## Administrative Information

### Acquisition Information

Electricity is a portion of the Business Ephemera Series of the Warshaw Collection of Business Americana, Accession AC0060 purchased from Isadore Warshaw in 1967. Warshaw continued to accumulate similar material until his death, which was donated in 1971 by his widow, Augusta. For a period after acquisition, related materials from other sources (of mixed provenance) were added to the collection so there may be content produced or published after Warshaw's death in 1969. This practice has since ceased.

## Processing Information

In 2016, with funding provided by the Smithsonian Institution's Collections Care and Preservation Fund, the Archives Center at the National Museum of American History implemented the use of minimal level processing standards to increase information about and facilitate access to more of our collections. A large portion of stored material from the original acquisition received minimal level processing, which resulted in additions to this Subject category. This effort included basic arrangement and replacement of non-archival housing for long-term stability, but staples and other fasteners have not all been removed. Revisions to the encoded finding aid were made to reflect the added content in context to the previously processed material.

Minimal level processing and enhancement of the machine-readable finding aid completed by Nicole Blechynden, September 2017.

## Scope and Contents

The electricity section is one of the largest sections found in the Warshaw Collection. While the material in the collection does range from 1856 to 1980, the bulk of the material relates to the 1890-1915 time period. As such this material is a rich source of information concerning the early development of the electric industry when numerous smaller companies were in operation.

The material is present in a variety of formats. The most numerous, by far, are publications. These are in the form of general company publications, parts and product publications, journals, and a variety of more general publications. In addition, there are advertisements, company correspondence, photographs and post cards, and even a formal Thomas Edison signature from his Menlo Park days. For the most part the information in this section is directed towards the general public. However, there is a considerable amount of information created for dissemination within specific companies only.

### Subseries 2: Related Electrical Topics

Scope and Contents: This series was created because of the unique composition of the electricity section. It was deemed appropriate to separate each of the following subseries from company series for one of a few reasons. Either it was information mostly unrelated to company information, or it was deemed to be important enough to live on its own. However, none of the information in any of the subseries was deemed important enough to live on in a full series on its own.

#### Subseries 2.1: Electrical Appliances

Scope and Contents: Some of the information in this subseries is directly related to companies such as Sunbeam and Hotpoint. It consists of general product information, catalogues, and even a few cookbooks.
