## **GRAFTED ADENIUMS – COMMERCIAL SIZES**

We sell two basic sizes: Regular and Liners. Both are grafted onto seedling rootstock – we are moving towards using 100% Rootstock Select seedlings which have been specially bred to get fat faster and throw less suckers.

**REGULAR:** These are mature, well branched plants pulled from 13 cm (5.5”) pots – they have two main branches that have been cut back to get more branches. Target weight is 200-225 grams. These plants are all well beyond minimum flowering size.

**LINERS:** These are young grafts shipped 3-4 months after graft union is healed.

We select Liners with two main branches and very well healed graft unions. These are shipped out of 6 cm (2") square pots and are vigorously growing young plants that will take off rapidly once planted. Weight is 75-90 grams.

Most Liners are quite capable of flowering and will flower due to the stress of shipping – it's best to remove these flowers to allow strong vegetative growth in the initial period.

## COMPARISON BETWEEN SIZES:

Below picture gives a good idea of the very substantial difference in size of the two options.
