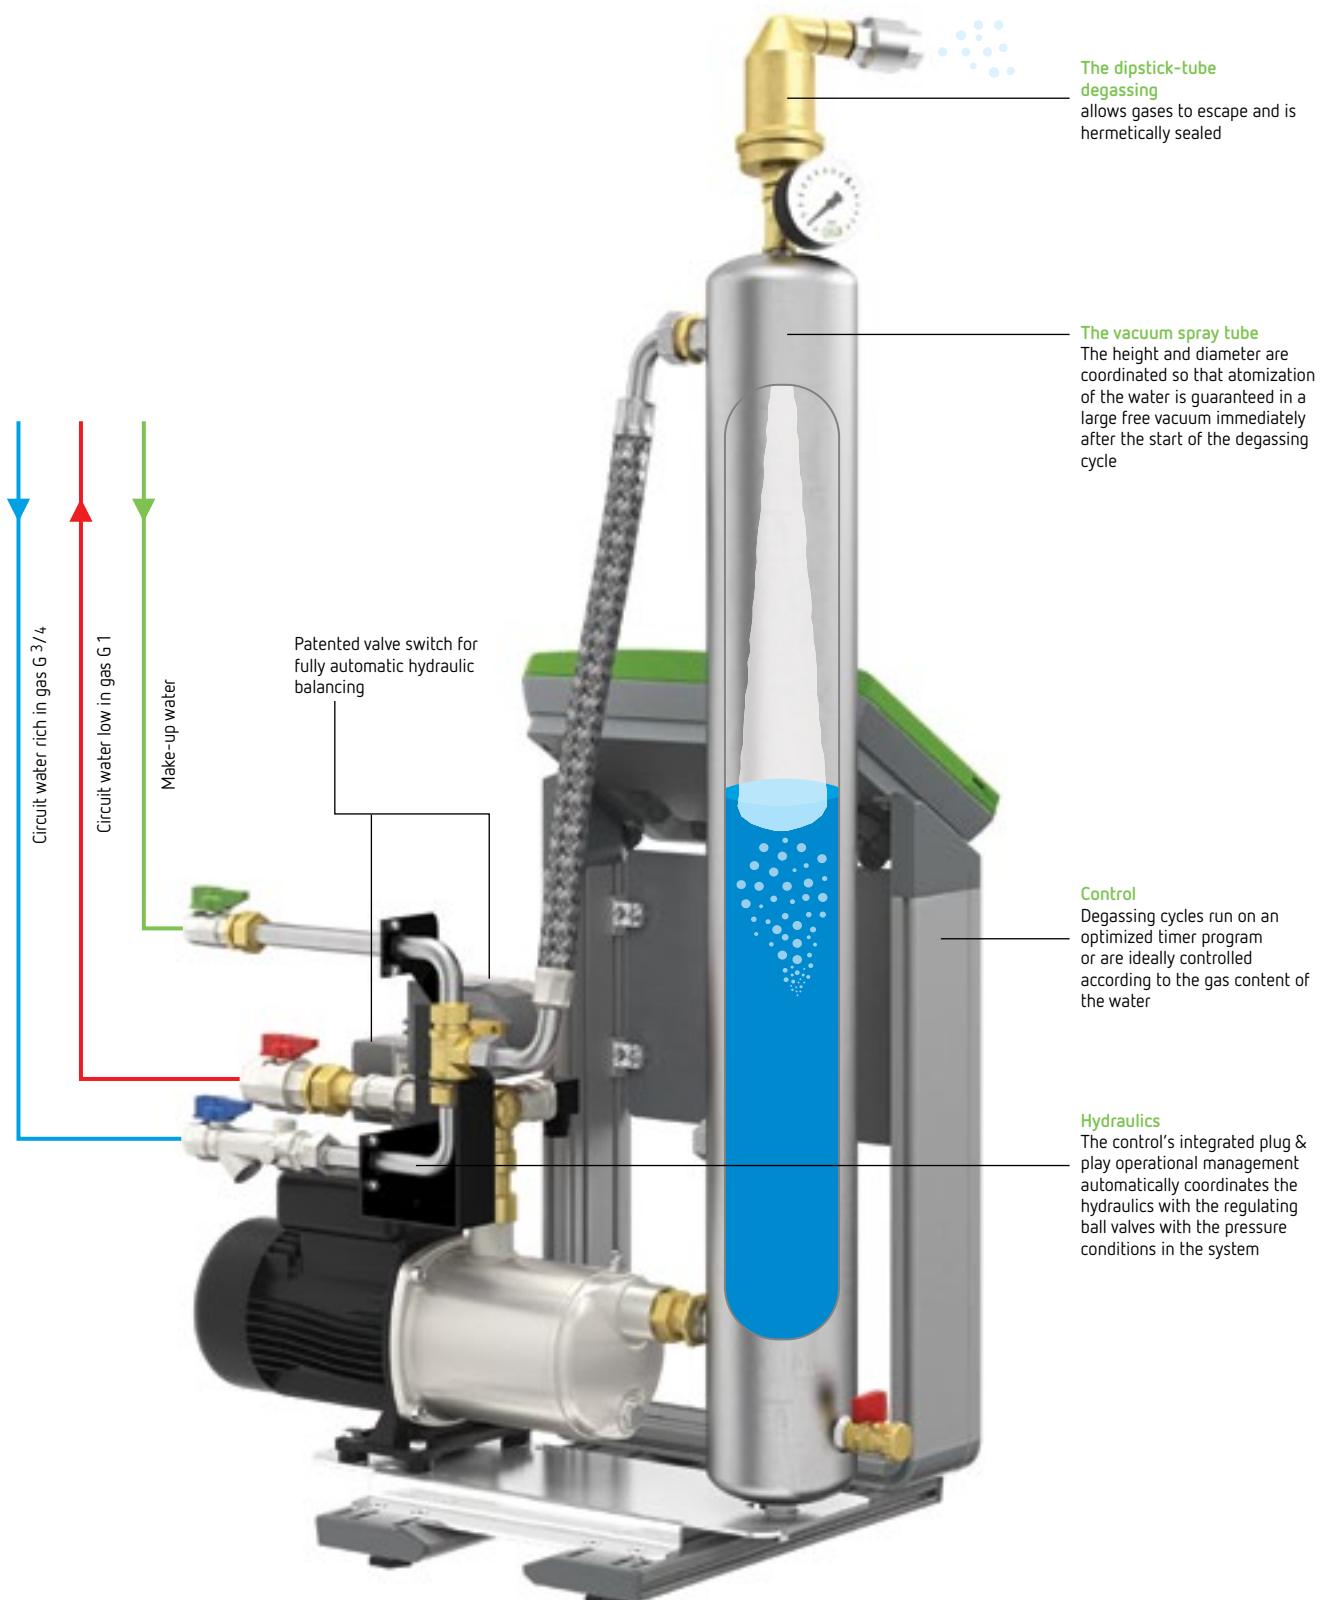

- Remote control via secure server
- System monitoring via PC or mobile device at any time and everywhere
- (Professional) remote servicing by Reflex Customer Service
- Reflex Remote Portal with intuitive user interface
- Simple management of multiple installations
- Visualisation of all parameters
- Diagrams for run-time monitoring
- Alarm messages via e-mail or messaging
- User-provided Internet or GSM connection
- Factory-installed or retrofitting, independent of Touch or Basic

Reflex Control is the intelligent control solution for your deaeration and separation needs. It offers three levels of control: Basic, Touch, and Remote. The Basic and Touch versions provide integrated control of system pressure, deaeration, and water make-up, with manual and automatic operation options. The Touch version features a 4.3" touch screen color display and a graphical user interface. The Remote version allows for remote control via a secure server, system monitoring via PC or mobile device, and professional remote servicing by Reflex Customer Service. All versions include extensive interfaces such as dry contact outputs for error messages, analogue outputs for pressure and vessel content, and RS-485 interfaces. The system is designed for easy installation and management, with a simple management interface and visualisation of all parameters.

Servitec

Patented Technology for Optimum Degassing

Servitec in Magcontrol and Levelcontrol Mode

Reflex Servitec in magcontrol mode combined with expansion vessel system

PIS

Filling - Make-Up,
Pressure-Dependent-
Magcontrol

The pressure is shown in the display Excess and insufficient pressure levels are signaled Automatic, controlled make-up in the event that the system fails to reach the filling pressure of 0.2 bar Servitec degassing of the make-up and filling water

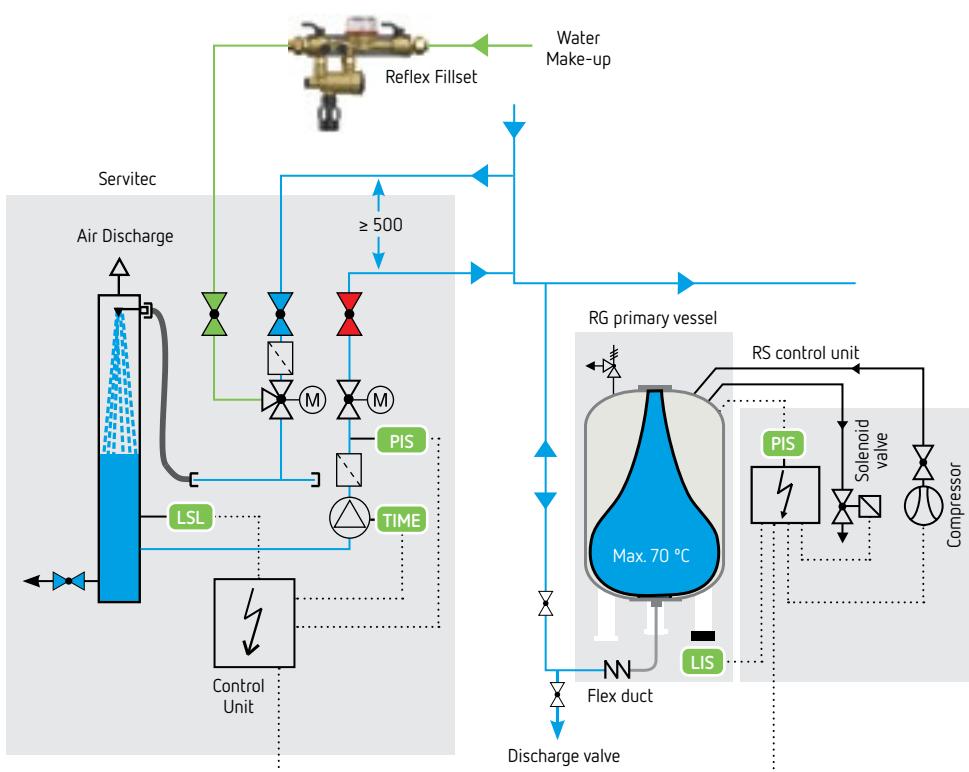

TIME

Degassing

Vacuum degassing of a part flow of the circuit water takes place according to an optimized schedule using a selectable degassing mode.

- Continuous degassing (after start-up)
- Interval degassing (automatically activated after continuous degassing)

Reflex Servitec in levelcontrol mode for systems with compressor controlled pressure maintaining station

LIS

Water Make-up,
Level-Dependent
Levelcontrol

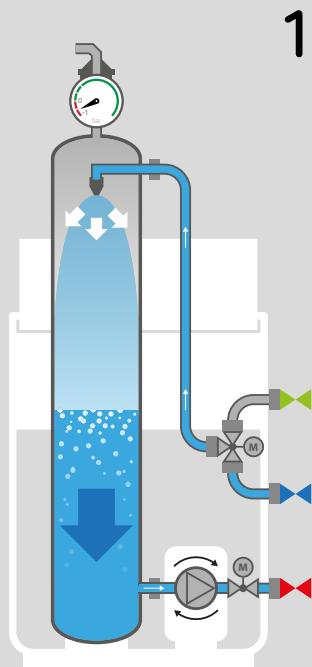

Automatic, controlled water make-up if the minimum water level is not reached in the expansion vessel of the compressor controlled pressure - maintaining station Servitec degassing of the make-up water

Servitec Working Principle

Vacuum generation

The pumps cut in, the water level drops and a vacuum is generated in the vacuum spray tube.

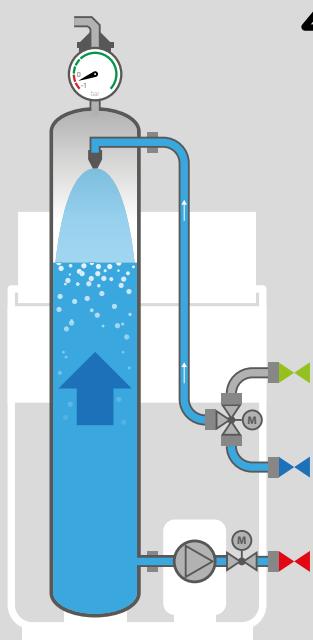

The circuit water (optionally make-up water) is atomised in the generated vacuum releasing the dissolved gases due to the vacuum and the large contact surface.

1

Degassing start

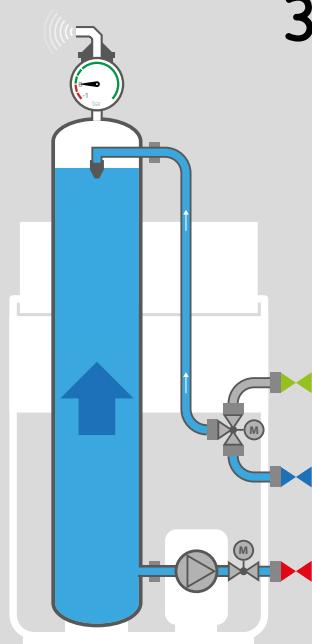

The pump shuts down. Water is sprayed until the vacuum spray tube is completely filled.

2

Degassing

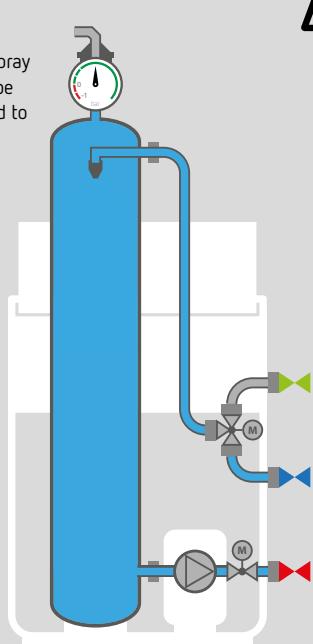

All released gases are reliably precipitated via the automatic fan.

3

Idling time

System pressure has built up in the spray tube. The system water within the tube is nearly gas-free and will be returned to the network in the following cycle.

4

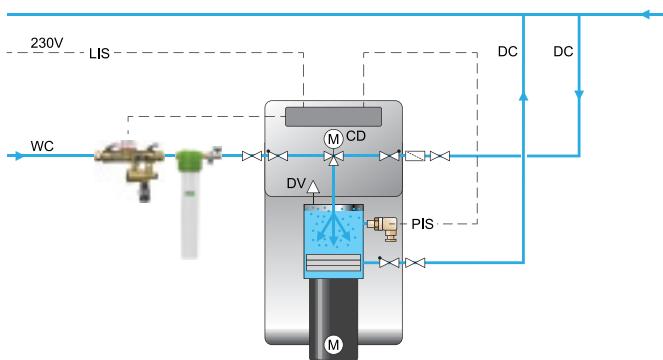

Video clips demonstrating the function of this and other products are available under www.reflex.de/services/fachwissen-und-beitraege/videothek/

Servitec 30

- Deaeration with integrated water make-up systems used in conjunction with diaphragm expansion vessels or pressurisation systems
- Ideally suited for offices and commercial buildings
- Flexible adjustment of the Servitec Magcontrol or Levelcontrol operating modes
- Central deaeration of the water in the system and make-up water
- Max. operating pressure: 8 bar
- Max. operating temperature: 70°C
- Microprocessor controller with plain text display for pressure
- Floating contact for common message
- Simple commissioning with auto setup
- Patented, fully automatic overflow regulation
- Safe control (water make-up using the actuator valve)
- Water make-up is possible from a storage tank (on site)

The Servitec 30 Mobile is based on the design of the standard unit Servitec 30. The unit is extended by a transport aid and is used for the mobile application of vacuum spray tube degassing of system and refill water for closed heating or chilled water circuits.

Control Remote

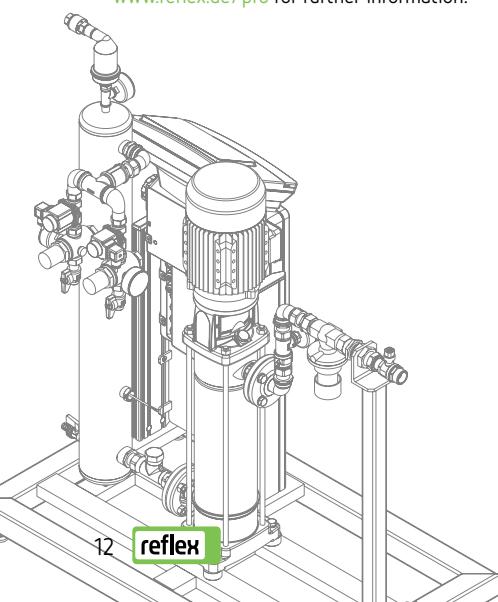

Remote monitoring, diagnostics and at last remote-control maintenance are becoming increasingly important for the supervision of supply grid systems. For the responsible on-site operator, it is more and more difficult to find qualified support staff. Long distances to sites frequently prevent quick and continuous control.

| Type | Article No | Material Group | Length mm | Width mm | Height | Weight kg |

(rear view)

Servitec 30 With Reflex G Vessel and Water Make-up

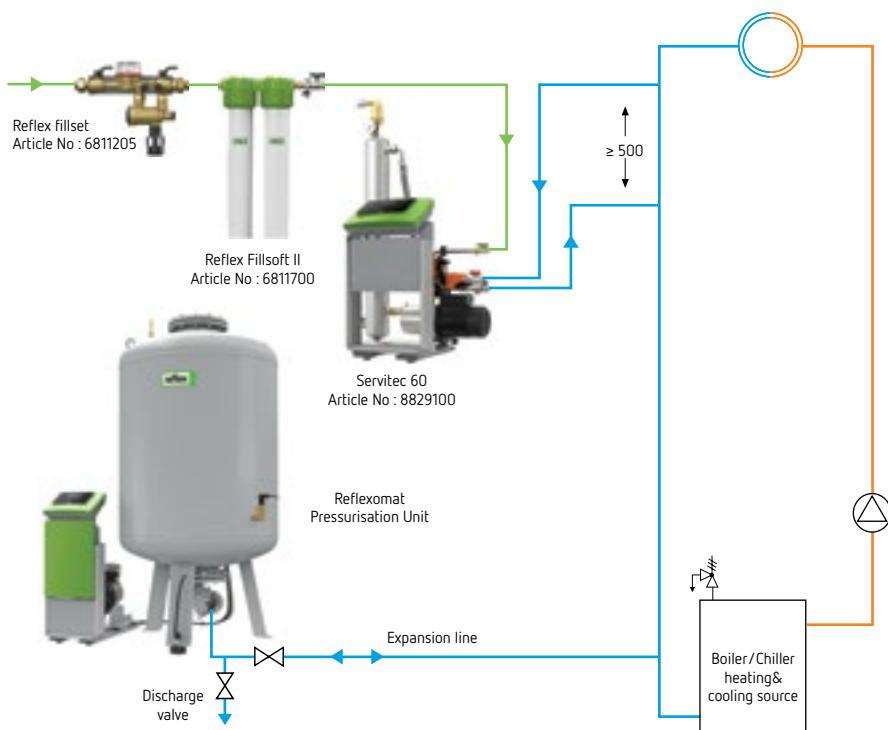

Static vessel in combination with Servitec 30 and Fillset RPZ valve. If the water level in the vessel drops to a critical level, an appropriate amount of water will be filled into the unit from the water mains via the Servitec device.

By connecting the Servitec device in Magcontrol mode make-up water is de-aerated before going into the system. The Fillset RPZ valve protects against backflow, providing protection against the contamination of mains cold water supply according to EN1717.

This combination can also be used for applications where the water supply comes from an adjacent container, as the Servitec device is self priming.

In cooling application systems : Servitec deaeration unit needs to be placed into the flow before the system circulation pump.

Servitec 30 With Reflex G Vessel and Water Make-up

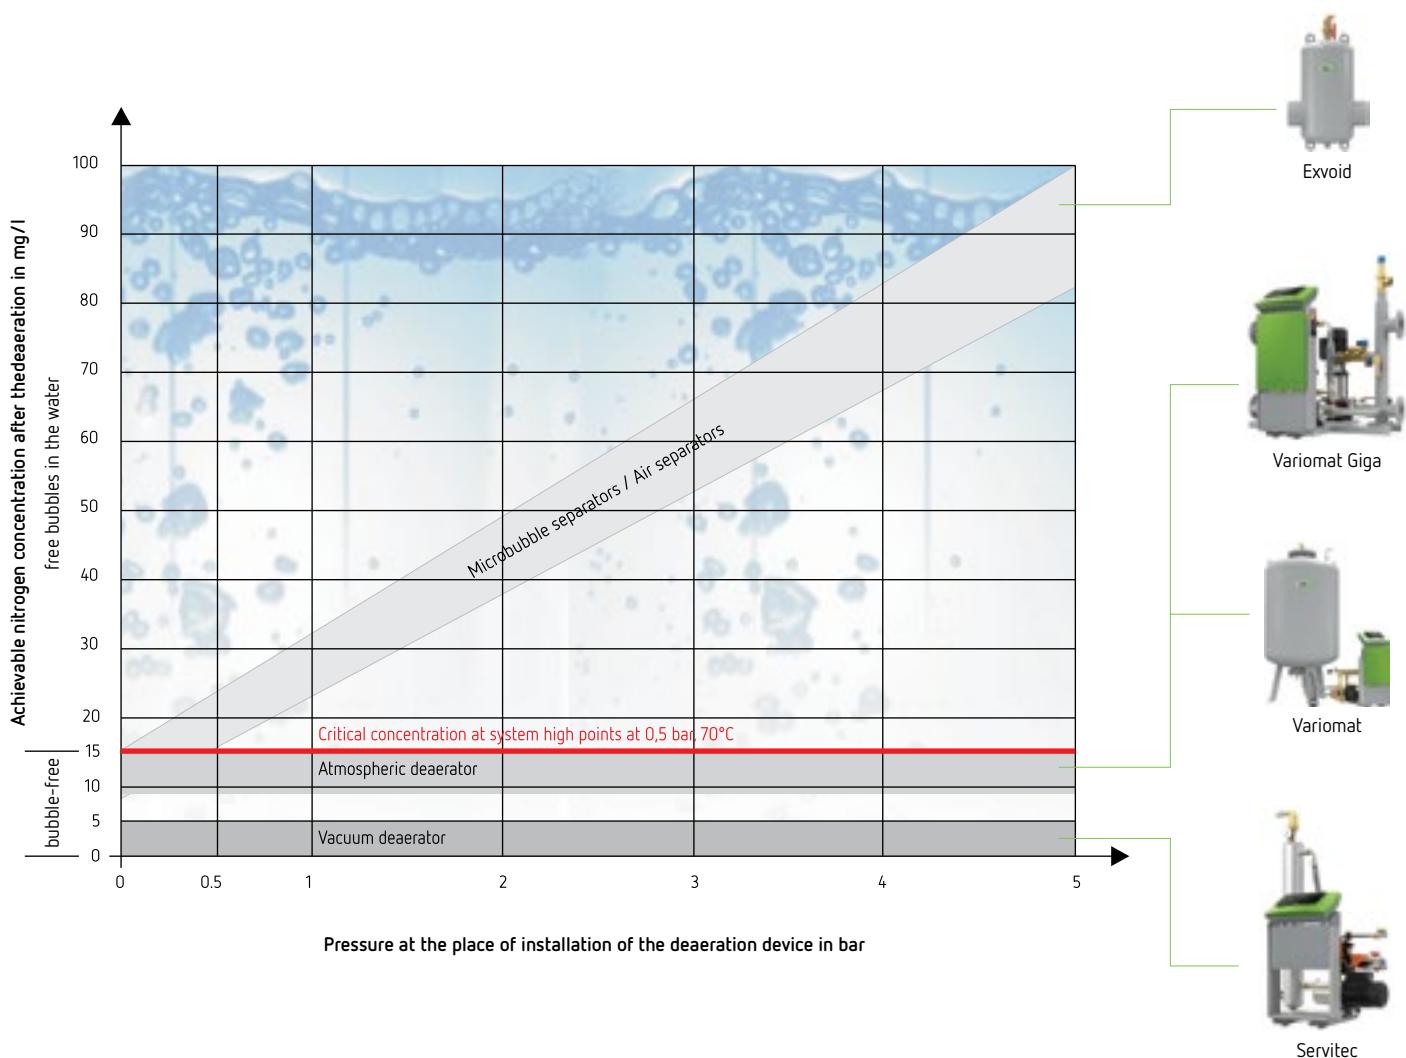

Reflexomat unit in combination with Servitec, Fillsoft II water softening device and Fillset RPZ valve. If the water level in the vessel drops to a critical level, an appropriate amount of water will be filled through the Servitec from the water mains. By the Fillsoft device the system water can be totally softened or adjusted to the required level by Servitec.

The Fillset RPZ valve protects against backflow, providing protection against the contamination of mains cold water supply according to EN1717. By connecting the contact water meter to the Variomat control unit the Fillmeter function is available.

In cooling application systems : Servitec deaeration unit needs to be placed into the flow before the system circulation pump.

Comparison of Different Deaeration Systems

In order to illustrate the effectiveness of different deaeration systems, we would like to show the physically and technically achievable, minimum nitrogen content in the network water in dependence on the pressure conditions at the place of installation Nitrogen serves as "measurement gas" because it is an inert gas and is, thus, not consumed in secondary reactions. This leads to an unbiased measurement result.

Mechanical air separators

Can only work effectively if they are installed at high points.

Atmospheric deaerators

Can prevent the formation of free gas bubbles in the circulation water. They are the best solution as a central bleeding device, but not for the purposeful oxygen separation. Erosion due to two-phase flow can be avoided to the greatest possible extent.

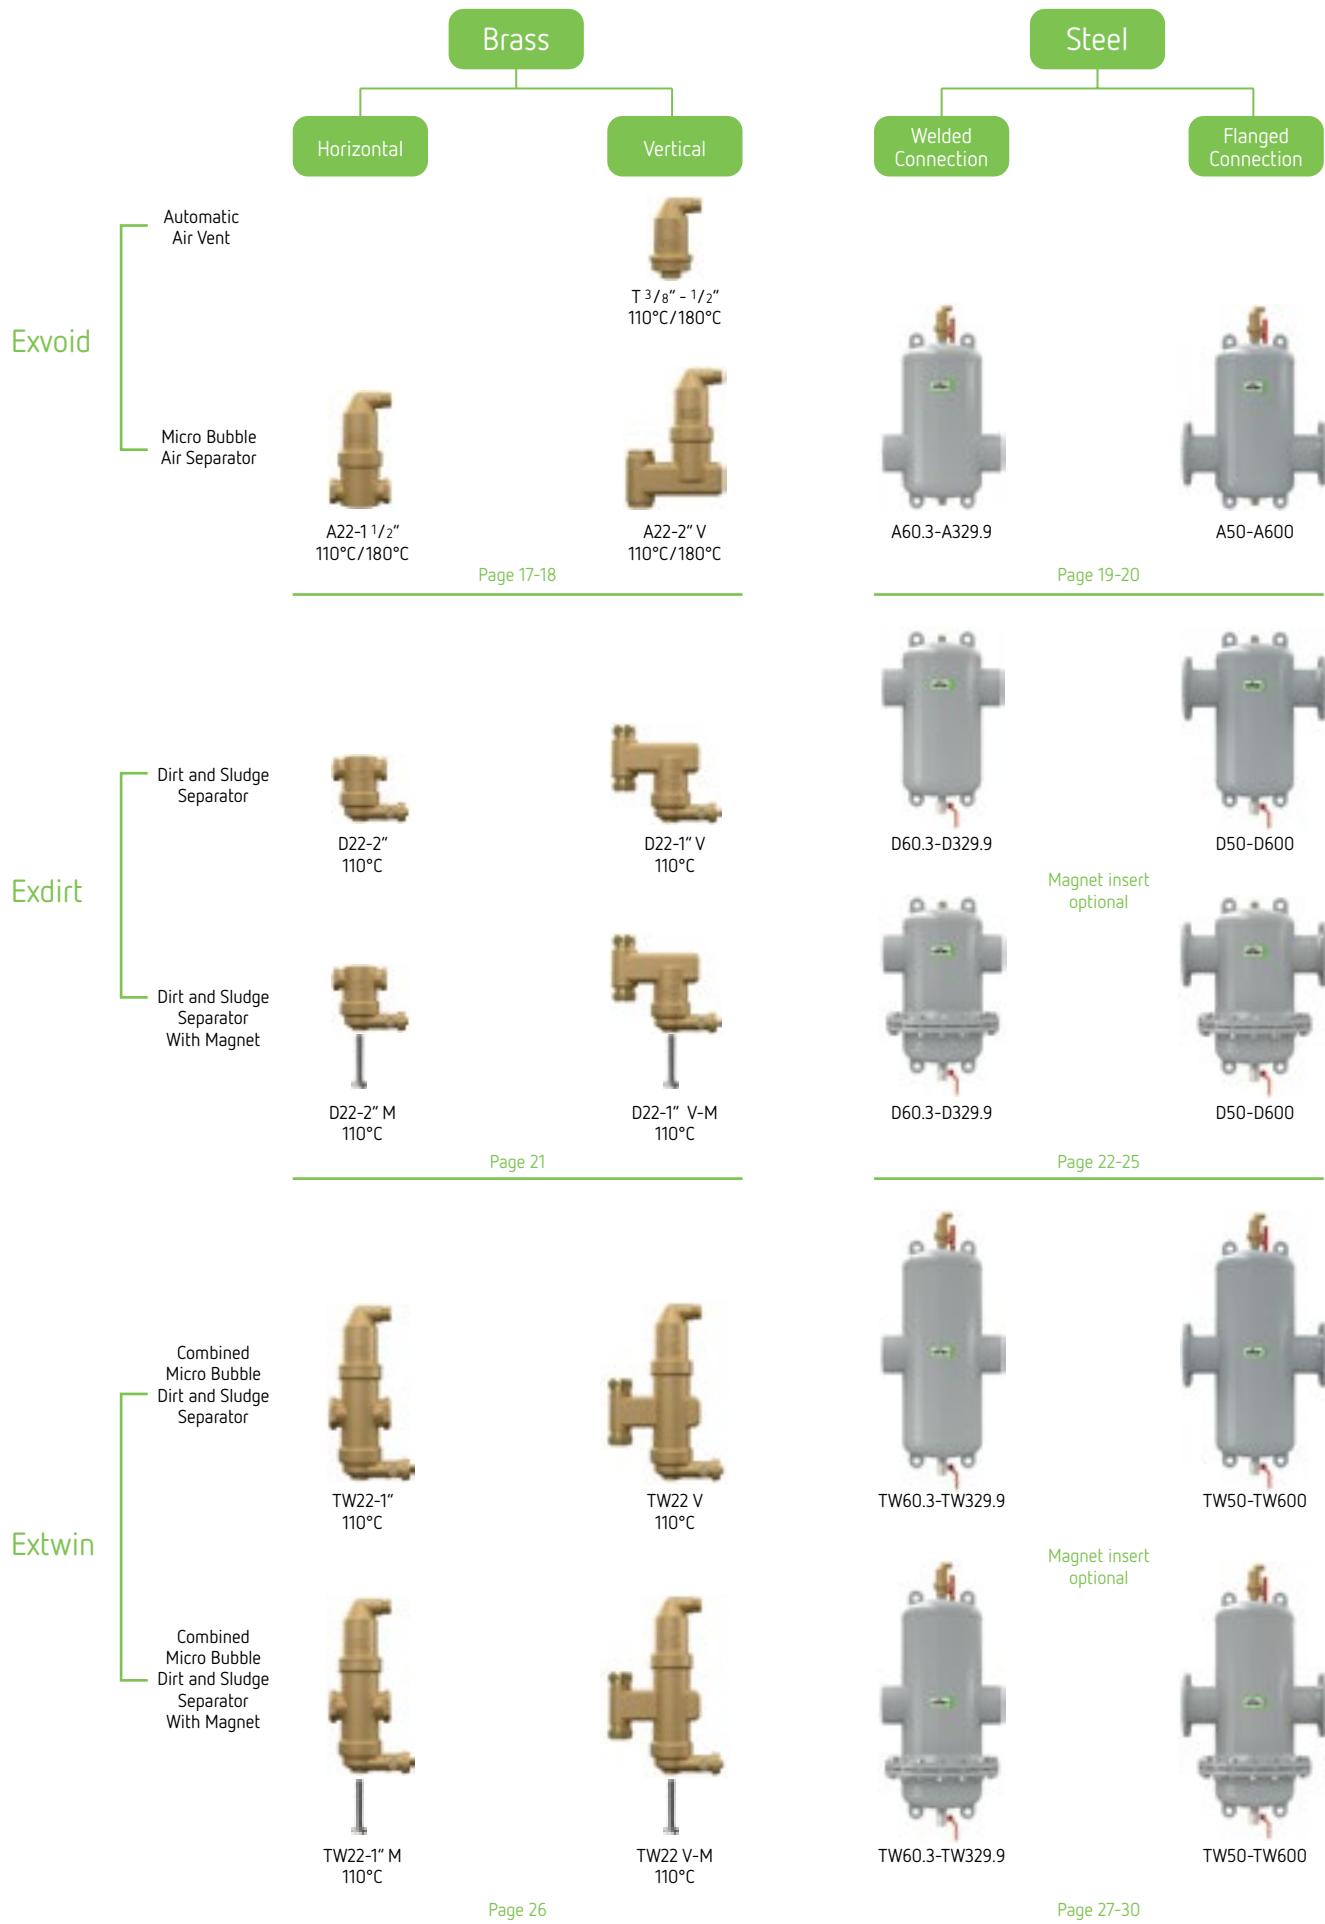

Vacuum deaerators

Can reduce the overall gas content almost to zero. They combat corrosion (reactive gases) as well as erosion (inert gases). High degrees of separation are achieved using dynamic vacuum deaerators.

Separation Technology

Deaeration Systems & Separation Technology

Exvoid T

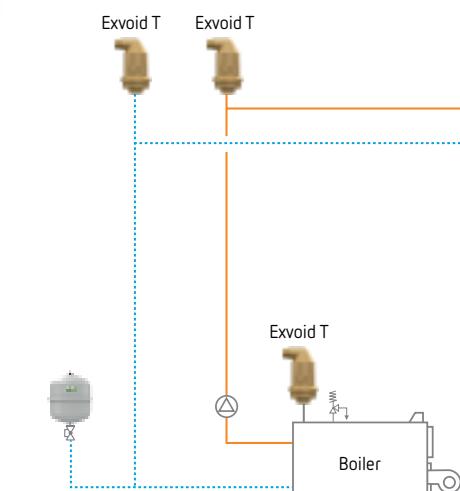

Overview

- Brass casing
- Multiple testing procedure on the deaeration valve
- Vertical installation
- Rp 1/2 system connection and a G 1/2 connection thread on the deaeration valve
- Application limits 110 / 180°C and 10 bar

Exvoid T Function Diagram

Exvoid T system air venting sketch

Exvoid T Automatic Air Vent

Fields of application

The automatic air vent in the reflex Exvoid T series is an ongoing and effective way of removing air and other gases from heating, solar, and cooling systems, including under constant operating conditions, in filling processes after having emptied the system, and in new installations. The vents are applied at high points within the system or at specially identified collection points

Mode of operation

In order to ensure ongoing safe and automatic operation, Reflex Exvoid T automatic air vents follow a sound engineering design formula: Gases collect in a generously sized chamber. This causes the water level in the chamber to drop and a float to fall, which opens the deaeration valve once it reaches a certain depth. The combination of a multiple-tested valve and a generously sized air chamber ensures flawless operation, even in extreme pressure fluctuations

T, brass
• 110°C 10 bar

|----------------|------------|-----------|----------------|--------------|--------|--------|
| Exvoid T 1/2 S | 9250600 | 0.7 | 82 | G 1/2 female | 63 | 120 |

Benefits in brief

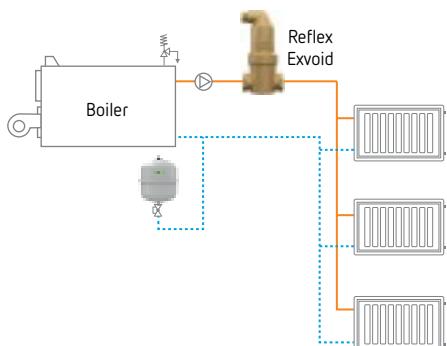

- Reliable, automatic deaeration
- Reduces flow noise, circulation problems, drop in performance and helps to avoid corrosion damage
- Optimum function reliability, even in tough conditions
- Reduces maintenance requirements
- Suitable for a variety of temperatures and applications

Exvoid

The core element is a tube mesh construction that has proven itself over the decades, with an extremely low rate of pressure loss in the flow direction and a high rate of pressure loss in the transverse direction. This drastically reduces the amount of turbulence and guides the gas bubbles to a part-stabilized area.

Volumetric flow:
1.25 - 8 m³/h

Exiso thermal insulation:

Exvoid

Because micro-bubbles are carried along by the flow, special measures are required in order to remove them from the system efficiently. The casings of Reflex Exvoid micro-bubble separators have a larger cross-section than the connection dimensions, which reduces the flow speed in the separator. At the same time, the volume flow is guided by a special wire mesh. The ensuing turbulence causes gas bubbles to move in an undetermined direction. Depending on the volume flow, density, and volume of the particles, parts of these gas bubbles are supported in their natural breakaway motion and removed from the system via the deaeration top section

Overview

- Connection: DN 50 - DN 600
- Volumetric flow: 12.5 - 1530 m³/h

¹⁾ Thermal insulation available

Benefits in brief

- Removes free circulating air and gas bubbles
- Robust heavy gauge steel construction
- Functions in fully automated, continuous operation
- Produces just a minimal, constant drop in pressure
- Enables much faster hydraulic balancing after filling processes
- Prevents development of noise, wear through corrosion, and loss in performance through the formation of larger air bubbles
- Full range in terms of operating pressures, temperatures, and materials

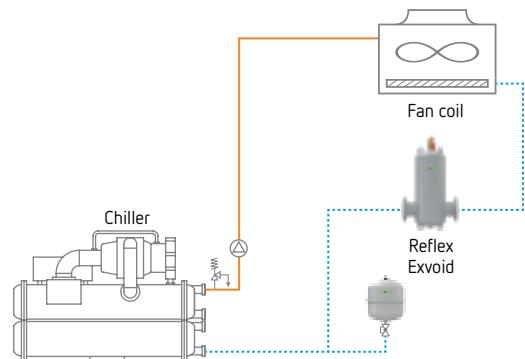

Exvoid HC

Because micro-bubbles are carried along by the flow, special measures are required in order to remove them from the system efficiently. The casings of Reflex Exvoid HC micro-bubble separators have a larger cross-section than the connection dimensions, which reduces the flow speed in the separator. At the same time, the volume flow is guided by a special wire mesh. The ensuing turbulence causes gas bubbles to move in an undetermined direction. Depending on the volume flow, density, and volume of the particles, parts of these gas bubbles are supported in their natural breakaway motion and removed from the system via the deaeration top section.

Overview

- Connection: DN 50 - DN 600
- Volumetric flow: 25 - 3000 m³/h

Benefits in brief

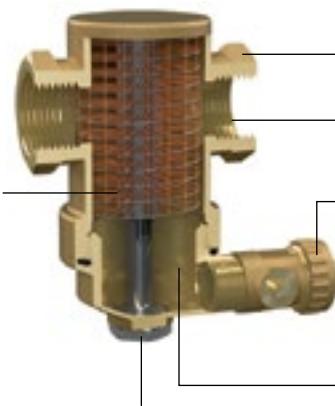

- Removes free circulating air and gas bubbles
- Functions in fully automated, continuous operation
- Produces just a minimal, constant drop in pressure
- Enables much faster hydraulic balancing after filling processes
- Prevents development of noise, wear through corrosion, and loss in performance through the formation of larger air bubbles
- Full range in terms of operating pressures, temperatures, and materials
- Specially designed for bigger systems with longer heights and higher volumetric flow

Exdirt

The core element is a tube mesh construction that has proven itself over the decades, with an extremely low rate of pressure loss in the flow direction and a high rate of pressure loss in the transverse direction. This drastically reduces the amount of turbulence and guides the sludge particles to a part-stabilized area

Volumetric flow:
1.25 - 8 m³/h

Exiso thermal insulation:
DN 20 - DN 40 and 2"

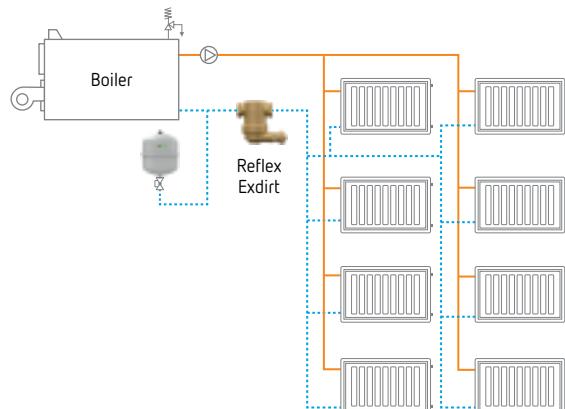

Magnetic insert
Suitable for M models

Several connections are available from A22 to 2"

Through flow is not impeded by sludge

Space-saving, perpendicular draining tap. The collected sludge is quickly and forcefully pressed out when the tap is opened so that it can be closed again right away. The entire process takes just a few seconds

The capacity to capture large amounts of sludge results in longer intervals before cleaning becomes necessary

¹⁾ Thermal insulation available

Benefits in brief:

- Removes free circulating dirt and sludge particles < 5 micrometer
- Functions in fully automated continuous operation, produces just a minimal constant drop in pressure
- Maintenance takes just 5 seconds Permanent free throughflow opening for the water
- No shut-off valves or bypass lines required. Desludging possible during system operation
- Full range in terms of operating pressures and materials
- Continually ensures flawless functionality of heat generators, thermostat valves, etc.
- Reduces the risk of system defects and breakdowns in the long term

Exdirt R

The sludge/dirt separation in the Reflex Exdirt R works on a similar principle to micro-bubble separation: The flow is guided through an area with a greater cross-section than the connection dimensions in order to reduce the flow speed. The ensuing turbulence caused by the tube mesh causes heavy materials to move in an undetermined direction. Depending on the volume flow, density, and volume, parts of these sludge particles are supported in their natural breakaway motion and guided to the bottom section of the casing.

¹⁾ Thermal insulation available

Benefits in brief:

- Removes free circulating dirt and sludge particles < 5 micrometer
- Functions in fully automated continuous operation, produces just a minimal constant drop in pressure
- Maintenance takes just 5 seconds Permanent free throughflow opening for the water
- No shut-off valves or bypass lines required. Desludging possible during system operation
- Full range in terms of operating pressures and materials
- Continually ensures flawless functionality of heat generators, thermostat valves, etc.
- Reduces the risk of system defects and breakdowns in the long term
- Easier maintenance due to detachable base

Exdirt HC

The sludge/dirt separation in the Reflex Exdirt HC works on a similar principle to micro-bubble separation: The flow is guided through an area with a greater cross-section than the connection dimensions in order to reduce the flow speed. The ensuing turbulence caused by the tube mesh causes heavy materials to move in an undetermined direction. Depending on the volume flow, density, and volume, parts of these sludge particles are supported in their natural breakaway motion and guided to the bottom section of the casing. Specially designed for bigger systems with longer heights and higher volumetric flow.

Extwin

The core element is a tube mesh construction that has proven itself over the decades, with an extremely low rate of pressure loss in the flow direction and a high rate of pressure loss in the transverse direction. This drastically reduces the amount of turbulence and guides the sludge particles to a part-stabilized area

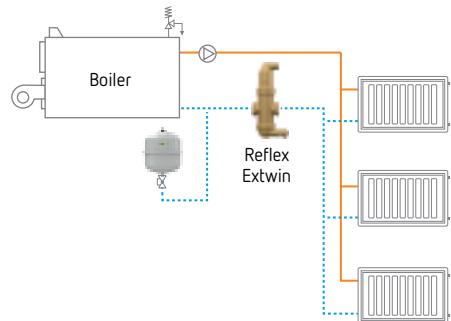

The capacity to capture large amounts of sludge results in longer intervals before cleaning becomes necessary

Non-leak, non-shut-off deaeration valve
Air chamber with special design: driving impurities do not reach the deaeration valve; high air chamber volume to counteract pressure fluctuations

Several connections are available from A22 to 1"

Space-saving, perpendicular draining tap. The collected sludge is quickly and forcefully pressed out when the tap is opened so that it can be closed again right away. The entire process takes just a few seconds

Extwin "brass" system combined micro-bubble, dirt and sludge separation sketch

Overview

- Dimension-dependent brass designs
- Installation: horizontal, vertical
- Connection options: thread and clamping ring
- Connection diameter A22 - 1"
- Max. operating pressure: 10 bar
- Max. operating temperature 110°C

Benefits in brief

- Removes free circulating dirt and sludge particles
- Functions in fully automated continuous operation
- Maintenance takes just 5 seconds
- Permanent free throughflow opening for the water
- No shut-off valves or bypass lines required. Desludging possible during system operation
- Full range in terms of operating pressures and materials
- Continually ensures flawless functionality of heat generators, thermostat valves, etc.
- Reduces the risk of system defects and breakdowns in the long term

Benefits in brief

- Combines the protective functions of Reflex Exvoid and Exdirt in a single component in chilled water systems
- Single installation, doubled effect
- A far more cost-effective solution than using both the individual components
- Full range in terms of operating pressures and materials

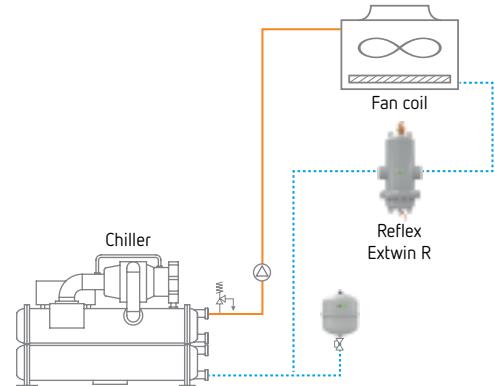

Extwin R

The reflex Extwin combines the modes of operation of the Exvoid and Exdirt, the principle corresponding with the functionality set out on pages 18 & 21

Overview

- Connection: DN 50 - DN 600
- Volumetric flow: 12.5 - 1530 m³/h
- Exiso thermal insulation: DN 50 - DN 125

Benefits in brief

- Combines the protective functions of Reflex Exvoid and Exdirt in a single component in chilled water systems
- Single installation, doubled effect
- A far more cost-effective solution than using both the individual components
- Full range in terms of operating pressures and materials
- Easier maintenance due to detachable base

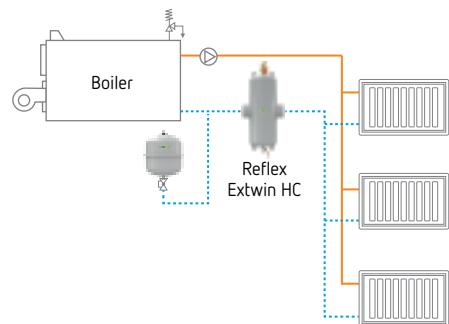

Extwin HC

The Reflex Extwin HC combines the modes of operation of the Exvoid and Exdirt, the principle corresponding with the functionality set out on pages 18 & 21. Specially designed for bigger systems with longer heights and higher volumetric flow.

Overview

- Connection: DN 50 - DN 600
- Volumetric flow: 25 - 3000 m³/h

Benefits in brief

- Combines the protective functions of Reflex Exvoid and Exdirt in a single component in chilled water systems
- Single installation, doubled effect
- A far more cost-effective solution than using both the individual components
- Full range in terms of operating pressures and materials
- Specially designed for bigger systems with longer heights and higher volumetric flow
- Easier maintenance due to detachable base

Reflex EB Dirt Collector

- Separates and collects dirt (magnetite, welding grid, sand etc.) from the systemwater
- Protects and improves average lifetime of components (pumps, valves, heat exchangers etc.)
- Minimum pressure drop
- Meets or exceeds EC norms for pressure vessels 97/23/EC
- Durable epoxy coating with attractive new colour

Reflex LA Air Separator

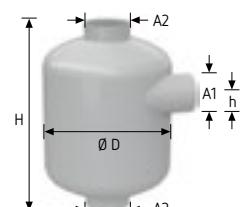

- Separates gas bubbles (air, nitrogen etc.) from heating and cooling systems
- Increases system efficiency and average lifetime of components
- Minimum pressure drop
- Most suitable for rooftop plantrooms at low pressure
- Welded collection
- Durable epoxy coating with attractive new colour

Reflex T Expansion Trap

- Separates water from steam in heating installation $\geq 100^\circ\text{C}$
- To be connected to the safety valve according to DIN EN 12828
- Allows evaporation without danger to the ambience
- Durable epoxy coating with attractive new colour

Pressure loss calculation for all volume flows

$$\Delta p = \left(\frac{\dot{V}}{kvs} \right)^2 \times 1 \text{ bar}, \dot{V} \leq \dot{V}_{\max}$$

Example:

Heating circuit 70/55°C, heat generator output 40 kW

Volume flow calculation

$$\dot{V} = \left(\frac{40 \text{ kW}}{4.2 \text{ kJ / (kg K)} \cdot (70-55) \text{ K}} \right) \times 3.600 \frac{\text{s}}{\text{h}} \times \frac{1 \text{ m}^3}{1.000 \text{ kg}} \\ = 2.3 \text{ m}^3/\text{h} \rightarrow \text{selected size Rp } 1 1/4$$

$$\Delta p = \left(\frac{2.3 \text{ m}^3/\text{h}}{31.8 \text{ m}^3/\text{h}} \right)^2 \times 1 \text{ bar} = 5.23 \times 10^{-3} \text{ bar} \\ = 0.53 \text{ kPa}$$

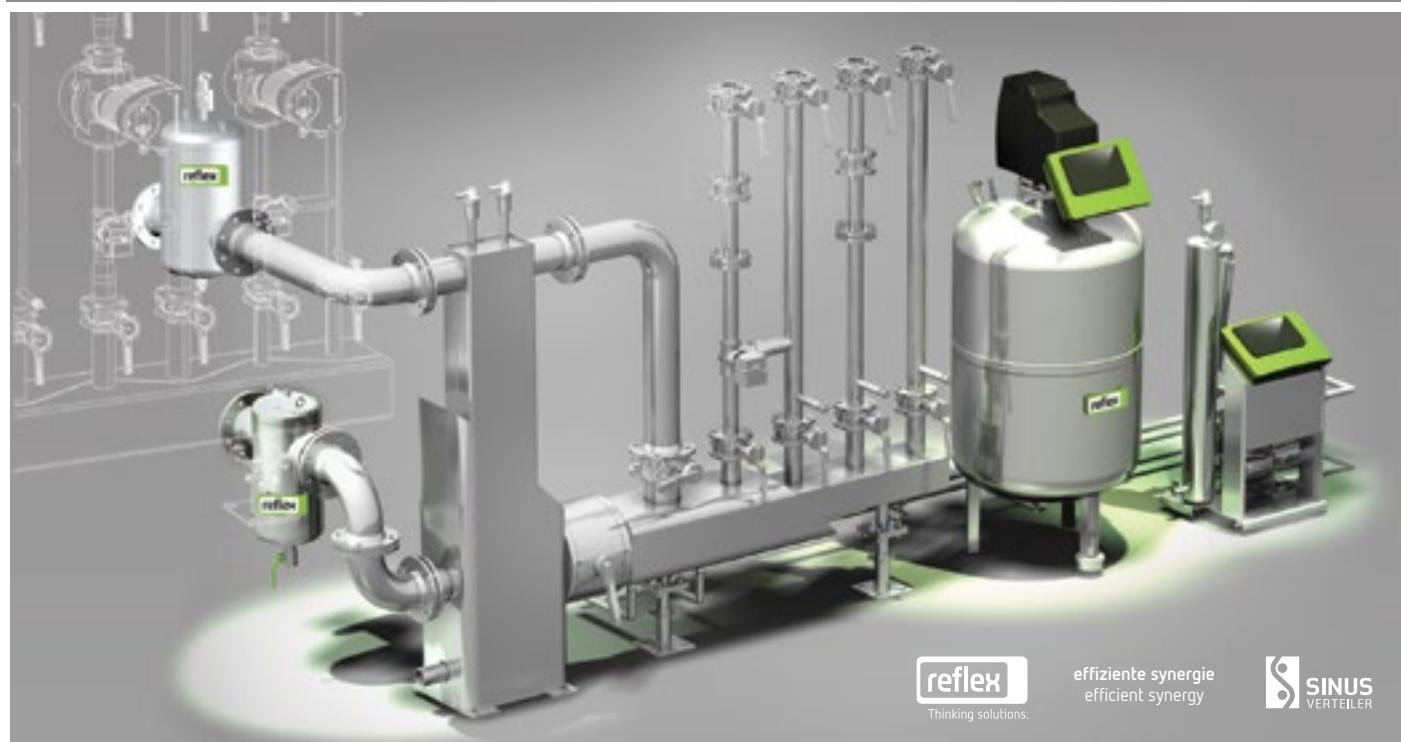

Notes

Reflex & Sinus Efficient Synergy

WHEN THE BEST COME TOGETHER IT, BECOMES HOT

The combination of both product lines in thousands of projects has proven the efficient synergy. Since the arrival of Sinus verteiler into the Winkelmann company family complementary products and system solutions from one stop service offer true benefit for the industry. We are looking forward discussing new possibilities for smart heating or cooling systems which will enlarge your horizon.

Tailor Made Solutions

Solution: Servitec special systems

These systems operate in the same way as standard Servitec systems but their design underlines their extraordinary performance. Servitec special systems represent a genuine alternative to thermal degassing units and are also capable of degassing the make-up water directly. An installation like this essentially needs to be coordinated with professional experts on the operational side.

The Reflex brand name is well known in Europe and throughout the world as a major leader in pressure control technology for heating, chilled and potable water applications. Our world wide growth has allowed us to build several state-of-the-art manufacturing facilities supplying the industry with outstanding quality products. Reflex Winkelmann GmbH having its headquarters in the Westfalian city of Ahlen is not only a recognized leader in expansion vessels but also a significant manufacturer of advanced system solutions such as compressor and pump-controlled pressurisation systems, automatic air separation systems and hot water heaters.

Reflex has achieved its significant global growth today thanks to the unique combination of its world-class manufacturing skills, dedication to high-product quality at an affordable price and its commitment to continuous technical training of its people, our most precious resource. Our tradition goes back to 1898. This family oriented company started its core business in the elaboration of steel. A business in which we are recognised leaders today. The Heinrich Winkelmann Group form the parent company to a whole group of diversified manufacturing companies serving the heating segment and the whole automotive industry with over 4.200 employees. A tradition of more than a hundred years in this business makes us real experts today.
