September 12, 2022 Petition to the Cannabis Compliance Board

Mr. Tyler Klimas
Executive Director
Cannabis Compliance Board
700 E. Warm Springs Rd., Suite 100
Las Vegas, NV 89119

Mr. Klimas,

Pursuant to Nevada Cannabis Compliance Regulation ('NCCR') 10.080, Cannabis establishment: Storage, management and disposal of waste, FUHR Research Laboratories, asks that you please accept this correspondence as a petition to the Board to request an adoption amendment to the current ruling, specifically addressing the waste disposal portion of this regulation.

As of this date, there is not a specific way to dispose of the waste after the grinding, without on site destruction or additional use of a compostable mixed waste. New technology has been developed by my company, that allows for immediate grinded waste to become totally non usable after being sprayed with this technology. This is unique in as much as once ground product is subjected to being sprayed, with this product, it becomes non flammable, non toxic, infused with specific enzymes for accelerated composting to begin & environmentally friendly for the soil. It is considered friendly towards the environment as the treated product is transformed into a repurposed product. Please refer to attached exhibit A

Therefore we respectfully request the Regulation 10.080 be amended to include under item 3 subsection b, subsection 4, other waste approved by Board, "Chemicals that are considered non hazardous, zero VOC (volatile Organic Compounds) non-flammable, oxide free pigments and contain enzymes for accelerated decomposition, black colorant with optical brighteners for inspection markers" may also be used in the waste management controls.

With this amendment, all entities that deal within your govern will benefit with an additional option whether in the cultivation growth, or dealing with outdated inventory.

As a point of reference, Jason Banales, Marijuana Program Supervisor, has been introduced to this products informational data. There are several Cultivator's in Nevada that are already to place orders.

Thank you for your time and considerations:

TURN YOUR WASTE INTO COMPOST
EXCEEDS COMPLIANCE GUIDELINES

After lengthy formulation development, we introduce the only product of its kind, with Patent Pending status, to solve your waste problems . Turn your waste into an enriched compost while meeting all compliance regulations at the same time.

Starting with casein modified protein binder, followed by a bone black pigment from actual animal bones used to enhance the compost properties, the product is black in color for product use recognition. Next we modify the initial composition of the product with food grade and solvent free binder. This then allows the blend to accept a consortium of biochemicals derived from a controlled fermentation process using probiotic cultures and other raw ingredient's that are all 100% biodegradable. Specific enzymes and bacteria are also used to ensure the quick start to the compost decomposition process.

This complex mixture of ingredients that not only accelerate the decay process, but also creates the waste to be a nonflammable substance. With the addition of nitrogen and phosphorous the soil is enriched for regenerative properties.

Other proprietary ingredients round out this superb product to solve waste disposal situations.
