# Preface

Thank you for your interest in the Albert Einstein font.

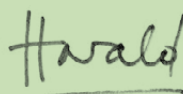

The following document sets out to explain how the Albert Einstein font was made and to convey in detail the relationship of the font to Albert Einstein's handwriting. The hope is to enable you to judge for yourself how related the Albert Einstein font and Einstein's handwriting really are. The document is designed to explain more visually than with words. It focuses more on the methods and ideas—in terms of principles applied in the process—rather than the technical details of their execution.

In order to understand how the font is based on Einstein's handwriting you will be guided step by step through the basic principles of how a letter was created. This is followed by a side by side comparison of a variety of letters taken from the Albert Einstein font, likened and linked to their analog counterparts in Einstein's original manuscripts.

The document concludes with a line by line comparison of two manuscript pages and their transcript set in the Albert Einstein font. This final comparison was used as a benchmark for the development of the font. It allows one to directly compare the quality, character, and variety of the manuscript and font side by side in an all encompassing viewpoint rather than mimicking letter by letter.

In this comparison, I hope to visualize the relations between the font and Albert Einstein's handwriting.

Enjoy,

Handwritten text, possibly a name or title, appearing as a faint, mirrored or ghosted image.

# Movement

The first step is to find out how the writer moved on paper. Looking at the movement that created the form is fundamental to understanding the form of handwriting.

# Original

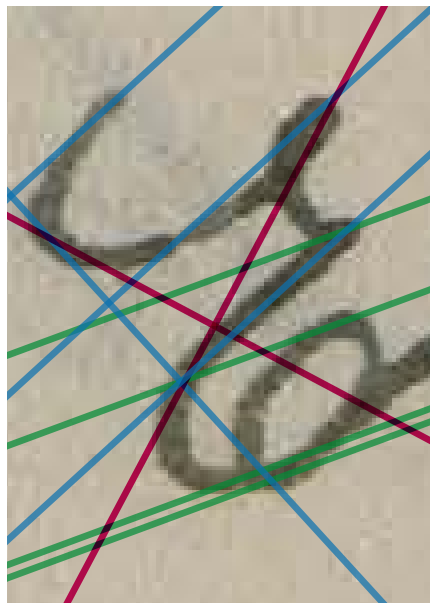

Each letter, number, punctuation mark as well as mathematical sign of the Albert Einstein font is based on an original source found in Einstein's manuscripts.

1

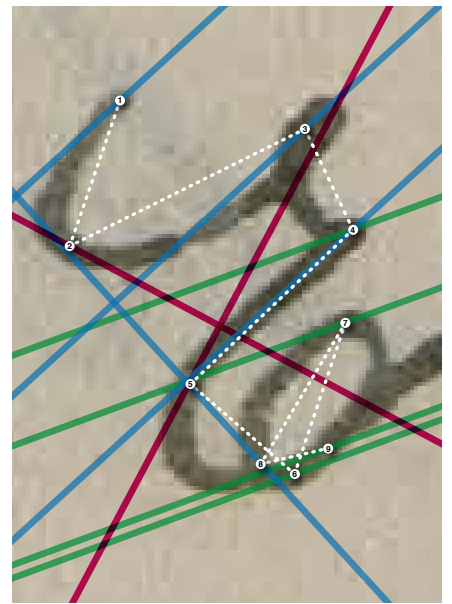

I begin by looking for the movement in the Einstein's hand-drawn letter. My task is to recreate this movement with a vector drawing. This vector will first resemble the path of the movement, as a line or trajectory (2 - 4). Then width is added to the path to create a form in two-dimensions (5).

2

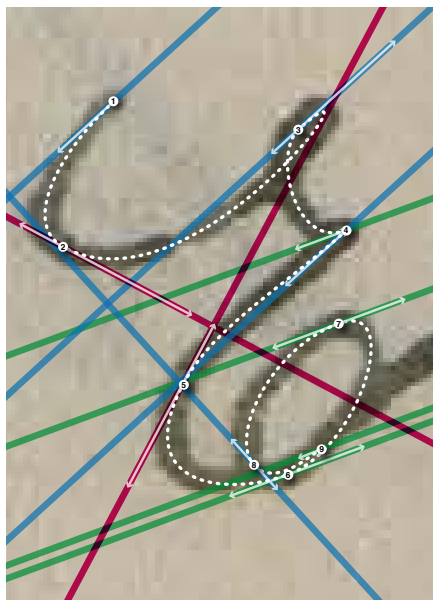

Every writer has their own set of angles that describe the characteristic "tension" of his or her handwriting. Here you see three types of tension guidelines (red, green and blue) aligned around the letter. These guidelines give a specific geometry that is kept consistent throughout the production of the font. The guidelines can also be seen as tangents of the original movement path. These three are also used in 90° rotation.

To convert the letter into a vector drawing, I position these tangents along the drawing where I think a shift in movement happens. At these points I assign a vector point in the next step.

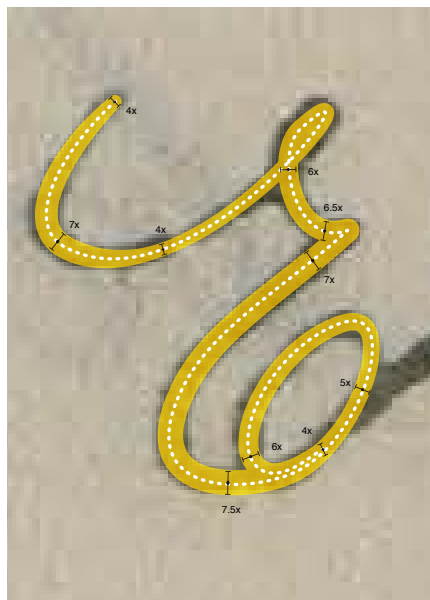

3

Image 3 shows the added vector points (white circles) and the resulting path (white dashed line). The small numbers inside the vector points represent the order in which the points are placed.

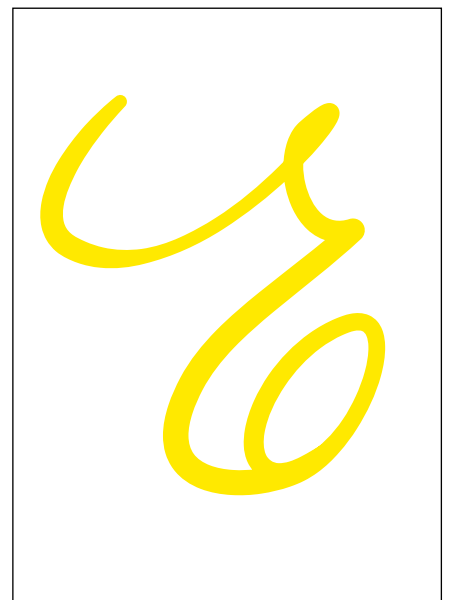

4

Tension is added to the points along the angles of the guides to produce the path that describes the movement used to execute the original drawing.

5

An traditional "nib" (or pen quill) makes thick strokes when moved downward with pressure and thin lines when moved upwards without pressure. I look for downward and upward strokes to determine the maximum and minimum width. Here the minimal width is 4, and the maximal width is 7,5. These values are kept constant throughout all further letters.

6

The width is not entirely controlled by the writer, but, also depends on the nib, ink flow, and paper. Even though there is much variation caused by inkflow and paper, a writer can't deviate from his unique movement patterns.

The forms of individual letters may look whimsical, but they have been whimsically formed by that particular writer. Capturing this particularity, originality, and character rather than the "scanned" form, is important to the process.

# Original and Variety

Here you see examples of original letters and their digital counterpart in the font.

The Einstein font holds five samples for each lower and uppercase letter, number and punctuation marks. All of these are based on original manuscripts by Albert Einstein.

# Variety and Original

In the example left, we see six samples of Einstein writing “Allgemeine Relativitätstheorie” (General Theory of Relativity) from different documents and times. Below the manuscripts, we see the word set in the Albert Einstein font in matching weights and varying stylistic set.

Looking at original samples, one finds variation in the execution of movement. There is no original way to perform a letter; there’s only a “characteristic” way to perform a letter.

We also see variation in stroke width caused by various writing tools and paper. The example here uses different weights of the Albert Einstein font to get closer to the appearance of to the original sample.

In total, the Albert Einstein font holds five variations of each lower and uppercase letter, number, and punctuation marks.

In total, the Albert Einstein font holds 5 variation of each letter in lower and uppercase, numbers, and signs. The Pro Version comes in 10 weights from extra light and fine to ultra bold and heavy.

99	<i>Allgemeine Relativitätstheorie</i>	Heavy
90	<i>Allgemeine Relativitätstheorie</i>	Ultra Bold
80	<i>Allgemeine Relativitätstheorie</i>	Extra Bold
70	<i>Allgemeine Relativitätstheorie</i>	Bold
60	<i>Allgemeine Relativitätstheorie</i>	Semi Bold
50	<i>Allgemeine Relativitätstheorie</i>	Demi
40	<i>Allgemeine Relativitätstheorie</i>	Regular
30	<i>Allgemeine Relativitätstheorie</i>	Fine
20	<i>Allgemeine Relativitätstheorie</i>	Light
10	<i>Allgemeine Relativitätstheorie</i>	Extra Light

# Variety

Each font contains five different sets of letters. The font is programmed to constantly alter between these sets as you type. This ensures that the rendered text looks vivid and guarantees that the same two letters are never repeated next to each other.

# Comparison

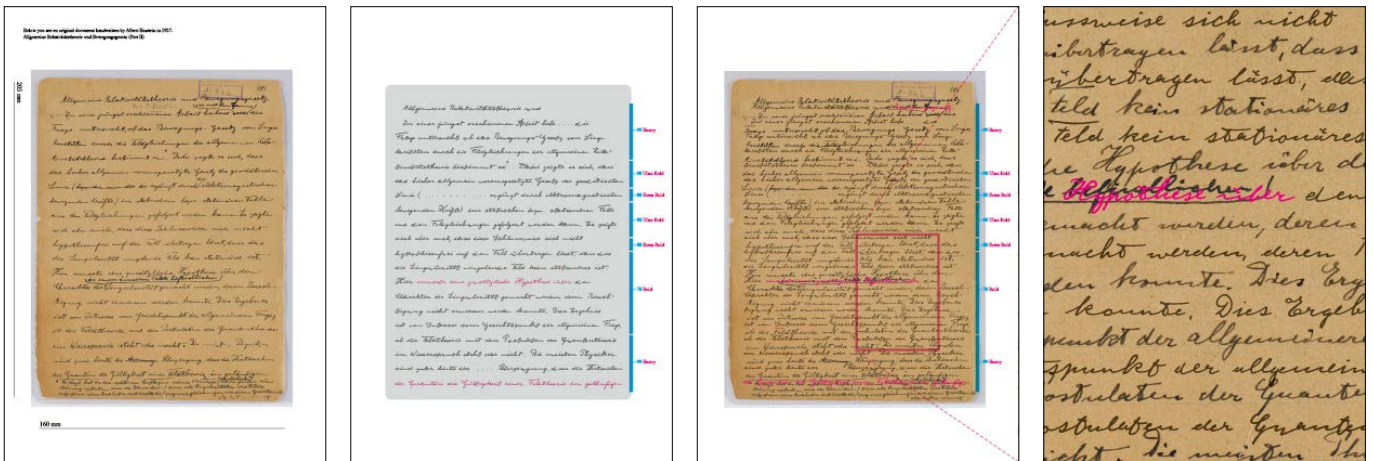

The following side by side comparison enables you to visually compare the relationship between the font and original documents.

The comparison suggests that font and handwriting have something in common. Both refer to the trace of movement from the same author.

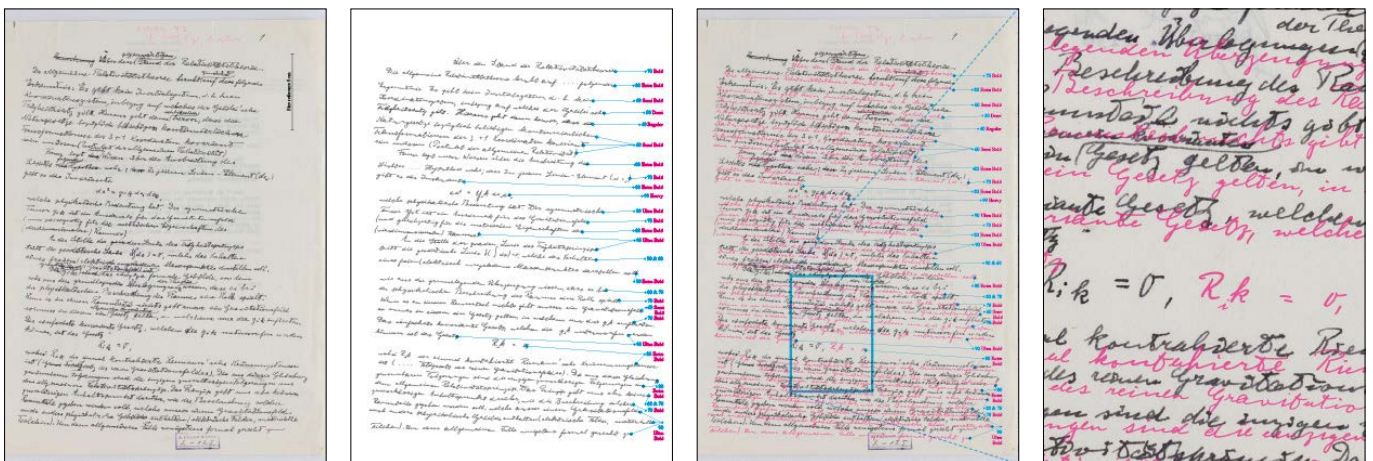

The following documents are presented in the order:

1. Original manuscript reproduced in original size.
2. Transcript of the manuscript set in the Albert Einstein font.
3. An overlay of the manuscript and transcript allow a direct line-by-line comparison. To improve visual clarity when needed, the transcript has been coded in pink.
4. Magnified detail of manuscript and transcript for closer examination.

## Über den Stand der Relativitätstheorie

Die allgemeine Relativitätstheorie beruht auf ... folgender

Ergebnis: Es gibt kein Inertialsystem, d. h. kein Koordinatensystem, in bezug auf welches der Galilei'sche Trägheitssatz gilt. Hieraus geht dann hervor, dass die Naturgesetze bezüglich beliebigen kontinuierlichen Transformationen der 3 + 1 Koordinaten kovariant sein müssen (Postulat der allgemeinen Relativität)

Ferner legt unser Wissen über die Ausbreitung des Lichtes ... Hypothese nahe, dass zu jedem Linienelement  $(dx_i)$  gibt es die Invariante

$$ds^2 = g_{ik} dx_i dx_k$$

welche physikalische Bedeutung hat. Der symmetrische Tensor  $g_{ik}$  ist ein Ausdruck für das Gravitationsfeld (und gleichzeitig für die metrischen Eigenschaften des (vierdimensionalen) Raumes).

An die Stelle der geraden Linie des Trägheitsprinzips tritt die geodätische Linie  $\int ds = 0$ , welche das Verhalten eines frei (elektrisch) ungeladenen Massenpunktes darstellen soll.

Wir aus der grundlegenden Überzeugung wissen, dass es bei der physikalischen Beschreibung des Raumes eine Rolle spielt.

Wenn es in einem Raumteil nichts gibt außer ein Gravitationsfeld, so muss in diesem ein Gesetz gelten, in welchem nur die  $g_{ik}$  auftreten. Das einfachste kovariante Gesetz, welchem die  $g_{ik}$  unterworfen werden können, ist das Gesetz

$$R_{ik} = 0$$

wobei  $R_{ik}$  der einmal kontrahierte Riemann'sche Krümmungstensor ist (.... Feldgesetz des reinen Gravitationsfeldes). Die aus dieser Gleichung gewonnenen Folgerungen sind die einzigen zuverlässigen Folgerungen aus dem allgemeinen Relativitätsprinzip. Das Prinzip gibt uns aber keinen zuverlässigen Anhaltspunkt darüber, wie die Beschreibung solcher Raumteile gegeben werden soll, welche außer einem Gravitationsfeld auch andere physikalische Gebilde enthalten (elektrische Felder, materielle Teilchen). Um dem allgemeinen Falle wenigstens formal gerecht zu

gegenwärtiges  
Bemerkung über den Stand der Relativitätstheorie.

Die allgemeine Relativitätstheorie beruht auf der folgenden Erkenntnis: Es gibt kein Inertialsystem, d. h. kein Koordinatensystem, in bezug auf welches die galileische Trägheitssatz gilt. Hieraus geht dann hervor, dass diese Naturgesetze bezüglich beliebigen kontinuierlichen Transformationen der 3 + 1 Koordinaten kovariant sein müssen (Postulat der allgemeinen Relativität).  
 Unsere Kenntnis über die Ausbreitung des Lichtes ist Hypothese nahe; dass in jedem Linienelement  $(dx_i)$  gibt es die Invarianz

$$ds^2 = g_{ik} dx_i dx_k$$

welche physikalische Bedeutung hat. Der symmetrische Tensor  $g_{ik}$  ist ein Ausdruck für das Gravitationsfeld (mit gleichzeitiger für die metrischen Eigenschaften des vierdimensionalen Raumes).

An die Stelle der geraden Linie des Trägheitssystems tritt die geodetische Linie  $(ds) = 0$  welche das Verhalten eines freien, elektrisch ungeladenen Massenpunktes darstellen soll.

Wir aus der grundlegenden Überlegung wissen, dass es bei der physikalischen Beschreibung des Raumes eine Rolle spielt. Wenn es in einem Raum nichts gibt außer ein Gravitationsfeld, so muss in diesem ein Gesetz gelten, in welchem nur die  $g_{ik}$  auftreten. Das einfachste kovariante Gesetz, welches die  $g_{ik}$  überworfen werden können, ist das Gesetz

$$R_{ik} = 0, \quad R_{,k} = 0$$

wobei  $R_{ik}$  der einmal kontrahierte Ricci'sche Krümmungstensor ist (einmal kontrahierter Krümmungstensor). Die aus dieser Gleichung gewonnenen Folgerungen sind die einzigen zuverlässigen Folgerungen die dem allgemeinen Relativitätssprache. # Improvisation

*Einstein@princeton.edu*

By now, you are probably asking what happened if a glyph was missing or simply could not be found. Einstein most likely never drew an "@" sign in his life or the letter combination "www."

In the beginning of this document, I emphasized the importance of movement to create a letter, rather than the form of a letter. After a lot of movement practice one becomes acquainted with the way a writer moves to make a loop or a hoop. It is possible to improvise based on that knowledge.

Based on this research one can fill in the gaps by improvising based on what one has learned. For example to create an @ sign the lowercase "a" was a reference combined with studies of brackets and circled numbers found in Einstein's mathematical notebooks.

The more intensely one studies and internalizes the movements that a writer made to draw letters in their manuscripts, the more profound this interpretation will be. The improvised letters like the @ sign, an Icelandic letter Þ or a Polish Ł were done at the very end of the production to ensure that as much practice and knowledge as possible goes into the improvisation.

## **Regarding the German ß**

For my research I looked through a variety of German manuscripts ranging from the early 1900s to the mid 1950s. It was not possible to find one sample of Einstein writing ß - which lead to the assumption that he consciously decided to only use "ss". Therefore the font also holds no improvised ß sign, but instead 5 versions of a double s ligature.

# Expression of Thanks

Creating the Albert Einstein font was made possible with the overwhelming support of 2334 Backers who pledged \$55,577 on Kickstarter.

We like to say especially thank you to everyone working at Kickstarter in New York and around the world for creating a great environment for creative projects to thrive.

In the following pages we would like to acknowledge all backers of the Kickstarter Campaign.

**Thank you for your generous support.**

## Credits / Imprint

Albert Einstein font • How was the font made? • A visual document.

By Harald Geisler

Version 1.0

This PDF document was last updated April 2017.

The concept to create a typeface of Albert Einstein's handwriting is based on the idea of Elizabeth Waterhouse and Harald Geisler.

Einstein's Manuscripts used with permission of the Albert Einstein Archive, the Hebrew University of Jerusalem.

Trademark: ALBERT EINSTEIN and EINSTEIN are either trademarks or registered trademarks of The Hebrew University of Jerusalem. Represented exclusively by Greenlight. Official licensed merchandise.
