

What a great idea!

linked2pay makes it easy for any business to accept card and e-check for integrated, simplified payments online and by email

Capabilities

Using linked2pay a custom form can be attached to any web site allowing a business to start accepting payments in minutes. The experience for their customer is easier than most online payments in that there is no registration or password required and the payment itself is simplified providing an immediate confirmation and email receipt.

Those forms have the following optional features:

- Field types that can be added include Input Selection, Quantity, Amount, Hidden, Checkbox, Date, Phone, Address Block and Lookup
- Using a Lookup field a customer can enter a unique set of digits (customer ID for example) and pull up their account (one item or a list) to make a payment
- Each listed item can include an attachments that can be password protected
- When payment data is loaded from their accounting software to our form on their web site their customers can get a text message alert that it is ready to pay
- linked2pay forms can be used immediately as a stand alone with full reporting or easily integrated to their accounting software using our Web services
- The integration of linked2pay with an accounting software is a very simple project that can be completed in a day or two

Using linked2pay email offers simplified payments for e-billing and e-coupon applications. And like the payment form the experience for their customer is easier than other payment options and provides an immediate confirmation and email receipt.

Email payment have the following optional features:

- Easy template builder works for a novice or expert to create an e-bill or e-coupon that can range from simple text to image rich HTML
- Contact file imports and variables speak directly to each recipient and is done with ease
- Optional setting per email can include one time or recurring payments, days to pay, total payments accepted (for e-coupons), limit per customer, and convenience fees
- linked2pay emails also support attachments with or with out password protection
- We also have a QuickBooks plug-in so that users can utilize linked2pay from the QB menu

Validations

linked2pay is built upon the transmodus platform which is PCI compliant and has completed a SAS 70 Type II audit. Encryption for linked2pay is EV 256 SSL. Our platform processes billions annually in check and ACH payments for recognized leaders in the financial services industry.
