PRESS RELEASE

KRAFTANLAGEN, THE GERMAN SUBSIDIARY OF BOUYGUES CONSTRUCTION, IS CHOSEN TO MODERNISE THE INFRALEUNA POWER PLANT.

- Extension and modernisation of the InfraLeuna power plant at the Leuna chemical complex.
- Secure energy supply for the Leuna site and development of its energy capacity.
- Kraftanlagen will be responsible for the engineering, construction and commissioning of the entire installation.

Kraftanlagen, a subsidiary of Bouygues Construction in the Energies & Services division, has been chosen by InfraLeuna GmbH to lay the foundations for secure energy supply for the Leuna chemical complex, near Leipzig. The contract is worth more than €100 million for Kraftanlagen. This ambitious project follows on the commissioning in January 2020 of the Kiel coastal power plant, a highly flexible installation and a flagship project for the energy transition.

The modernisation of the existing InfraLeuna power plant will provide a high-performance combined-cycle gas and steam turbine plant, with improved efficiency and flexibility. In addition to the construction of the new combined-cycle plant, the contract includes the connection of the existing gas turbine to the new heat recovery steam generator.

Kraftanlagen will be the general contractor for the entire modernisation project. It will be responsible for the engineering studies, construction and commissioning of the whole plant, including integration of the existing installation.

The modernisation of the combined-cycle plant forms part of Leuna's comprehensive energy concept. It will provide a competitive supply of process steam and electricity for companies installed in the chemical complex near Leipzig, and to increase the site's capacity.

Bouygues Construction is a global player in construction, with operations in more than 60 countries. It designs, builds and operates projects in the sectors of building, infrastructure and industry. As a responsible and committed leader in sustainable construction, Bouygues Construction sees innovation as its primary source of added value: this is "shared innovation" that benefits its customers at the same time as improving its productivity and the working conditions of its 56,980 employees. In 2019, Bouygues Construction generated sales of €13.4 billion.

Christof Günther, CEO of InfraLeuna GmbH, said: "This investment will enable us to optimise the energy supply of the Leuna chemical complex once again and create the right conditions for it to pursue its growth. We are delighted to have Kraftanlagen München GmbH, a skilled and highly regarded general contractor, as our partner."

Technical data for the new combined-cycle power plant:

- Total net power: up to 117 MW
- Process steam flow rate: up to 190 t/h
- Fuel utilisation rate: 84%

About Kraftanlagen:

A subsidiary of Bouygues Construction in its Energies & Services division, Kraftanlagen München GmbH is a multi-speciality partner for industry and the energy and building sectors. In Europe, the company produces and integrates state-of-the-art processes and technical equipment. Kraftanlagen employs over 2,200 people on several sites and offers a broad range of services. It can operate either as a general contractor for major projects or as a specialist in the fields of energy, buildings and industrial installations.
