### 1. Risk Management and Knowledge Management

### 1.1 The Necessity of Risk Management

The German Law on Control and Transparency in Organizations (KonTraG) provides that the legal representatives of stock corporations must set up an effective and functional internal control system in order to detect developments early on that threaten the continued existence of the company. The obligation to control and organize must be understood group-wide for multi-level companies (e.g. parent companies and their subsidiaries) if the subsidiaries pose a risk to the group of companies.

#### 1.2 fr\_risk\_management\_system

The fr\_risk\_management\_system is tailored to the needs of small and medium-sized businesses (SMB). The fr\_risk\_management\_system aims to optimize the standard business of SMBs to the extent that the requirement for legal advice is reduced, and to allow focus on individual circumstances, contracts and projects for which standard solutions are not recommended.

### 1.3 Knowledge Management as a Module of Risk Management

Rapid globalization and the development of society into a "knowledge society" necessitate company-wide knowledge management. The fr\_risk\_management\_system offers SMBs a systematic start to creating knowledge management. Users are able to effectively access knowledge on a common level using different media (e.g. for employees: CD-ROM; within the company: Intranet). Since company cultures (particularly various company units with opposing cultural dimensions<sup>1</sup>) present a key factor for knowledge management, globally active companies must aim to organize and actively maintain inter-cultural knowledge management.

See Marion A. Weissenberger-Eibl and Patrick Spieth: Intercultural Co-operation: A Consequence of Cultural Constraints in Managing Knowledge, Special Edition 2006

**1.4** The Difference between Knowledge Management and Document Management For knowledge management to be effective, it is crucial to differentiate between knowledge and document management. This is demonstrated in the following:

| Knowledge Management (KM)  | Document Management (DM)  |
|--|---|
| <ul> <li>Only data with repetition<br/>character that is relevant for<br/>knowledge</li> <li>Know-how bundling</li> <li>Untilization of Synergies</li> <li>Distribution and control of<br/>core competence knowledge</li> <li>Systematic structure of<br/>knowledge</li> </ul> | <ul> <li>Communication</li> <li>Administration</li> <li>Drafts</li> <li>Development</li> <li>Document flow</li> <li>Retrieval</li> <li>Archiving</li> </ul> |

### 2. fr\_digital\_knowledge\_management (fr\_dkm<sup>™</sup>)

### 2.1 Target Group

fr\_digital\_knowledge\_management (fr\_dkm<sup>™</sup>) was developed by F+R as a knowledge management tool for SMBs. It has been successfully implemented in several companies; however, it is also suitable for use by members of the consulting professions (e.g. lawyers, tax advisors, auditors) and universities (e.g. academic departments).

Examples from practice:

| fr_dkm <sup>™</sup> Application                       | Description   |
|---|---|
| Corporate Documents                                   | Administration of contracts necessary for the company group (parent company and subsidiaries) according to company law  |
| Contract Administration                               | Administration of complex contracts which<br>include graphics detailing the contractual<br>structure (annexes, addendums), e.g. industrial<br>plant contracts |
| Environment and Occupational<br>Health and Safety Law | Administration of documents concerning<br>environmental law (e.g. provisions, permits,<br>reports, technical specifications)                                  |
| Retirement Funds                                      | Contracts and documents concerning the company group's retirement plan  |

| fr_dkm <sup>™</sup> Application | Description  |
|---------------------------------|--|
| Arbitration Proceedings         | Effective administration of documents during<br>arbitration proceedings with secured online access<br>for participants     |
| Court Proceedings               | Effective administration of written statements and experts' reports in complex court proceedings                           |
| Claim Management                | Effective administration of complex claims by<br>organizing the relevant documents and allocation<br>of the defined claims |

### 2.2 Functions

fr\_digital\_knowledge\_management enables effective administration of complex contracts and documents and, in addition, creates the potential for greater efficiency. This can be achieved as demonstrated in the following:

Graphics which detail contractual structures (e.g. contracts with annexes)

Effective filing and retrieving of documents with know how and other relevant company knowledge

Indexed full text search and attribute based search in various formats, e.g. Word (.doc), Portable Document Format (.pdf), web pages (.html)

Authorization concept related to users and documents

Integrated appointment management with email information function

Customizing with free configurable document types and attributes

German and English user interface available at the user's option

"Skills databases" for special areas, e.g. customer contracts, sales contracts (international), technical documentation, corporate contracts, retirement plans, environmental and security law, etc.

The following screenshot shows the fr\_dkm<sup>™</sup> contract database which administers complex contracts regarding industrial issues:

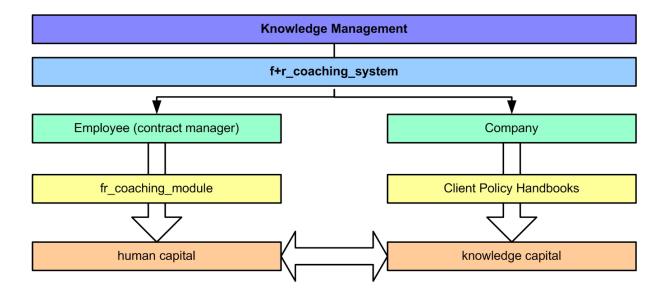

| 🗿 fr_dkm: Industrieanlagen-Vertrag - Microsoft Internet Explorer  |                                       |      |            |  |  |

#### 3. fr\_coaching\_system

#### 3.1 Target Group

The fr\_coaching\_system provides companies and their employees with structured knowledge management. At each of the various modules (levels 1 – 4), employees gain basic knowledge about contract design, contract structure and contract administration. In addition, employees access a knowledge base to assist their daily work within the company. This enables employees to intelligently and independently fulfill about 80% of their contract based work with a high level of quality (therefore reducing risk for the company).

Use of the fr\_coaching\_system within companies transfers knowledge management into "human capital" and/or "knowledge capital" as is demonstrated in the following:

### 3.2 fr\_coaching\_module

The fr\_coaching\_system comprises several fr\_coaching\_modules (levels), which are structured according to the issues typically encountered by SMB employees:

| CISG                           | IT Contracts                             |
|--------------------------------|--|
| Contract Conclusion / GTC      | Supply Business                          |
| Purchasing                     | Legal & E-Business                       |
| Antitrust Law (Germany and EU) | Arbitration (national and international) |

These fr\_coaching\_modules are systematically structured from basic know-how (level 1) to excellence (level 4):

# 3.2.1 fr\_coaching\_basic

In this coaching module, the necessary basics are prepared which an employee must observe when undertaking the design, structure and conclusion of contracts with third parties. Particular areas of importance and interests (e.g. Sales, Purchasing) are not decisive at this stage. The basic module focuses on the implementation of relevant Terms and Conditions and the transmission of the basics of content control of these Terms and Conditions. In addition, common contract regulation issues are explained.

### 3.2.2 fr\_coaching\_advanced

Building on this, the fr\_coaching\_advanced tool is more specialized and much more detailed. It is essentially structured like a contract of sale. In addition, this fr\_coaching\_module contains necessary basic knowledge about special rights and obligations which result from the German Commercial Code and from requirements for contracts which are concluded based on CPB/RPS.

### 3.2.3 fr\_coaching\_top

The goal of this fr\_coaching\_module is to systematically deepen and examine the knowledge transfer from the coaching's first two levels. At the same time, learning about the company's specific requirements is intensified; clear requirements are set and questions are asked regarding the company's everyday work. The coaching module fr\_coaching\_top is characterized in such a way that implementation of Terms and Conditions of Sale and the company's standard contracts are examined in the form of workshops involving the company's employees (role play). In doing so, argumentation aids, strategies and risk-minimizing approaches are developed and trained, e.g.:

Reaction to contradictory Terms and Conditions of Sale or rejection of other parties' Terms and Conditions of Sale

Contract change management: typical requests for amendments by contract partners in view of individual clauses (liability, arbitration, etc.) and the presentation of negotiation aids (e.g. for limitation of liability clauses))

Advantages of arbitration proceedings over traditional court proceedings

Application area and application problems of the CISG in international contracts of sale

Claim Management: strategic analysis and dealing with requirements by the use of knowledge management tools.

In addition, mock-cases (simulated case studies from every day experience by SMBs) are developed based on the typical application areas of the respective company. With the tutor's support and his/her instructions, employees learn to solve issues raised in the mock-cases using the CD-ROMs \_basic and \_advanced.

### 3.2.4 fr\_coaching\_excellence

The final module, fr\_coaching\_excellence, is primarily intended for use by management. This fr\_coaching\_module provides management with information regarding:

A compliance program and code of conduct

Antitrust law (e.g. trade block exemption regulation)

Competition law

Advertising law (Internet)

IT law

Law & E-Business (i.e. introduction to E-Business for SMBs)

### 3.2.5 Amount of Time Required

When implementing the fr\_coaching\_modules, F+R's experience is that employees are willing to undertake a substantial portion of the classes after work. This is because these classes also increase their individual knowledge and this remains with them even if they leave the company.

### 3.2.6 Certificate

At the end of each fr\_coaching\_module, employees who achieve the coaching goal will receive a certificate:

| Risk Management Certificate  |  |  |
|--|--|--|
| Mr. Andreas Mustermann   |  |  |
| attended Management Coaching   |  |  |
| on 13 March 2006 and 20 April 2006   |  |  |
| Risk Management – Concluding Contracts   |  |  |
| The candidate's participation and attendance, plus independent use of<br>the Client Policy Handbooks have enabled an increased knowledge in<br>this area. The candidate passed the tests in the f+r_elearning_tool with<br>a score of more than 75%. |  |  |
| The content of the Client Policy Handbooks appears on the other side of this Certificate.  |  |  |
| Nuremberg, the 22. April 2006  |  |  |
| Foerster+Rutow<br>Rechtsanwälte  |  |  |

# 3.3 Tools of the fr\_coaching\_modules

fr\_coaching\_modules have a uniform user interface which, together with the navigation bar developed by F+R, facilitates simplified navigation and direct access to the tools introduced below.

### 3.3.1 fr\_elearning\_tool / Evaluation

The fr\_elearning\_tool provides the employee with effective control over his/her own learning speed and his/her own learning success. Each employee can choose between three modes depending on his/her knowledge level and learning progress; from controlling the learning process and the possibility to immediately look something up (1st module) to the comprehensive test under time pressure (3rd module). He/she is thereby supported by an accompanying long-term statistic for each chapter of any fr\_coaching\_module. The fr\_elearning\_tool is also used for the evaluation of the respective fr\_coaching\_module and it enables an online evaluation of each employee's test result.

#### 3.3.2 Clauses

The fr\_coaching\_modules have clauses in German and in English for each relevant subject (e.g. Boilerplates). The employee is able to make a qualified choice when designing or commenting on a contract supported by explanatory texts. In the event that he/she has to evaluate a contract draft, he/she is able to recognize and evaluate risk-changing amendments or omissions by comparing it to the clauses provided in the module. The employee is able to choose the clause and mark it, copy it and paste it into his/her Word document.

### 3.3.3 Checklists

The checklists serve the purpose of helping the employee to systematically analyze the facts which need to be settled in the contract at hand. Using these checklists, the employee quickly understands the minimum requirements and settlement demands of decisive clauses, e.g. an arbitration clause. Thus, the employee is capable of evaluating the content of an arbitration clause.

### 3.3.4 Glossary

The glossary helps the employee and gives him/her the possibility to understand any contractual terms he/she does not know. By clicking on a link in the text, the user is directly led to the definition in the glossary and/or back to the text again.

#### 3.3.5 Search Function

An intelligent search function searches the complete content of the CD-ROM. From the search result, the user is directly linked to the passage in the text.

#### 3.3.6 Interactivity

fr\_coaching\_modules are interactive. When clicking on the navigation bar, an internet window opens, via which an e-mail can be sent to F+R. Thus, inquiries can be centrally answered and administered by F+R. The results of the inquiries are evaluated and, if applicable, integrated into the respective fr\_coaching\_module for improvement or add-ons.

### 3.3.7 Links

fr\_coaching\_modules, being digital media, make work very effective since the complete content is connected by hyperlinks, among others:

From chapter to chapter

From terms to glossary

From section referrals to the respective legal text

From case and legislation references to the full text of such

Directly to the Internet, insofar as the computer is connected to the Internet

### 3.3.8 Language

Particularly for foreign subsidiaries of SMBs, F+R has developed a specific and slim version of the fr\_coaching\_system which focuses on the needs of the respective subsidiary and its local legal system. The functionality of the fr\_elearning\_tool is available in the respective language.

Because of its employee structure, F+R is able to provide these products to companies in the following languages:

| German | English | Spanish | Dutch |
|--------|---------|---------|-------|
|--------|---------|---------|-------|

### 3.4 Client Policy Handbooks (CPH)

### 3.4.1 Short Description

Client Policy Handbooks are compact, digital handbooks which are tailored to the individual needs of the respective company, parts of the company or their subsidiaries. They are based on the same digital platforms as the fr\_coaching\_modules and have a uniform user interface with F+R navigation bar which enables simple navigation and direct access to the tools:

Clauses which can be inserted in a contract document via drag and drop.

Checklists for the extensive adaptation of circumstances.

Glossary which explains (legal) terms.

Search function with which the complete handbook may be browsed.

Interactivity by inquiries/answers via email to F+R.

fr\_elearning\_tool to efficiently control the knowledge gained.

Extensive and linked compilation of legislation which makes complicated research for relevant laws unnecessary.

### 3.4.2 fr\_client\_policy\_handbook Organization and Infrastructure

This Client Policy Handbook describes the organization and infrastructure of a company and the respective guidelines. Within the scope of the organization and infrastructure it is ensured that subsidiaries basically work according to the same rules as their parent company and also represent themselves in the same manner. This applies in particular for subsidiaries that usually operate many thousands of miles away from their parent companies. This is an essential component of a corporate identity concept which does not only extend to a common logo.

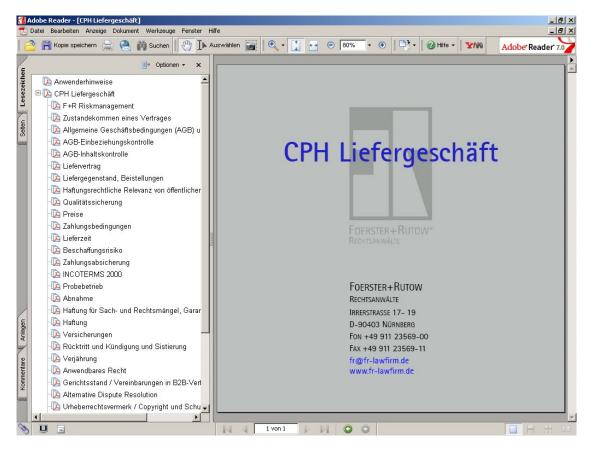

### 3.4.3 fr\_client\_policy\_handbook Contracts and Risk Management

This Client Policy Handbook describes the basic knowledge which the management of a medium sized company must know in order to prevent risk in connection with contract conclusions. This mainly comprises questions regarding the effective inclusion of GTCs and their material validity.

#### Examples:

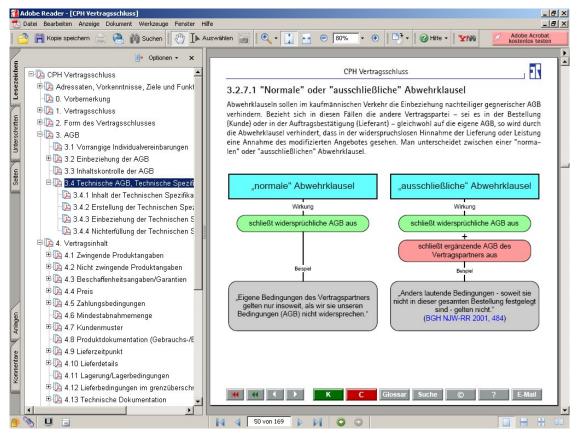

fr\_client\_policy\_handbook Contract Conclusion (CPH Vertragsschluss) fr\_client\_policy\_handbook Supply Business (CPH Liefergeschäft) fr\_client\_policy\_handbook Purchasing

#### Screenshot CPH Supply Business:

#### Screenshot CPH Contract Conclusion:

Let's take for example a subsidiary in Australia: In these CPHs, one can systematically process and summarize the minimum contractual knowledge about Australian law which an employee might need on-site to fulfill his/her tasks:

| Datei Bearbeiten Anzeige Dokument Kommentare Werkzeuge   |   |
|--|---|
| ILKA Client Policy Handbook II: Supply, Con <sup>™</sup>   | Formation of a Contract   |

# 3.4.4 fr\_client\_policy\_handbook Standard Solutions

In a third field, "Standard Solutions", the contractual products of a foreign subsidiary are identified and then incorporated into the uniform corporate identity of the respective company. Usually this leads to the number of contracts being systematically reduced by utilizing the synergies. Insofar as it is necessary, commentaries, argumentation aids and alternative clauses will be provided for individual contracts / GTCs. The employees are thus able to independently negotiate contracts within a certain scope which is provided to them. A typical Client Policy Handbook for a foreign subsidiary is split into four areas as developed by F+R:

| Organization, Infrastructure | Operative Business |
|------------------------------|--------------------|
| Strategic Business           | Other Risks        |

# 3.4.5 fr\_client\_policy\_handbook Specific Solutions

This Client Policy Handbook describes the respective guidelines of a company concerning specific topics, e.g. Antitrust Law, E-Commerce, IT-Contracts (B2B), and Compliance Policy.

# 3.5 fr\_tools (fr\_ilm<sup>™</sup>, fr\_glossary)

F+R has further developed a series of tools that are selectively utilized, e.g. fr\_internet\_link\_manager (fr\_ilm<sup>™</sup>) and fr\_glossary (for further tools see http://www.fr-lawfirm.de).

### 3.5.1 fr\_ilm<sup>™</sup>

The fr\_internet\_link\_manager (fr\_ilm<sup>™</sup>) contains a database structure with selected Internet links. Using this tool, employees are able to conduct research on the Internet efficiently. The passages are selected according to the most suitable source. Each source is briefly summarized in regards to access, costs, quality, topicality etc. This database is interactively maintained and enhanced together with the companies using it.

#### 3.5.2 fr\_glossary

Each company should create and administer its own glossary in order to maintain its correspondence, its technical documentation (e.g. technical specification) and its contracts in a uniform corporate identity concept, and in order to reduce possible mistakes. For this, F+R has developed its own fr\_glossary which includes this function plus an effective administration ability. It can continuously be updated to a company specific glossary by an administrator. The technical design makes it possible for the fr\_glossary to be available online via a central input station. The results from the input thus are immediately available to the users on the Internet. The user is able to forward questions and ideas for the inclusion of new terms into the fr\_glossary via e-mail to the central input station.

- 4. Technical Specification
- 4.1 fr\_dkm<sup>™</sup>
- 4.1.1 Short Description

fr\_digital\_knowledge\_management (fr\_dkm<sup>™</sup>) is a web-based application:

Using this tool is possible locally, via Intranet or Internet from different global sites.

Access via Intranet or Internet is possible encrypted via SSL code.

Any document format can be filed. To view the documents, the right application must be installed on the client PC (e. g. Word, Excel, Visio, Adobe Reader).

The data is filed in PostgreSQL Database (Version 8.1). Tomcat 5.5 is used as web server. A modified search engine based on Lucene is used for full text search.

# 4.1.2 System Requirements

|                  | Server  | Client  |
|------------------|---|---|
| Processor        | Pentium III with 800 MHz  |   |
| Hard Drive Space | >200 MB<br>(200 MB for the system<br>+ space for the documents) | Current web browser<br>e.g. Internet Explorer |
| Operating System | Windows 2000, Windows XP<br>Professional or higher              |   |

# 4.2 Client Policy Handbooks (CPH)

# 4.2.1 Short Description

Client Policy Handbooks can be read with the free software Adobe Reader Version 6.0 or higher. Each Client Policy Handbook contains a CD-ROM with an Adobe Reader version which starts automatically. It is thus possible to run the Client Policy Handbook on a computer where Adobe Reader is not installed.

# 4.2.2 System Requirements

| Operating<br>system | Microsoft <sup>®</sup> Windows 98 Second Edition, Windows Millennium<br>Edition, Windows NT <sup>®</sup> 4.0 with Service Pack 6, Windows 2000 with<br>Service Pack 2, Windows XP Professional or Home, Windows XP<br>Tablet PC Edition |
|---------------------|---|
| Work processor      | 32 MB RAM (64 MB recommended)   |
| Web browser         | Internet Explorer Version 6.0 or higher   |

### 5. Conclusion

Complex documents and contracts can be administered in a structured and efficient way with the database fr\_digital\_knowledge\_management. The fr\_coaching\_system provides the employees with basic knowledge in the area of contract design, contract structure and contract administration. In connection with this, the fr\_elearning\_tool serves the purpose of motivation and an objective success control of the learning transfer. In addition, the contents of the fr\_coaching\_modules are provided, together with the Client Policy Handbooks, to employees within the scope of knowledge management on the company's Intranet. Thus, this knowledge management forms part of an extensive risk management system.
