Dear Ladies and Gentlemen.

Your question regarding a potential impact of the Japanese tragedy:

We have immediately checked the risk exposure of our supply chain to the current disaster situation in Japan. As a result we can confirm that WIMA has neither a single source position nor a direct or indirect dependency on Japanese suppliers with regard to all types of PET and PP raw material used in our capacitors. Therefore we don't see -at least for the time being- any restrictions with regard to our material supply or lead times. Until now we have no alerting information regarding the supply of PPS raw material (for WIMA SMD-PPS series only) which is produced by a Japanese company – however, based on our latest information PPS is produced outside Japan.

But you might understand that we are currently quite concerned about the imminent fate of the Japanese population and (only secondarily) the further development of our business in the Japanese market.

Best Regards/
Mit freundlichen Grüßen
