## Areas of Application

1 HTA-CE Channels  
2 HZA Channels  
3 HGB Channels  
4 HTU Channels  
5 Roof and Wall  
6 Curtain Wall  
7 Accessories

### CURTAIN WALL

Edificio Gas Natural, Barcelona/Spain

### POWER STATIONS

Power station

### BRIDGES

Passerelle Simone de Beauvoir, Paris/France

### SPORTS

Rheinenergiestadion, Cologne/Germany

### LIFTS AND ELEVATORS

Lift fixings, guide rails

### HTU Trapezoidal sheet panels

UPS Air Hub, Cologne Bonn Airport, Germany

### TUNNELS

Lötschberg-Base tunnel, Switzerland

### ROOFS AND WALLS

Timber pitched roof construction

# Better safe than sorry

## The right channel for every application

Besides excellent adjustability HALFEN Cast-in channels save considerable installation time.

The result: faster construction and therefore cost saving. HALFEN Cast-in channels are the ideal basis for easy to install, adjustable connections. A foam strip filler stops the ingress of concrete into the channel.

HALFEN Channels are suitable for various types of construction connections, for example: façades, precast concrete elements, stadium seating, in civil engineering (fixing of tunnel signals) lift guide rails, crane runway, pipe fixings under bridges.

**HALFEN fixing systems – The intelligent alternative to drilling and welding.**

### HALFEN HTA-CE Cast-in channels **NEW!**

#### Application

- fixing of all types of building components
- **NEW:** HTA-CE 50/30P and HTA-CE 40/22P with more load capacity.

#### Features

- adjustable
- hot-rolled profile; suitable for dynamic loads
- can be installed in concrete pressure and tensile-stress zones

### HALFEN HZA Cast-in channels, serrated

#### Application

- fixing of all types of building components

#### Features

- adjustable
- load transmission in longitudinal channel direction
- can be installed in concrete pressure and tensile-stress zones
- suitable for dynamic loads\*

\*applies for all hot-rolled and serrated DYNAGRIP® channels

### HALFEN HZA-PS Cast-in channels, serrated

#### Application

- fixing of all types of building components in safety critical areas of nuclear power stations and similar nuclear facilities

#### Features

- as HZA Channels
- suitable for exceptional load cases caused by earthquake, plane crashes or explosions – for concrete crack widths up to 1.5 mm

### HALFEN HGB Handrail connections

#### Application

- fastening banisters on the thin front face of balcony slabs

#### Features

- the special ribbed head anchor provides good load transfer in thin concrete elements

# Channel range and steel load capacity/tension

**HALFEN has enhanced its anchor channel range; two new channel profiles are now available: HTA-CE 40/22P and HTA-CE 50/30P.**

The different profiles can now cover a significantly higher load range, providing up to 45% more load capacity. Therefore allowing more economical solutions.

## Load capacities for HALFEN Channels hot-rolled, serrated

## Load capacities for HALFEN Channels hot-rolled

## Load capacities for HALFEN Channels cold-rolled, serrated

## Load capacities for HALFEN Channels cold-rolled

**NEW!**

## HALFEN Anchor channels – with increased load capacity!

**New:** HTA-CE 40/22P – Previously, for a load of  $N_{Ed} > 11.1$  kN the next larger channel had to be selected; a HTA-CE 50/30 (with  $N_{Rd,s,c} = 17.2$  kN) instead of a HTA-CE 40/22.

Now in most cases the HTA-CE 40/22P (with  $N_{Rd,s,c} = 16.1$  kN) is sufficient. This also allows a more economical screw to be used; a HS 40/22 instead of a HS 50/30.

**HTA-CE 50/30P** – Previously, for a load of  $N_{Ed} > 17.2$  kN the next larger channel had to be selected; a HTA-CE 52/34 (with  $N_{Rd,s,c} = 30.6$  kN) instead of a HTA-CE 50/30. Now in most cases the HTA-CE 50/30P (with  $N_{Rd,s,c} = 21.7$  kN) is sufficient.

**On-site safety:** In many projects, different applications are therefore possible using a single channel profile. This reduces the risk of confusion when using different channels in one project. Furthermore, fewer bolt/screw types are required.

## Minimal channel size for economical reinforcement layouts:

In respect to its load bearing capacity the new HTA-CE 40/22P can almost always be used instead of a HTA-CE 50/30. With a height of only 23 mm, the new channel is almost always installed completely in the required concrete cover. This allows more efficient reinforcement planning (mesh and supplementary reinforcement).

## European certification:

The new HTA-CE 40/22P and HTA-CE 50/30P types are included in ETA-16/0453 and are therefore certified for use, without restrictions, in 30 European countries.

## HTA-CE with improved load capacity (illustrated: Steel load capacity/tension)

# HALFEN Cast-in channels HTA-CE

## The advantages at a glance

**A** part from excellent adjustability, HALFEN Cast-in channels save considerable installation time. The result: faster construction and therefore reduced overall cost.

### Safe and reliable

- no damage to the reinforcement
- approved for fire-resistant structural elements
- suitable for use in concrete pressure and tensile stress zones
- high corrosion resistance steels available
- suitable for dynamic loads
- European Technical Approval/Assessment (ETA)
- precise calculation with HALFEN-Software

### Quick and economical

- adjustable anchoring
- bolts instead of welding
- maximum efficiency when installing matrices and rows
- cost effective installation using standard tools
- optimised pre-planning reduces construction time
- large range of types available for various requirements
- no noise, no vibration during installation, therefore no health hazards

HALFEN HTA-CE Channels cold-rolled

HALFEN HTA-CE Channels hot-rolled

suitable for dynamic loads

**NEW:** HTA-CE 50/30P and HTA-CE 40/22P with more load capacity.

### What does HTA-CE involve?

HTA-CE signifies that the channel is CE marked. HALFEN as the manufacturer declares, that it is responsible for the conformity of the product with the (DoP - Declaration of performance), and that the specified performance and compliance with all relevant European legislation has been applied.

## General

### 1 Fire-resistance

Verification of anchorages for fire load must take the specifications of the Technical Reports TR 020 into account. "Evaluation of anchorage in concrete with regards to fire resistance". The corresponding characteristic values can be found in the annexes of ETA-09/0339 and ETA-16/0453.

The approvals can be downloaded from our website [www.halfen.com](http://www.halfen.com) ► **Brochures**  
► **Approval** ► **Fixing systems**.

### 2 Material fatigue

All stated resistance values  $\Delta F$  are specified according to general building approval Z-21.4-34\* (see page 37).

ETA values for HTA-CE 52/34 can be found in ETA-09/0339.

Values for HTA-CE 40/22P and HTA-CE 50/30P can be found in ETA-16/0453.

\*valid until August 14, 2017

### 3 Quality

Quality is the outstanding feature of our products. HALFEN materials and products are subjected to the most stringent quality control procedures.

A quality inspection by the DNV GL\* has verified that our quality management system meets the requirements of the ISO 9001:2015 standard.

\*merger of DNV (Det Norske Veritas) and GL (Germanischer Lloyd) in 2013

Certificate no. 202384-2016-AQ-GER-DAkkS

### 4 EPD

An EPD® (Environmental Product Declaration) provides transparent and comparable ecological data which helps to evaluate the sustainability of a building. Already during the planning phase the data provided here is of great significance for architects and planners. The data provided also helps to ensure the high demands on the environmental performance of the building are met.

### 5 BIM

HALFEN already has considerable experience as a BIM partner and has successfully completed various projects using the BIM methodology. All HALFEN engineers are trained to properly supervise this process. With a combination of wide experience and highly-trained engineers the increasing demand for BIM projects can be efficiently met. Examples of previous projects developed using BIM can be found at [www.halfen.com](http://www.halfen.com) ► **Service** ► **BIM** ► **BIM references**.

# HALFEN CAST-IN CHANNELS HTA-CE

## Materials / Corrosion Protection

### Hot-dip galvanized FV:

Dipped in a galvanizing bath, with a temperature of approx. 460 °C, this is a method used primarily for open-profile channels.

### Zinc galvanized GVs:

HALFEN T-bolts are electrogalvanized and coated with a CrVI-free thick layer passivation.

### HALFEN Cast-in channels, steel, hot-dip galvanized

		Steel		
		Material	Standard	Zinc coat
	Channel profile	1.0038	EN 10 025-2 ①	FV: ≥ 55 µm
		1.0044	EN 10 025-2 ①	FV: ≥ 55 µm
	Bolt anchor B6	Steel	EN 10263 or EN 10269	FV: ≥ 55 µm
	Weld-on anchor	Steel	EN 10 025-2	FV: ≥ 55 µm

① Steel according to EN 10 025-2 and HALFEN specification

### HALFEN Bolts, galvanized steel

		Steel		
		Material	Standard	Zinc coat
	Bolt	Steel (Sc) 4.6 or (Sc) 8.8	EN ISO 898-1	FV: ≥ 50 µm GVs: ≥ 12 µm
	Hexagonal nut	Steel (Sc) 5 or (Sc) 8	EN 898-2	FV: ≥ 50 µm GVs: ≥ 12 µm
	Washer	Steel	EN ISO 7089, EN ISO 7093	FV: ≥ 50 µm GVs: ≥ 12 µm

(Sc) = Strength class

### Stainless steel (NR):

Chromium is the most important alloy element in stainless steel. A specific chromium concentration ensures the generation of a passive layer on the surface of the steel that protects the base material against corrosion. This explains the high corrosion resistance of stainless steel.

### Materials:

- WB** = Steel mill finished
- FV** = Steel hot-dip galvanized
- GVs** = Steel zinc galvanized (with special coating)
- A4** = Steel, stainless 1.4571 / 1.4404 / 1.4578
- HCR** = Steel, stainless 1.4547 / 1.4529

### HALFEN Cast-in channels, stainless steel

		Stainless steel		
		Material	Standard	Corrosion resistance class ②
	Channel profile	1.4404 or 1.4571	EN 10 088	III

## Materials / Corrosion Protection

### Corrosion protection requirements

Material and applications				
Description	1	2	3	4
	Dry interior-rooms	Damp interior-rooms	Medium corrosion level	High level of corrosion
Definition of application areas	Anchor channels may only be used in components in indoor environments. <b>For example:</b> living and office spaces, schools; hospitals, commercial shops with the exception of wet rooms as in column 2.	Anchor channels may also be used in components in areas with normal humidity <b>For example:</b> kitchens, bathrooms and laundry-rooms in residential buildings. Exceptions: where permanent steam is present and under water.	Anchor channels may also be used in outdoor environments (including industrial environments and coastal regions) or in wet rooms, if conditions are not especially aggressive (for example: continual immersion in sea water etc. as in column 4).	Anchor channels may also be used in exceptionally aggressive environments (for example: continual immersion in sea water) or in seawater spray zones, chloride environments in swimming pools or in environments with an extremely aggressive chemical atmosphere (for example: flue gas desulfurization plants or road tunnels where de-icer systems are in use).
Channel profile 	Steel 1.0038, 1.0044; EN 10025 Hot-dip galvanized ≥ 55 μm ⑥	Steel 1.0038, 1.0044; EN 10025 Hot-dip galvanized ≥ 55 μm ⑥ Stainless steel 1.4307, 1.4567, 1.4541; EN 10088	Stainless steel 1.4404, 1.4571, 1.4062, 1.4162, 1.4362 EN 10088	Stainless steel 1.4462 ②, 1.4529, 1.4547 EN 10088
Anchor 	Steel 1.0038, 1.0214, 1.0401, 1.1132, 1.5525; EN 10263, EN 10269 Hot-dip galvanized 55 μm ⑥	Steel 1.0038, 1.0214, 1.0401, 1.1132, 1.5525; EN 10263, EN 10269 Hot-dip galvanized ≥ 55 μm ⑥ Stainless steel 1.4307, 1.4567, 1.4541; EN 10088	Stainless steel 1.4404, 1.4571, 1.4362, 1.4578 EN 10088 Mill finish, 1.0038 ③	
Special HALFEN Bolts with shaft and screws in accordance with EN ISO 4018 	Steel strength class 4.6/8.8 EN ISO 898-1 Zinc galvanized ≥ 5 μm ④	Steel strength class 4.6 / 8.8; EN ISO 898-1, Hot-dip galvanized ≥ 50 μm ① ⑤ Stainless steel, strength class 50, 70 1.4307, 1.4567, 1.4541 EN ISO 3506-1	Stainless steel Strength class 50, 70 1.4404, 1.4571, 1.4362, 1.4578 EN ISO 3506-1	Stainless steel Strength class 50, 70 1.4462 ②, 1.4529, 1.4547 EN ISO 3506-1
Washers EN ISO 7089 and EN ISO 7093-1  Product classification A, 200 HV	Steel EN 10025 Zinc galvanized 5 μm ④	Steel EN 10025 Hot-dip galvanized ≥ 50 μm ① ⑤ Stainless steel Steel grade A2, A3; EN ISO 3506-1	Stainless steel Steel grade A4, A5 EN ISO 3506-1	Stainless steel 1.4462 ②, 1.4529, 1.4547 EN ISO 3506-1

### HALFEN Channels (NR) mill finish welded-on anchors

Corrosion protection of the mill finished weld-on anchor is based on the following concrete cover c:

Profile HTA-CE	40/22P 40/25	52/34 54/33 50/30P 49/30	55/42	72/48 72/49
Concrete cover c [mm]	35	40	50	60

The minimum concrete cover depends on local environmental conditions and bid specifications.

### HALFEN Channels (NR) made completely in stainless steel

The HALFEN Cast-in channels "entirely of stainless steel" are not restricted to any minimum concrete cover as no relevant corrosion occurs.

#### Areas of application

- bridge and tunnel construction (fastening of pipes, etc.)
- construction of sewage treatment plants (fixing of spillovers)
- chemical industry (installations exposed to aggressive substances)
- ventilated façades, e.g. masonry renders
- also for all structural reinforced concrete elements with higher demands on the concrete cover

### HALFEN Channel made in stainless steel – HCR

The high corrosion resistance (HCR) HALFEN Cast-in channels are mandatory when high concentrations of chlorides, sulphur and nitrogen oxides are present.

#### Areas of application

- road tunnels
- structures in salt water
- indoor swimming pools
- areas not routinely cleaned
- poorly ventilated parking garages
- in narrow, major city streets

# HALFEN CAST-IN CHANNELS HTA-CE

## Installation/Assembly

### 1.1 Delivery and identification

HALFEN can supply ready to install short channels and standard lengths.

**Product identification:**

- ① on channel inside
- ② also on channel side

### 1.2 Installing to formwork

If required, HALFEN Cast-in channels can also be cut to size on site.

### 2.1 Fixing to the formwork

#### Timber formwork

#### 2.1.1 with nails

#### 2.1.2 with staples

#### Steel formwork

#### 2.1.3 aluminium rivets

#### 2.1.4 HALFEN Bolt and nut

### 2.1 Fixing to the formwork, continued

#### Steel formwork

#### 2.1.5 HALFEN HFK Fixing cone

### 2.2 Top face installation

#### 2.2.1

directly to reinforcement:  
with tying wire

#### 2.2.2

with HALFEN HCP ChanClip

#### 2.2.3 Installation using an auxiliary aid

# HALFEN CAST-IN CHANNELS HTA-CE

## Installation/Assembly

### 3.1 Removing the filler

Strip filler, available in two versions:

KF - PE strip filler with reinforcement layer

KF - PE strip filler

#### Removing the strip filler

Grip the strip filler at one end and pull out in one piece by hand, use a tool, e.g. a screwdriver.

### 4.1 Installing HALFEN bolts

#### Safe assembly with HALFEN Cast-in channels

HALFEN Bolts can be inserted anywhere in the channel slot, turned 90° and then locked in place by tightening the nut. Do not position bolts at channel ends past the last anchor. On channels with bolt anchors, the anchor locations are visible through the channel slot.

#### Check

Bolts: After installation check that the bolts are properly aligned; the notch or notches in the tip of the shank must be at right angles to the longitudinal axis of the channel.

#### Fixings

The bolt heads must sit flush on both lips of the anchor channel and be secured by tightening the nut with a torque wrench with the required value. Observe the torque values in the tables on page 22.

#### Direct attachment ①

Surface-flush installation

Non-flush installation

- ① If the front surface of the channel is set back from the concrete surface, the attached structure must be shimmed with a washer (VUS). In case of shear stress, add bolt flexure to the tensile force.

#### Stand-off installation ②

- ② Always install a square washer for stand-off installations.

#### Example:

HALFEN Channel: HTA-CE 49/30  
 HALFEN Bolt: HS 50/30 - M16  
 Washer: VUS 49/30 - M16

#### Assembly instructions on the internet

Multi-language assembly instructions can be found at [www.halfen.com](http://www.halfen.com) ▷ Brochures ▷ Installation Instructions. Or scan the code and select the required document.

# HALFEN CAST-IN CHANNELS HTA-CE

## Identification / Geometry

### Identification

Channel material	Type identification
1.0038 / 1.0044	HTA-CE 38/17
A2: 1.4307	HTA-CE 38/17 - A2
A4: 1.4404 / 1.4571	HTA-CE 38/17 - A4
HCR: 1.4529 / 1.4547	HTA-CE 38/17 - HCR

### Type identification:

- ① Inside surface, bottom of the channel.
- ② Additionally on channel side

### Minimum edge distances and minimum bolt spacing

Anchors must be installed at a minimum distance from the component edges. The distance depends on the selected channel profile and the corresponding HALFEN T-head bolt.

According to the ETA, the spacing between bolts  $s_s$  must not be less than  $5 \times d_s$ . Reduction of the load bearing capacity is required if  $s_s < s_{slb}^*$  (see table on page 16).

\* $s_{slb}$  = centre distance of the bolts  $N_{Rd, s, l}$

Figure: Minimal edge and bolt spacings

## HALFEN Bolts HS

### HALFEN Bolts - Type HS

Standard HALFEN Bolts (no nib or serration) for all profile types HTA-CE

- two direction load capacity
- identified on bolt tip with 1 notch

- HALFEN 4.6** Strength class 4.6 / 8.8 galvanized (GVs) or hot-dip galvanized (FV)
- HALFEN A4-70** Material grade A4-50 / A4-70 Stainless steel
- HALFEN HCR50** Strength class 50 Stainless steel (1.4529/1.4547)

### Calculating the bolt length $l_{req}$ for HALFEN Bolts

$$l_{erf} = t_{fix} + f + h + v_{min}$$

Dimensions $v_{min}$	
Bolt diameter	$v_{min}$ [mm]
M6	11.0
M8	12.5
M10	14.5
M12	17.0
M16	20.5
M20	26.0
M24	29.0
M27	31.5
M30	33.5

Lip dimensions f	
Channel profile	f [mm]
28/15	2.25
38/17	3.0
40/22P	6.0
40/25	5.6 / 5.4 <sup>①</sup>
49/30	7.39
50/30P	7.85
52/34	10.5
54/33	7.9
55/42	12.9
72/48	15.5
72/49	9.9

- $l_{req}$  = required bolt length
- $t_{fix}$  = thickness of clamped component
- f = profile lip height
- h = washer thickness
- $v_{min}$  = nut height EN ISO 4032 + overhang approximately 5 mm (for M20: 7 mm)

<sup>①</sup> value f for stainless steel

### Bolt design values

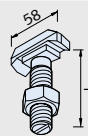

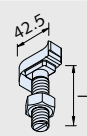

The table on the right lists the design resistance of HALFEN Bolts with different thread diameters, materials and strength classes.

$N_{Rd,s,s}$  is the resistance against tension loads,  $V_{Rd,s,s}$  is the the resistance against shear loads and  $M^0_{Rd,s,s}$  is the flexural resistance when subjected to transverse load induced with a cantilever.

Design resistance										
Material / Strength class		M6	M8	M10	M12	M16	M20	M24	M27	30
4.6	$N_{Rd,s,s}$ [kN]	4.0	7.3	11.6	16.9	31.4	49.0	70.6	91.8	112.2

## HALFEN Bolts HS

### 1 Torque values HS

#### Standard

Components are braced against the concrete and anchor channel.

Torque is applied as in the following table and must not be exceeded.

#### Steel-Steel

Components are braced against the anchor channels using suitable washers.

Torque is applied as in the following table and must not be exceeded.

Standard: Recommended torque values $T_{inst}$		
HTA-CE Profile	HALFEN Bolt HS...M [mm]	Torque value $T_{inst}$ [Nm]
		Steel 4.6; 8.8 Stainless steel Strength class 50 Strength class 70

## HALFEN Bolts HRS with Nib (Not ETA Approved)

### HALFEN Bolts - Type HSR

HALFEN Bolts with nib

- only for hot-rolled profiles: 40/22P, 50/30P, 52/34, 72/48
- only for normal steel: WB and FV
- load capacity in all directions
- load capacity in channel longitudinal direction according to expert report
- identification on bolt tip with **2 notches**

### Bolt design values HSR

⚠ Not included in the ETA!

Following combination can be used in supporting structures subjected to loads in channel longitudinal direction:

- hot-rolled, smooth, hot-dip galvanized HALFEN Channels with HALFEN HSR Type Bolts with nib
- serrated HALFEN Channels HZA with serrated HALFEN Bolts HZS, see page 29

See table on the left for the maximum design values for friction load. See page 22 for torque values.

# HALFEN CAST-IN CHANNELS HTA-CE

## Custom Anchors – Anchor Variations (Not ETA Approved)

### ANK-E end anchor; for on-site custom length HALFEN Cast-in channels

#### Notes for assembling end anchor type ANK-E

- Cut the HALFEN Cast-in channel at the selected point. The cut face must be at a right angle to the longitudinal axis of the channel. The end projection "e" should not be less than 35 mm and not more than 175 (225) mm\*.
- Select the correct **ANK-E** End anchor for the HALFEN Cast-in channel profile; see table on the right. Slide the clamping element on to the back of the channel. If necessary, push in the foam filler at the end of the channel.
- Tighten the bolt by applying the required torque. See table (right) for correct torque value.

End anchor selection			
for profile	End anchor	Thread	Torque $T_{inst}$ [Nm]

28/15 - A4	ANK-E1 - A4	M8	10
38/17 - FV	ANK-E2 - FV	M10	20
40/25 - FV			
41/22 - FV <sup>①</sup>			
38/17 - A4	ANK-E2 - A4	M10	20
40/25 - A4			
41/22 - A4 <sup>①</sup>			

<sup>①</sup> Short HZA 41/22 sections may be used with one end anchor only. Not included in the approval.

#### Custom lengths

\* 175: for 28/15, 38/17  
225: for 40/25, 41/22

### HALFEN Anchor channels, hot-dip galvanized with stainless steel anchors

#### Requirements

according to EN 1992-1-1/NA (EC 2 with German National Annex, 2<sup>nd</sup> edition, 2016, chapter 8.10.1.1) *"Ensure at least 20mm concrete between pre-stressed tension strands and galvanized components."*

Otherwise there is a risk of hydrogen induced stress corrosion cracking.

#### Solution

If hot-dip galvanized channels are used together with stainless steel bolt-anchors then the pre-stressed tension-strands are allowed to have contact with the stainless steel bolt anchor.

#### Types:

Lengths available: up to 6.07 m

#### Available profiles:

- 50/30P
- 49/30
- 40/25
- 38/17

# HALFEN CAST-IN CHANNELS HTA-CE

Available Types - HTA-CS / Channel Pairs / Corner Elements

## HALFEN Channels HTA-CS - Curved Solution

### Areas of application:

- tunnel construction
- reinforced concrete tunnels for utilities
- curved walls
- sewage plants

### Ordering example:

HALFEN Cast-in channel, curved  
 HTA-CS 52/34-Q - A4,  $R_i = 4000$  mm,  $L = 1050$  mm

Curved HALFEN Cast-in channels in tunnel segments

### Smallest radius - all materials

## HALFEN Channel pairs

### Material/type:

Channel (Type straight or curved):

**FV** = Hot-dip galvanized

**A4** = Stainless steel

### Spacer:

Reinforced concrete B500B or B500B/A NR,  $\varnothing$  10 - 16 mm  
 Recommended for stainless steel type spacers in: B500B/A NR.

### Ordering example:

Type: HALFEN Channel pair HTA-CE 38/17

Dimensions:  $L = 350$  mm,  $a = 200$  mm

Material: hot-dip galvanized, with filler

Radius:  $R_i = \dots$  (for curved type)

## HALFEN Corner channel

### Material/type:

Channel and anchor:

**FV** = Hot-dip galvanized

**A4** = Stainless steel

### Standard type:

$a/b = 125/250$  mm

Other lengths for a and b and other profiles are available on request

Figure: HTA-CE 38/17 - Corner piece

### Area of application:

- fixing for HALFEN Console anchors for supporting masonry renders
- other near edge fixings

### General

The following information is necessary to verify an anchor channel:

- type of HALFEN Cast-in channel and material
- length of the HALFEN Cast-in channel with number of anchors and spacing
- position of the HALFEN Cast-in channel in the concrete, located by its distance from the lower, upper left and right edges of the component
- thickness of the concrete components
- concrete strength class
- condition of the concrete; cracked or verified as non-cracked
- is there dense reinforcement in the vicinity of the anchor channel
- HALFEN T-head bolt thread size
- bolt positions
- tensile load and shear load of each bolt

### Verification method

# HALFEN CAST-IN CHANNELS HTA-CE

## Software

### HALFEN Software HTA-CE

The HALFEN calculation program for HALFEN Cast-in channels according to the ETA provides the user with a convenient and very powerful calculation tool.

#### Verifications

CEN/TS 1992-4 and EOTA TR047 require a wide range of verifications for cast-in channels and the concrete used. These verifications are processed by the user-friendly HALFEN software. In just a few seconds the user is presented with a list of suitable HALFEN Cast-in channels for the relevant load situation.

#### Boundary conditions

The calculation takes into account all necessary boundary conditions, typical examples being:

- cracked or non-cracked concrete
- the geometry of the concrete components, in particular the distances from the channel to the component edge
- various reinforcement patterns
- consideration of several dimensioning or characteristic loads
- positioning of the loads with a definable adjustment range, and the option of shifting the defined bolt pattern along the complete channel length

- verification of the required HALFEN T-head bolts and if required also for stand-off installations
- engineering consideration of fatigue loads and fire influence

#### Input

The geometry and loads are entered interactively. Entries are displayed promptly in a 3D graphic. Entries can also be changed directly in the graphic. Click on the load, the measurement or the component line you want to change to make the required modification.

#### Results

After calculation, the software output provides either the results for a preselected profile, or in the case of automatic selection a list of all suitable profiles. Profiles and T-bolts with in-complete verifications are highlighted in red.

All software can be found under: [www.halfen.com](http://www.halfen.com) > Downloads > Software/CAD

Screenshot 2: Input screen, HALFEN HTA-CE Software

Screenshot 3: Interactive 3D-display

Screenshot 4: Results list

# HALFEN CAST-IN CHANNELS HTA-CE

## Software

### HALFEN Software HTA-CE

#### Visual control

All verifications for the current channel profile are listed in a tree structure. Green check-marks indicate successful verifications. Red check-marks indicate unsatisfactory verifications.

For further visual control a progressbar on the right indicates the status of the verification process. Here too, red bars mean that a load has been exceeded, while green bars symbolize verifications that meet the criteria.

Detailed calculation information (with load positions, section sizes and utilization factors) can also be selected in a tree menu.

After selecting a HALFEN Cast-in channel and suitable bolts, the dimensioning results can be imported into the data list and saved.

#### Print-outs

Print-outs are possible in a brief and in a verifiable long version. The long version includes all decisive verifications, a diagram of necessary reinforcement and a 2D graphic of the geometry and load.

The latest version of the dimensioning program is available for download on the Internet at [www.halfen.com](http://www.halfen.com).

#### System requirements:

- Windows 10, Windows 8, Windows 7,
- Microsoft .NET Framework 4.6

#### HALFEN Channel type HTA-CE 49/30 - A4 - 350 - KF - ANK.A

HALFEN Channel HTA-CE 49/30 with smooth channel lips for adjustable fixing of components,

according to European Technical approval ETA-09/0339, suitable for anchoring in reinforced or non-reinforced standard concrete in a strength class of at least C12/15 and a maximum C90/105 in accordance with EN 206 under quasi-static loading as well as fire exposure.

#### Type HTA-CE 49/30 - A4 - 350 - KF - ANK.A4

with

$N_{Rk,S,C} = 31 \text{ kN}$  = char. resistance, steel failure (tension), connection channel anchor  
A4 = Carbon steel or stainless steel 1.4404 / 1.4571,  
350 = Channel length [mm] with 3 anchors,  
KF = Foam strip filler,  
ANK.A4 = Anchor of stainless steel 1.4404 / 1.4571 / 1.4578,

or equivalent; deliver and install according to the manufacturer's instructions.

ETA - 09 / 0339

# HALFEN Cast-in channels HZA

## The advantages at a glance

**A** part from excellent adjustability, HALFEN Cast-in channels save considerable installation time. The result: faster construction and therefore reduced overall costs.

### Safe and reliable

- no damage to the main reinforcement
- approved for fire-resistant structural elements
- suitable for installation in concrete pressure and concrete tensile zones
- hot-rolled channels, suitable for dynamic loads
- building authority approved

### Quick and economical

- adjustable anchorage
- bolts instead of welding
- maximum efficiency when installing in rows
- cost-effective installation using standard tools
- optimized pre-planning reduces construction time
- large range of channels types for various applications
- user-friendly installation; no noise, dust and vibration

## Areas of Application / Product Range

Material and area of application				
<b>Area of application</b>	Use only possible if all fixture components are protected by a minimum concrete cover, depending on environmental conditions, as specified in DIN EN 1992-1-1:2011-01.	For interior use only, for example; in residential, office and school buildings, hospital and retail facilities, not suitable for wet rooms.	For use in building components in rooms with normal humidity (including kitchens, bathrooms, laundry rooms in residential buildings).	Building components, corrosion class III, according to EN 1993-1-4, table A.3.
<b>Channel profile</b>	Mill finish	Hot-dip galvanized (thickness $\geq 50 \mu\text{m}$ )	Hot-dip galvanized (thickness $\geq 50 \mu\text{m}$ )	Stainless steel 1.4404/1.4571
<b>Anchor</b>	Mill finish	Hot-dip galvanized (thickness $\geq 50 \mu\text{m}$ )	Hot-dip galvanized (thickness $\geq 50 \mu\text{m}$ )	Welded anchor mill finish ②
			Bolt anchor in stainless steel 1.4404/1.4571	Stainless steel 1.4404/1.4462 1.4571/1.4578
<b>Bolts, nuts, washers</b>	No corrosion protection	Zinc galvanized (thickness $\geq 5 \mu\text{m}$ ) Mechanically galvanized (thickness $\geq 10 \mu\text{m}$ )	Hot-dip galvanized ① (thickness $\geq 40 \mu\text{m}$ )	Stainless steel A4-50 FA-70 A4-70

① Or zinc galvanized with special coating, thickness  $> 12 \mu\text{m}$ .  
 ② Only allowed for profiles 38/23, 53/34, 64/44 and 41/22.  
 For corrosion protection of the welded anchors a minimum concrete cover c is given: for profile (38/23) 30mm; (41/22) 30mm; (53/34) 40mm; (64/44) 50mm.

$s$ = Anchor spacing, see page 35					

# HALFEN CAST-IN CHANNELS HZA

## Dimensioning

### 1 Minimum spacing $a_r$ , $a_e$ , $a_a$ , $a_f$ and $h$

The minimum spacing specified in the table applies to reinforced standard weight concrete of all strength classes  $\geq C20/25$ .

There are no additional requirements for reinforcement if spacing is increased by 30%.

Minimal spacing HALFEN Channel HZA [mm]

All dimensions in [mm]	Single channel				Paired channels ③			Minimum component size	
	$a_r$ ④	$a_a$	$a_e$	$a_f$	$a_{r1}$	$a_1$	$a_e$	$b$ ①	$h$ ②
<b>HZA 64/44 DYNAGRIP</b>	250	500	225	450	–	–	225	500	$187 + c_{nom}$
<b>HZA 53/34 DYNAGRIP</b>	200	400	175	350	–	–	175	400	$165 + c_{nom}$
<b>HZA 41/22</b>	100 ⑤	150	80	200	100	100	80	200 ⑤	$85 + c$
<b>HZA 38/23 DYNAGRIP</b>	150	300	130	250	225	150	130	300	$99 (154) + c_{nom}$
<b>HZA 29/20 DYNAGRIP</b>	100	200	80	200	140	125	80	200	$87 + c_{nom}$

① Minimum component width  $b = 2 \times a_r$  applies for single channel configuration.

② Determined by channel height, anchor length and required concrete cover " $c_{nom}$ " as stated in EN 1992-1-1 (EC2), chapter 4.4.1. Channel height  $h_{inst}$  in brackets for HZA 38/23 apply only for channel types with weld-on anchor.

③ Only for centric tensile stress, and for HZA 41/22 also if exposed to stress in channel longitudinal direction.

④ For transverse and angled tensile load the distance from the edge of the unstressed component may be reduced to  $a_{r,red} = 0.5 \times a_r$  or 50 mm if, as in the illustration on page 36, additional reinforcement is used.

⑤ Additional anchor reinforcement must be used for angled tensile load  $\leq 45^\circ$  and transverse tensile stress perpendicular to the edge for spacings of 75 to 100 mm, see page 36.

## HALFEN Bolts: Dimensioning / HALFEN HZA Channels: Standard Lengths

### HALFEN Bolts HZS – Load capacity and bending moment

Bolts type HZS – Design values  $F_{Rd}$  and  $M_{Rd}$  ①

 Bolt type	Grade 8.8		Stainless steel A4-50, HCR-50		Stainless steel A4-70	
	$F_{Rd}$ [kN]	Bending moment per bolt ② $M_{Rd}$ [Nm]	$F_{Rd}$ [kN]	Bending moment per bolt ② $M_{Rd}$ [Nm]	$F_{Rd}$ [kN]	Bending moment per bolt ② $M_{Rd}$ [Nm]
29/20 - M12	27.2	61.2	-	-	-	-
38/23 - M12	27.2	61.2	-	-	-	-
38/23 - M16	50.5	155.4	-	-	33.0	116.6
41/22 - M12	27.2	61.2	13.0	21.4	-	-
41/22 - M16	50.5	155.4	24.2	54.3	-	-
53/34 - M16	50.5	155.4	-	-	33.0	116.6
53/34 - M20	79.0	303.0	-	-	51.5	227.2
64/44 - M20	79.0	303.0	-	-	51.5	227.2
64/44 - M24	113.7	524.0	-	-	54.3	183.4

① Observe profile load bearing capacity! If the load bearing capacity of the bolt and the HALFEN Cast-in channel differ; use the smaller of both values.

② Bending moment in the profile or concrete edge; see note below if bending with additional centric or diagonal tensile stress occurs.

#### Variable bending stress:

For façades renders subjected to variable stress conditions (e.g. due to temperature change), the alternating stress amplitude must not exceed a value of  $\sigma_A = \pm 50 \text{ N/mm}^2$  ( $\gamma=1.0$ ) with a mean value of  $\sigma_M$  (relative to the stressed cross section of the bolt).

$$N_{Ed} \leq F_{Rd} \times (1 - M_{Ed} / M_{Rd})$$

$F_{Rd}$  = Bolt design load capacity

$M_{Rd}$  = Design value of possible bending moment

$N_{Ed}$  = Design value of present tensile load

$M_{Ed}$  = Design value of present bending moment

#### Note:

Combine stress values if bending occurs with additional centric or diagonal tensile stress.

# HALFENSCHIENEN HZA

## Dimensioning

### Reduced edge distance $a_r$ , with full central tensile stress

Section A - A  
Dimensions in [mm]

Figure 1: additional reinforcement

### Preconditions for reducing the edge distance to 50 mm

Where minimum structural spacing cannot be maintained when installing HALFEN Channels, HZA 41/22, 29/20 and 38/23, for example, in thin façade panels, the distance to the edge  $a_r$  may

be reduced to 50 mm, if additional anchor reinforcement as shown in figure 1 is used for the anchor loads and tensile splitting.

#### Required reinforcement cross section

$A_s$  [cm<sup>2</sup>] stirrup rebar:

$$\text{req. } A_s = \frac{F_{Rd} \text{ [kN]}}{4 \times \sigma_{Rd} \text{ [kN/cm}^2\text{]}} = \frac{F_{Rd}}{44.8} \text{ cm}^2$$

#### Steel stress

$\sigma_{Rd} = (1.4 \times \sigma_s) = 11.2 \text{ kN/cm}^2$   
with  $\sigma_s = 8 \text{ kN/cm}^2$  as in the approval.  
Approval no. Z-21.4-145 (HZA),  
Z-21.4-1691 (HZA DYNAGRIP)  
for this example.

Required stirrup dimensions			
Profiles	stirrup dimensions [mm]		
	L	ds	d <sub>br</sub>
HZA 29/20, 41/22	250	6	24
HZA 38/23	250	8	32

### Additional reinforcement for HZA 41/22 with edge distance $\geq 75 \text{ mm}$ and $< 100 \text{ mm}$

Figure 2: Additional reinforcement placement

$$\text{req. } A_s = \frac{F_{Rd} \text{ [kN]}}{\sigma_{Rd} \text{ [kN/cm}^2\text{]}} = \frac{F_{Rd}}{11.2} \text{ cm}^2$$

$\sigma_{Rd} \rightarrow$  see above

Additional reinforcement for edge distance for HALFEN Channels HZA 41/22 from  $75 \text{ mm} \leq a_r < 100 \text{ mm}$  and loads perpendicular to the edge (figure 2).

# HALFEN CAST-IN CHANNELS HZA AND HTA

## Dynamic Loading

### Dynamic loads for hot-rolled HALFEN Cast-in channels

The stress amplitudes shown below apply only for anchor channels in the stated material and configurations. Only the matching screws, shown on the right in the table, may be used.

If load cycles are less than  $N = 2 \times 10^6$ , the amplitude for the HTA 40/22 and HTA 50/30 profiles can be found in the diagram below.

Profile anchor configuration ①	Material	allow. stress amplitude $\Delta F = F_o - F_u$ [kN] for tensile stress	approved bolts
29/20-B6, 29/20-Q	1.0044	2.0	M12
38/23-B6, 38/23-Q	1.0044	3.0	M16
	1.4404/1.4571	2.4	
40/22-B6, 40/22-Q	1.0038	2.0	M16
50/30-B6, 50/30-Q		2.4	M16, 20
52/34-Q		7.0	M20
53/34-B6, 53/34-Q	1.0044	6.0 / (12 <sup>②</sup> )	M16, 20
	1.4404/1.4571	4.0 / (10 <sup>②</sup> )	
55/42-Q	1.0038	8.0	M20
64/44-Q/L ②	1.0044	15.0 <sup>②</sup>	M20, 24
	1.4404/1.4571	11.0 <sup>②</sup>	
72/48-Q	1.0038	7.0	M24, 27, 30

- ① Anchor configurations:  
B6: with bolt anchor  
Q: with I-anchor welded transverse to the channel  
Also refer to approvals Z-21.4-34 (valid until 08/2017) and Z-21.4-1691
- ② values apply for anchor channels with weld-on anchors type I 140/7,1 with anchor/weld joint position Q/L (cross/lengthwise)

### Ordering example for dynamic loads:

**HZA 38/23 - FV - 350**  
(standard order includes bolt anchor B6) or:  
**HTA 52/34 - Q - FV - 550**

### Example:

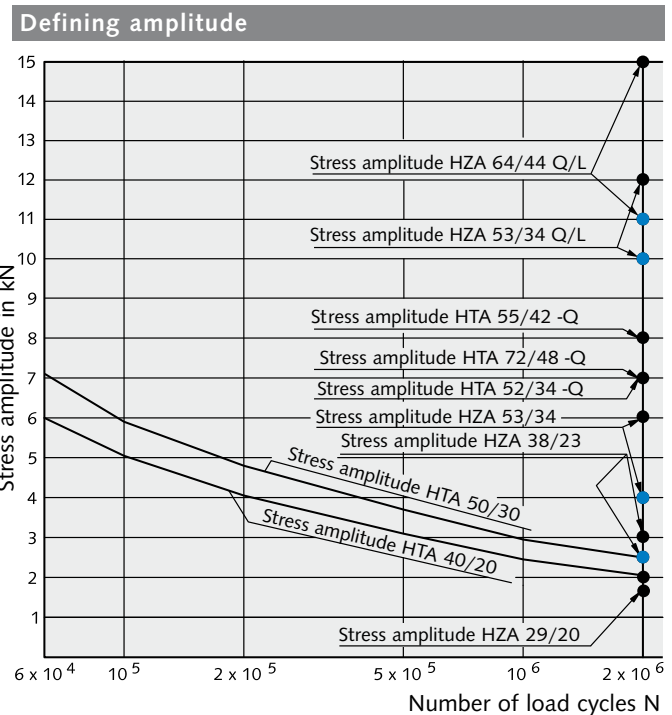

HZA 38/23 profile - FV (standard, hot-dip galvanized),  
channel length = 250mm

max. load:

$$12 \text{ kN} \quad (\text{allow. } F = \frac{16.8 \text{ kN} \rightarrow \text{page 33}}{1.4}) = \frac{F_{Rd}}{1.4}$$

including dynamic load:

$$3 \text{ kN} \quad (\text{stress amplitude } \Delta F)$$

# HGB Handrail Connections

## The advantages at a glance

Construction specialists consider the HALFEN HGB Handrail connections to be particularly well suited for fastening banisters to the thin front faces of balcony slabs.

### Fast and cost-effective

- adjustable anchorage
- can also be used in slabs as thin as  $h \geq 100$  mm
- installed with bolts instead of welding or drilling
- pre-planning reduces on-site construction time
- all attached components remain fully adjustable or are easily replaced as required

### Safe and reliable

- statically verified installation
- no damage to visible surfaces of concrete slabs
- also suitable to secure mandatory safety rails during construction (Refer to: EN 795 "Guard rails")
- use with HALFEN high-strength bolts to ensure a secure and statically sound connection of banister components

## General

### Regulatory requirements

Balconies are part of the structural system. "They must be designed, constructed, maintained and modified in such a fashion that public order and safety, especially to health or life, is not endangered". (MBO = Musterbauordnung / model building code 07 and construction guidelines).

Technical guidelines issued by public notice as technical building regulations must be observed.\*

Technical rules provide information on load parameters, calculation, dimensioning of structural products,

construction types, structural layouts etc. A requirement of regional building codes refers to structural stability: "All structures must, as a whole and in its individual components, be structurally self-supporting". This stability must be statically verifiable based on current technical standards.

A further building regulation addresses traffic loads, for example: Balconies and loggias must be fitted with safety rails to prevent falls when they border on to an area with a drop of more than one metre. For a drop height up

to 12 m the minimum banister height is 0.90 m measured from the upper surface of the finished floor surface or accessible ledge. For drop heights greater than 12 m the banister height must be at least 1.10 m. For exceptions see the German Federal building regulations / Deutsche LandesBauOrdnung.

Other regulations, not covered here, address the design, dimensioning, required spacings in the guard rail design, fire protection, thermal/sound insulation and rainwater drainage.

\*through the highest construction supervision authorities of the German Federal States

### Regulations, standards and directives (to be observed when designing safety rails)

#### Regional Building Codes

Individual regional states have their own building codes and regulations. All current technical regulations require proof of structural safety and integrity. A static calculation or a building authority certificate is required when designing and dimensioning the fixings for guard rails.

#### VOB – Part B, § 4, execution of construction:

§ 4.2 (1) It is the contractor's responsibility to provide the static documentation in accordance with the contract. He has to observe the recognized standards of practice as well as with the provisions of the law and regulatory directives. VOB (Vergabe- und Vertragsordnung für Bauleistungen / Tender and Contract Regulations for the German building industry) Part B, § 4.3, requires the contractor to report to the customer, in writing, any obvious design flaws, which he as the expert must be able to recognize. He alone is responsible for any resulting defect and consequential expenses. If he has satisfied his reporting obligation, the responsibility for the defect passes to the customer (defect example: banister attachment mounted in too thin a concrete slab).

#### BVM Directive

Directive on metal banisters / balustrades, published by the: BVM Berufsverband Metall / Federal Association of German Metalworkers.

#### Other applicable regulations and standards (Extract):

- Accident Prevention Regulation "General Provisions" (VGB 1)
- Industrial Safety Regulations
- ETB – Directive "Fall Prevention Installations", 1985 Issue
- Stainless Steels, EC3 part 1–4

- EN 1992-1-1 (EC2): Design and construction of concrete support structures; with National Annex (NA)
- EN 1991 (EC1): General effects on load structures; with National Annex (NA)
- EN 1993 (EC3): design and construction of steel structures; with National Annex (NA)

# HALFEN HGB HANDRAIL CONNECTIONS

## Materials / Corrosion Protection

### Stainless Steel A4:

Chromium is the most important alloy element in stainless steel. A specific chromium concentration ensures the generation of a passive layer on the surface of the steel that protects the base material against corrosion. This explains the high corrosion resistance of stainless steel.

*"Anchor channels in stainless steel may be used outdoors – also in an industrial and coastal environment, but may not be directly exposed to salt water".*

See guidelines for "Metal banisters and balustrades" issued by the BVM (Bundesverband der Metallverarbeiter) (German Association of Metalworkers).

### HALFEN Cast-in channels, stainless steel

Description	Stainless steel			
	Materials	Standard	Corrosion resistance class according to EN 1993-1-4, table A.3	
Channel profile	1.4404 or 1.4571	EN 10 088	III	
Ribbed-head anchor	Reinforcing steel B500B Reinforcing steel BSt 500 NR	DIN 488		

### HALFEN Bolts, stainless steel

Description	Stainless steel			
	Materials	Standard	Corrosion resistance class according to EN 1993-1-4, table A.3	
Bolt	A4-70: 1.4404 or 1.4571	EN 3506-1 and EN 10 088	III	
Hexagonal nut	A4-70: 1.4404 or 1.4571	EN 3506-2 and EN 10 088	III	
Washer	1.4404 or 1.4571	EN 10 088	III	

- WB = Steel mill finish
- A4 = Stainless steel

### Galvanized:

Dipped in a galvanizing bath at a temperature of approximately 460°C, a method used primarily for open-profile channels.

Galvanized material for interior, dry rooms, for instance when installing staircase banisters in residential buildings, schools or commercial retail stores.

**Available on request**

### Banister height

The minimum height  $h_b$  of a banister is 0.90m from the top surface of the finished floor or accessible ledge to the upper edge of the rail. For drop heights of more than 12.0m the banister must be at least 1.10m in height. (Exceptions; as specified in regional building codes)

It would be advisable to have one uniform minimum height of 1.00 m as has already been mandated in the commercial sector and in a number of European countries.

### Balcony slab

Anchor channels or dowel installations require concrete of at least C 20/25 grade. If the concrete grade is less than C 20/25 grade or it is unknown a case-by-case decision must be made.

The thickness of the balcony slab must be at least  $h = 100 - 150$  mm when the HGB is mounted in the slab edge (depends on channel profile and according to German HGB approval). Other types of installation and systems require a thicker slab. All weather-exposed concrete-embedded installations (e.g. for balconies) must be made of stainless steel.

### Spacings

Any structural design must take all basic requirements for railings and banisters into account. As a general rule, all railings and banisters must be designed so that personal injury is ruled out, for instance with correct spacing of rails, lattice bars or panels. They should also be designed so as not to entice but instead to discourage anyone from climbing over. The specific requirements for guard rail design are determined by the intended use (residential, public, commercial) and the drop height involved. Also observe the building codes of each country or region, the ETB guidelines "Fall Protection Components" and DIN 18065 (Stairs in Buildings – definition, rules, key measurements) and guard rail regulation applicable at the construction site. In Germany these are the "Geländer-Richtlinie 2012 (BVM Berufsverband Metall)", Federal Association of German Metalworkers.

$b$  = clear distance between the back of the veneer and the front face of the balcony slab or gutter / kick plate

- ① clear distance between bottom edge of hand rail and top edge of facing / lower structure
- ② clear distance between the top edge of the finished floor and the bottom edge of the facing / lower structure
- ③ axis spacing between posts
- ④ clear distance between horizontal facings
- ⑤ clear distance between vertical facings

# HALFEN HGB HANDRAIL CONNECTIONS

## Dimensioning

### Dimensions

The forces acting on the banister must be transferred into the main building structure. It is necessary to verify that the forces

- a) are wholly supported by the banister and
- b) can be transferred via the connecting elements into the balcony slab.

$$N_{Ed} = \frac{M_{Ed}}{(e - 0.41 \cdot x)} + H_{Ed}$$

$N_{Ed}$  = tensile force on the anchor

$e$  = distance between channel axis and outer edge of the banister base plate

$x$  = maximum concrete pressure zone level according to appendix 8, table 8a and 8b

### Banister heights

Drop height	Minimum height of rails (recommended)	Note
Less than 12 m	90 cm (100 cm)	Relevant regional building regulations and if necessary other regulations e.g. for civil constructions must be observed.
Greater than 12 m	110 cm	

### Calculation

#### 1. Banister load $h$ according to

##### EN 1991-1-1/NA Table 6.12 DE

"Calculation must assume 100% traffic load in drop direction and 50% of traffic load (but not less than 0.5 kN/m) in the opposite direction."

for example: residential buildings and communal areas with low foot traffic	$q_k = 0.5 \text{ kN/m}$
for example: rooms for mass assembly, commercial sales spaces, corridors	$q_k = 1.0 \text{ kN/m}$
for example: areas with large gatherings of people, factories, workshops	$q_k = 2.0 \text{ kN/m}$

#### 2. Vertical loads $v$ according to BVM guidelines

Load assumptions to calculate vertical loads are according to the BVM guidelines for guard rails/banisters.

from dead weight of structure including any renders	$v_1 = 0.40 \text{ kN/m}$
from window box	$v_2 = 0.35 \text{ kN/m}$
support capacity	$v_3 = 0.15 \text{ kN/m}$

#### 3. Wind loads $F_w$ according to EN 1991-1-4 and EN 1991-1-4/NA

Velocity force $q$ in $\text{kN/m}^2$ and total wind pressure $F_w$ are calculated according to EN 1991-1-4 with EN 1991-1-4/NA.
--

## Dimensioning

Extract from HGB approval Z-21.4-1912, page 6

### 3.2.2 Actions and required verifications

The actions  $H_{Ed}$ ,  $V_{Ed}$ ,  $M_{Ed}$  and  $N_{Ed}$  have to be determined according to the calculation basics as in appendix 7. The ratio in the design calculation between horizontal action and bending moment is limited to:

$$\frac{H_{Ed}}{M_{Ed}} \leq 1.5 [1/m] \quad H_{Ed} \text{ [kN]}; M_{Ed} \text{ in [kNm]}$$

It has to be verified that the design action value  $E_d$  does not exceed the design resistance value  $R_d$ :

$$E_d \leq R_d \quad \text{see table 3.1 and 3.2 below}$$

$E_d$  = Design action value ( $N_{Ed}$ ,  $V_{Ed}$ ,  $M_{Ed}$ )  
 $R_d$  = Design resistance value ( $N_{Rd}$ ,  $V_{Rd}$ ,  $M_{Rd}$ )

For a standard case the following equation for the design action value applies (permanent load and variable load acting in the same direction):

$$E_d = \gamma_G \cdot G_k + \gamma_Q \cdot Q_k$$

$G_k$ ;  $Q_k$  = characteristic value of permanent load or variable load according to recognized standards for load assumptions  
 $\gamma_G$ ;  $\gamma_Q$  = partial safety factors for permanent and variable action

Extract from HGB approval Z-21.4-1912, page 7

Table 3.1 Required verifications for tensile loads

Steel failure	$N_{Ed} \leq N_{Rd,s}$ $\leq N_{Rd,s,s} \text{ (for single-bolt fixing)}$ $\leq 2 N_{Rd,s,s} \text{ (for two-bolt fixing)}$
Pull out failure	
Concrete failure with anchor reinforcement	
Spalling	

Table 3.2 Required verifications for shear loads

Steel failure	$V_{Ed} \leq V_{Rd,s}$ $\leq V_{Rd,s,s} \text{ (for single-bolt fixing)}$ $\leq 2 V_{Rd,s,s} \text{ (for two-bolts fixing)}$
Concrete failure with anchor reinforcement	
Concrete edge failure with anchor reinforcement	$V_{Ed} \leq V_{Rd,c}$
	$M_{Ed} \leq M_{Rd,c}$

With combined loads the following interactions must be verified:

- $$\max. ( N_{Ed} / N_{Rd,s} )^2 + \max. ( V_{Ed} / V_{Rd,s} )^2 \leq 1.0$$

or

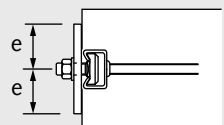

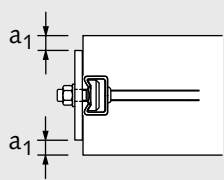

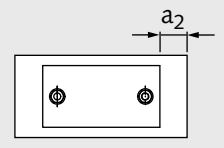

$$\max. ( N_{Ed} / N_{Rd,s} ) + \max. ( V_{Ed} / V_{Rd,s} ) \leq 1.2$$
- $$M_{Ed} / M_{Rd,c} + 1.5 V_{Ed} / V_{Rd,c} \leq 1.5 \quad \text{for } 0.333 \leq V_{Ed} / V_{Rd,c} \leq 1.0$$

Table 7: Size and position of required minimum reinforcement

Description	Anchor channels			
	38/17	40/22 40/25	50/30 49/30	52/34 54/33
Stirrup / Quantity	3 Ø 8 $l_b = 200 \text{ mm}$	3 Ø 8 $l_b = 250 \text{ mm}$	3 Ø 10 $l_b = 300 \text{ mm}$	3 Ø 12 $l_b = 400 \text{ mm}$
Edge rebar, top and bottom [mm]	Ø 8	Ø 8	Ø 10	Ø 12

### Required minimum reinforcement:

One stirrup is placed centrally between the channel anchors and one stirrup directly next to each anchor at the channel ends (if positioned near to the edge, between the anchor and component edge).

Extract; HGB approval Z-21.4-1912, appendix 8

Table 9: Design resistance for each bolt

Tensile				
Bolts Ø	M12	M16	M20	
$N_{Rd,s,s}$ [kN]	4.6	16.9	31.4	49.0
	8.8	44.9	83.7	130.7
	A4-, HC-50	14.8	27.4	42.8
	A4-70*	31.6	58.8	91.7
Shear				
$V_{Rd,s,s}$ [kN]	4.6	12.1	22.6	35.2
	8.8	27.0	50.2	78.4
	A4-, HC-50	10.6	19.8	30.9
	A4-70*	22.7	42.2	66.0

\* Values also apply for all stainless steels of strength class 70 (see also HGB approval, appendix 4)

### Design resistance of concrete pressure zone

$$M_{Rd,c} = 0.81 \cdot x \cdot b \cdot \frac{f_{ck}}{\gamma_{Mc}} \cdot (e - 0.41 \cdot x)$$

where:

- $x$  = maximum height; concrete pressure zone (see table 8a and 8b)
- $b$  = width of pressure zone = width of anchor plate  $b_p$
- $f_{ck}$  = characteristic compression strength of concrete in accordance with EN 206-1:2001-07, for concrete strength  $\geq C30/37$  only calculate using  $f_{ck} = 30 \text{ N/mm}^2$
- $e$  = distance between anchor channel axis and outer edge of the anchor plate (see illustration on page 47, table 6)
- $\gamma_{Mc} = 1.5$  (partial safety factor)

$V_{Rd,c}$ [kN]		6.7	9.0		11.7		12.7	
Maximum height of concrete pressure zone x		$0.25 \cdot e^{①}$	$0.25 \cdot e^{①}$		$0.30 \cdot e^{①}$		$0.40 \cdot e^{①}$	

① e = distance between anchor channel axis and outer edges of the anchor plate. For asymmetrical anchor plates the smallest distance to the outer edge of the anchor plate is used for calculation.

### Dimensioning example HALFEN HGB Guard rail fittings

- $M_{Ed}$  = used to calculate applicable moment relative to the channel axis
- $e_{v1}, e_{v2}, e_{v3}$  = distance of the vertical loads to the front edge of the channel
- $e_{h1}, e_{Fw}$  = distance of the horizontal loads to the front edge of the channel
- $H_{Ed}$  = used to calculate the applicable horizontal effect
- $V_{Ed}$  = used to calculate the applicable vertical effect
- $h, F_w$  = horizontal load effects
- $v_1, v_2, v_3$  = vertical load effects
- $b_p, h_p$  = anchor plate width and height

# HALFEN HGB HANDRAIL CONNECTIONS

## Calculation example

### 1 Calculation example

Post spacing	1.5 m
Post height from FFL	1.0 m
Structure height	9.0 m < 25.0 m
Banister load	0.5 kN/m (residential buildings)
Concrete slab thickness	180 mm

Distance channel axis to component edge	$c_1 = 90$ mm
Width of banister anchor plate	$b_p = 150$ mm
Height of banister anchor plate	$h_p = 150$ mm

Bolt spacing	$p = 80$ mm
Concrete strength	C30/37

### 3 Load

#### Vertical loads:

Dead load, banister including siding	$v_1 = 0.40$ kN/m
Dead load, flower box	$v_2 = 0.35$ kN/m
Vertical traffic load on the banister	$v_3 = 0.15$ kN/m

#### Horizontal loads:

Banister load	$h = 0.50$ kN/m
Wind force	$q = 0.50$ kN/m <sup>2</sup> (according to EN 1991-1-4 NA. B. 3)

(assumption: building height 9.0 m < 10.0 m, not susceptible to resonance frequency, inland wind zone 1)

#### Cantilevers:

$$e_{h1} = 1.0 + 0.06 + \frac{0.18}{2} = 1.15 \text{ m}$$

$$e_{Fw} = \frac{(1.15 + 0.075)}{2} - 0.075 = 0.53 \text{ m}$$

$$e_{v1} = 0.10 \text{ m}$$

$$e_{v2} = 0.20 \text{ m}$$

$$e_{v3} = 0.10 \text{ m}$$

#### Wind load bearing zone:

$$A = (1.00 + 0.06 + \frac{0.18}{2} + \frac{0.15}{2}) \cdot 1.5 = 1.84 \text{ m}^2$$

#### External pressure coefficient (acc. table 7.1 EN 1991-1-4):

$$h/d = 1, \text{ area B}$$

$$c_{pe,1} = -1.1 \text{ (wind-suction)}$$

$$c_{pe,10} = -0.8 \text{ (wind-suction)}$$

according to EN 1991-1-4 chapter 7.2.1

the following is valid:

$$1 \text{ m}^2 < A \leq 10 \text{ m}^2$$

$$c_{pe} = c_{pe,1} + (c_{pe,10} - c_{pe,1}) \cdot \lg A = -1.1 + (-0.8 + 1.1) \cdot \lg 1.84 = -1.02$$

#### Wind suction:

$$F_w = c_{pe} \cdot q \cdot A = -1.02 \cdot 0.50 \cdot 1.84 = -0.94 \text{ kN}$$

#### Action per support:

**Wind load**  $F_{w,Ed} = -0.94 \cdot 1.5 = -1.41$  kN (Suction) with  $\gamma_F = 1.5$

**Banister**  $H_{Ed} = 0.5 \cdot 1.5 \cdot 1.5 = 1.13$  kN with  $\gamma_F = 1.5$

**Dead load banister**  $V_{1,Ed} = 0.40 \cdot 1.5 \cdot 1.35 = 0.81$  kN with  $\gamma_F = 1.35$

**Load from flower box**  $V_{2,Ed} = 0.35 \cdot 1.5 \cdot 1.35 = 0.71$  kN with  $\gamma_F = 1.35$

**Vertical load on banister**  $V_{3,Ed} = 0.15 \cdot 1.5 \cdot 1.5 = 0.34$  kN with  $\gamma_F = 1.5$

#### Determining bearing reactions $H_{Ed}$ , $V_{Ed}$ and $M_{Ed}$

Not classed as an utility (escape) balcony therefore combination with wind load is not required.

#### Load case 1: V + banister load

$$M_{Ed} = 0.81 \cdot 0.10 + 0.71 \cdot 0.20 + 0.34 \cdot 0.10 + 1.13 \cdot 1.15 = 1.56 \text{ kNm}$$

$$V_{Ed} = 0.81 + 0.71 + 0.34 = 1.86 \text{ kN}$$

$$H_{Ed} = 1.13 \text{ kN}$$

#### Load case 2: V + wind

$$M_{Ed} = 0.81 \cdot 0.10 + 0.71 \cdot 0.20 + 1.41 \cdot 0.53 = 0.97 \text{ kNm}$$

$$V_{Ed} = 0.81 + 0.71 = 1.52 \text{ kN}$$

$$H_{Ed} = 1.41 \text{ kN}$$

#### Selected:

**HGB-E 49/30, l = 200 mm, stainless steel A4**

**Bolt spacing p = 80 mm**

**2 bolts HGB-M 50/30 M12, A4-70,**

**Required minimum reinforcement:**

**Stirrups 3 Ø 10, l<sub>b</sub> = 300 mm**

(see page 48 approval → app. 6, table 7),

**Edge rebar 2 Ø 10**

#### Splitting the moment into a load pair

$$N_{Ed} = \frac{M_{Ed}}{(e - 0.41 \cdot x)} + H_{Ed}$$

$$e = \frac{h_p}{2} = 75 \text{ mm} \quad (\text{see approval Z-21.4.1912 appendix 7})$$

$$x = 0.30 \cdot e = 0.30 \cdot 75 = 22.5 \text{ mm}$$

see page 49 (appendix 8/table 8b)

$$e - 0.41 \cdot x = 75 - 0.41 \cdot 22.5 = 65.8 \text{ mm}$$

## HALFEN HGB HANDRAIL CONNECTIONS

### Calculation example

#### Load case 1: V + banister load

$$N_{Ed} = \frac{1.56 \text{ kNm}}{0.0658 \text{ m}} + 1.13 \text{ kN} = \mathbf{24.84 \text{ kN}} \rightarrow \text{decisive}$$

$$V_{Ed} = \mathbf{1.86 \text{ kN}} \rightarrow \text{decisive}$$

#### Load case 2: V + wind

$$N_{Ed} = \frac{0.98 \text{ kNm}}{0.0658 \text{ m}} + 1.41 \text{ kN} = 16.30 \text{ kN}$$

$$V_{Ed} = 1.52 \text{ kN}$$

#### Verifications

**Geometrical boundry conditions** according to approval Z-21.4-1912 appendix 6, table 6 have been met.

#### Verification of steel capacity

Design resistance (steel) channel HGB 49/30 using 2 bolt fixing

$$N_{Rd,s} = 25.8 \text{ kN} \quad \text{see page 48 (appendix 8, table 8b)}$$

$$V_{Rd,s} = 25.8 \text{ kN}$$

#### Channel, centric pull load

$$\frac{N_{Ed}}{N_{Rd,s}} = \frac{24.84}{25.8} = 0.96 < 1 \quad \checkmark$$

#### Channel, shear load

$$\frac{V_{Ed}}{V_{Rd,s}} = \frac{1.86}{25.8} = 0.07 < 1 \quad \checkmark$$

#### Channel, interaction

$$\left(\frac{N_{Ed}}{N_{Rd,s}}\right)^2 + \left(\frac{V_{Ed}}{V_{Rd,s}}\right)^2 = \left(\frac{24.84}{25.8}\right)^2 + \left(\frac{1.86}{25.8}\right)^2$$

$$= 0.93 + 0.01 = 0.94 < 1 \quad \checkmark$$

Design resistance (steel) **bolt M12, A4-70**

$$N_{Rd,s,s} = \mathbf{31.6 \text{ kN}} \quad \text{see page 48 (appendix 8, tab. 9)}$$

$$V_{Rd,s,s} = \mathbf{22.7 \text{ kN}}$$

#### Bolt, centric pull load

$$\frac{0.5 \cdot N_{Ed}}{N_{Rd,s,s}} = \frac{0.5 \cdot 24.84}{31.6} = 0.39 < 1 \quad \checkmark$$

#### Bolt, shear load

$$\frac{0.5 \cdot V_{Ed}}{V_{Rd,s,s}} = \frac{0.5 \cdot 1.86}{22.7} = 0.04 < 1 \quad \checkmark$$

#### Bolt, interaction

$$\left(\frac{0.5 \cdot N_{Ed}}{N_{Rd,s,s}}\right)^2 + \left(\frac{0.5 \cdot V_{Ed}}{V_{Rd,s,s}}\right)^2 = 0.39^2 + 0.04^2 = 0.15 < 1 \quad \checkmark$$

#### Verification of concrete capacity

Design resistance concrete

$$V_{Rd,c} = 11.7 \text{ kN}$$

see page 49 (appendix 8, table 8b)

$$M_{Rd,c} = 0.81 \cdot x \cdot b \cdot \frac{f_{ck}}{\gamma_{Mc}} \cdot (e - 0.41 \cdot x)$$

$$M_{Rd,c} = 0.81 \cdot 22.5 \cdot 150 \cdot \frac{30}{1.5} \cdot 65.8 = 3597615 \text{ Nmm}$$

$$= \mathbf{3.60 \text{ kNm}}$$

Concrete edge failure

$$\frac{V_{Ed}}{V_{Rd,c}} = \frac{1.86}{11.7} = 0.16 < 1 \quad \checkmark$$

$$\frac{M_{Ed}}{M_{Rd,c}} = \frac{1.56}{3.60} = 0.43 < 1 \quad \checkmark$$

$\frac{V_{Ed}}{V_{Rd,c}} = 0.16 < 0.333$  → According to the approval verification of interaction is not required, see page 46 (approval/ page 7).

#### Verifying the ratio between horizontal action and bending moment

$$\frac{H_{Ed}}{M_{Ed}} = \frac{1.13 \text{ kN}}{1.56 \text{ kNm}} = 0.72 < 1.5$$

→ Design model is applicable  
see page 46 (approval/ page 6)

# HALFEN HTU Cast-in channels

## The advantages at a glance

**T**he perfect technical solution for attaching trapezoidal steel sheet to concrete.

HALFEN HTU Cast-in channels and self-tapping screws have become a standard everyday solution in the construction industry.

### Safe and dependable

- optimal shape of the anchoring elements means safe and low slip anchorage
- the polystyrene-filler prevents the drill or self-tapping-screws hitting concrete
- building authority approved

### Quick and cost-effective

- simple installation
- quick and easy installation of trapezoidal sheeting
- two anchor designs,  $A_N$  and D for optimal adapting to planned reinforcement

HALFEN HTU Cast-in channels  
Anchor design  $A_N$

HALFEN HTU Cast-in channels  
Anchor design D

# HALFEN HTU CAST-IN CHANNELS

## Application Examples

Trapezoidal roof sheet metal attachment

Installing HALFEN HTU Cast-in channels in the front face of a slab

Façade fixed using HALFEN HTU Cast-in channels

Vertical HALFEN HTU Cast-in channels for connecting façade panels

Assembly of trapezoidal sheet metal using self-tapping screws

HALFEN HTU Cast-in channels in a pre-stressed concrete beam

Accessories

### General

The **HALFEN Trapezoidal metal sheet installation channels** were developed in cooperation with the Association for the light-weight steel construction industry (IFBS *Industrieverband für Baustysteme im Stahlleichtbau*). Made as a C-shaped channel in stainless steel or hot-dip galvanized steel with at least two welded anchors, and approved by the German Institute of Building Technology (DIBt Deutsches Institut für Bautechnik).

**Connecting elements** between channel and steel trapezoidal profiles must be designed according to IFBS guidelines "Connections for use with constructions made of steel sheet cold profiles" or the relevant manufacturer's ETA (European Technical Approval).

Approval no. Z-21.4-84

Approval no. Z-14.1-4

### Material / Corrosion protection

#### Hot-dip galvanized FV:

Dipped in a galvanising bath at a temperature of approximately 460°C. This method is used primarily for open-profile channels.

#### HALFEN HTU Cast-in channels, steel hot-dip galvanized

	Steel		
	Material	Standard	Zinc coating
Channel profiles	1.0038	EN 10 025-2	FV: ≥ 50 µm
Anchor A <sub>N</sub> , D	■		

**Connecting elements:** Galvanized Steel according to (IFBS) approval no. Z-14.1-4 or the relevant manufacturer's ETA.

#### Stainless steel A4:

Chromium is the important element in stainless steel. A specific chromium concentration ensures the generation of a passive layer on the surface of the steel that protects the base material against corrosion. The result is the high corrosion resistance of stainless steel.

- FV = Hot-dip galvanized steel 1.0038
- A4 = Stainless steel 1.4571/1.4404

#### HALFEN HTU Cast-in channels, steel hot-dip galvanized

	Stainless steel A4		
	Material	Standard	Corrosion resistance class according to EN 1993-1-4, table A.3
Channel profiles	1.4404 or 1.4571	EN 10 088	III
Anchors A <sub>N</sub> , D	■		

**Connecting elements:** Stainless steel as agreed and contracted from screw suppliers

# HALFEN HTU CAST-IN CHANNELS

## Installation, Assembly

### Installation

The ready-to-install HTU Channel is embedded flush with the final concrete surface. It is advisable to level the concrete surface and to apply a slight slope to the outer edge of the concrete. This is to ensure that the trapezoidal sheet metal rests only on the HTU Channel. According to German approval a heightened installation of up to 5 mm is also possible.

#### Trapezoidal sheet metal fixing in wall applications

#### Screw placement

#### Assembly (with self-tapping screw)

- use a power-driver to fix the self-tapping screw; a pilot hole is not required. Even 4-fold overlapping at joints is not a problem with self-tapping screws
- use a power-driver with approximately 1500rpm and a size 10 socket

Alternatively, if the trapezoidal sheet metal manufacturer requires a minimal support width larger than 60 mm, this can be achieved through a flush channel installation and a flat concrete surface. Ensure that pre-stressed concrete trusses are properly aligned, centred and absolutely plane. Maintaining a 20 mm gap between individual channel ends is recommended.

#### Trapezoidal sheet metal fixing in roof applications

Dimensions in mm

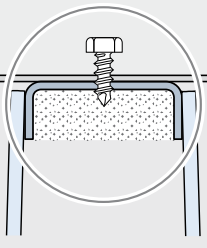

#### Recommended butt joint gap between two channels

- suitable tools for various screws can be obtained from the screw supplier
- the trapezoidal sheet metal must be attached in the central third of the channel back; Screws must be positioned at a minimum distance of 25 mm from the channel ends

## Dimensioning

Table 1 Maximum design load-carrying capacity  $F_{Ed}$

Profile HTU	Anchor spacing $s$ [mm]	max. $F_{Ed}$ [kN]		max. $F_{Ed}$ [kN]		max. evenly distributed load $q_{Ed}$ [kN/m]
		$p = s$	$p = s/2$	$p = s/2$	$p = s/2$	$q_{Ed}$
60 / 22 / 3	450	4.6		3.5	15.5	
	150	7.0		3.5	46.6	
60 / 22 / 6	450	7.0		3.5	15.5	
	150	7.0		3.5	46.6	

$\sqrt{N_{Ed}^2 + V_{xEd}^2 + V_{yEd}^2} \leq \text{max. } F_{Ed}$

Concrete  $\geq$  C20/25

Table 2 Minimum distance when exploiting maximum load as in table 1

HTU	Profile	Minimum interaxial spacing and edge distance					
		$a_a$ ① [mm]	$a_r$ ② [mm]	$a_e$ ③ [mm]	$a_f$ ④ [mm]	$h$ ⑤ [mm]	$b$ ⑥ [mm]
Type AN	60/22/3	200	100	20	20	100 + nom c	200
	60/22/6	200	100	20	20	100 + nom c	200
Type D	60/22/3	200	100	20	20	75 + nom c	200
	60/22/6	200	100	20	20	75 + nom c	200

① If the (trapezoidal sheet metal) channels are placed so that the anchors of adjacent channels are offset by at least 200 mm, the axial spacing  $a_a$  may be reduced to 80 mm.

② If not exploiting the maximum load capacity  $F_{Ed}$ , see table above, the edge distance  $a_r$  may be reduced. This applies only for central tensile stress  $N_{Ed}$ .

$$a_{r \text{ red.}} = \frac{\text{actual } N_{Ed}}{\text{max. } F_{Ed}} \times a_r \geq 50 \text{ mm}$$

**actual  $N_{Ed}$**  = design rating of actual load  
**max.  $F_{Ed}$**  = maximum load as in the table above

The edge distances must not be reduced if transverse stress ( $V_{xEd}$ ,  $V_{yEd}$ ) is present.

③ With full exploitation of maximum load  $F_{Ed}$  as in the table above, the last anchor must be at least 100 mm from the component edge.

④ When fully exploiting maximum load capacity  $F_{Ed}$ , see table above, the "last anchors" of adjacent channels must be at least 150 mm apart.

⑤ Depends on the anchor's size and the required concrete cover.

⑥ Minimum width of building component for a one channel layout.

Accessories

**T**he efficient and established installation systems for timber roof structures, masonry restraints and connectors for concrete façades are proven practical solutions for the construction industry, greatly improving construction time with significant cost-saving.

### HALFEN HSF Rafter shoe

Suitable for horizontal forces acting on rafter and collar beam roofs.

### HALFEN HNA Timber fixing strap

Suitable for all acting loads e.g. wind loads in roof structures.

### HALFEN ML+BL Brick tie anchor system

For connection of tension and compression loads from concrete walls elements.

### HALFEN HVL-M Precast connection HALFEN HVL-E Cast-in channel

Suitable for horizontal loads in concrete wall elements (loads perpendicular to the bracket).

### HALFEN HKW

Corner guard  
Wall and column  
corner protector;  
application in industry  
and parking structures.

# HALFEN HTU CAST-IN CHANNELS

## Application Examples

HALFEN HSF Rafter shoe 6/12

HALFEN HKZ Restraint tie with serrated washer

Airbus paintshop with HALFEN HVL Restraint tie

HVL-System in precast building components

Connecting construction timbers to concrete using the HNA

Timber roof construction with HALFEN HNA Fixing straps

Corner guards in an industrial environment

HALFEN ML Brick-ties anchor system

# ROOF & WALL

## HALFEN Rafter Shoe HSF

In modern wood constructions, rafter shoes type HSF 6/12 are used to support the horizontal forces in rafter and collar tie roofs.

### The advantages at a glance:

- minimal planning; simply specify the profile and position of the HALFEN Cast-in channels in the concrete element
- clear statics with flexible rafter shoes
- complex and therefore costly support structures are not necessary
- simple and unproblematic roof constructions:
  - a) adjustable support plate
  - b) adjustable nailing brackets for vertical anchorage for various rafter widths from 60 to 120 mm
  - c) adjustable in longitudinal rafter axis  $\pm 15$  mm
- freely adjustable rafter spacings in the longitudinal axis of the HALFEN Channel without additional measures
- hot-dip galvanized for excellent corrosion protection

### Example

Definition  $c_{1,1}$  and  $c_{1,2}$  see page 15

The horizontal forces are transferred into the main concrete structure using (ETA) European Technical approved HALFEN HTA-CE Cast-in channels.

During assembly ensure that the serration in the counter plates engages in the base plate. The marking on the counter plates must be at right angles to the slot in the base plate.

### Rafter roof static system:

$$F_{1,d} < F_{Rd}$$

Design values $F_{Rd}$			
Load $F_{Rd}$	Required HALFEN Cast-in channel	Min. edge distance ②	Required HALFEN Bolt
[kN/Rafter]	Type	$C_{1,2}$ [mm]	Type dimensions
12.6	HTA-CE 38/17	75	HS 38/17 - M16 x 40
16.8	HTA-CE 40/22 HTA-CE 40/25	100	HS 40/22 - M16 x 50
19.6	HTA-CE 50/30 HTA-CE 49/30	150	HS 50/30 - M16 x 50

- ① The maximum rafter strength is limited by the design load of each individual component of the rafter shoe. Load tests resulted in a mean breaking load of 50 kN. With normal loads larger than the recommended load capacity (= about  $\frac{1}{3}$  of the breaking load), the rafter spacing may need to be reduced.
- ② If lower loads are present then the minimum edge distance  $C_{1,2}$  for the HALFEN Cast-in channels can be reduced. The distance to the concrete edge must be at least 170 mm.
- ③ Make sure that the HALFEN Cast-in channels are installed flush with the concrete surface. Use spacers if necessary.

# ROOF & WALL

## HALFEN HNA Timber Fixing Strap

Typical installation of timber beams using HNA nailing straps with HALFEN Cast-in channels embedded in concrete.

### Type selection

Dimensions in [mm]

To provide an optimal base for roof framework, continuous HTA-CE HALFEN Cast-in channels or HTA-CE HALFEN Cast-in channel short elements are cast in the concrete; suitable for concrete ring beams or slabs. The type of HTA-CE HALFEN Cast-in channels, nailing straps and nails depend on the assumed loads (e.g. wind force).

For calculation and design criteria see:

- EN 1991-1-4 (EC1) und EN 1991-1-4/NA
- EN 1995-1-1 (EC5)

The timber fixing straps can be positioned on one or both sides of the timber beams or rafters. Refer to the following table for  $F_{Rd}$  load capacities. The beams / framework must be secured against twisting when straps are used only on one side of the beams, (e.g. by nailing to the upper wood roof boarding).

### Ordering example:

# ROOF & WALL

## Brick Tie Anchor Systems ML + BL

HALFEN ML and BL Brick tie anchors are tried and tested efficient installation systems for securing brick walls, masonry in-fills, partition walls, brick renders (with or without ventilation gap and heat insulation) to concrete

walls, concrete supports, steel or wooden structures.

**The brick tie anchors are able to move freely in the brick tie channels, considerably reducing cracks caused by masonry settlement.**

All HTA-CE and HMS profiles have a foam filling to prevent concrete ingress. The channels are attached to the formwork using standard nails.

The HALFEN Brick tie anchors are inserted at the recommended intervals (static requirements) in the brick wall during construction (see page 65). The anchors are inserted in the brick tie channels, laid flat between the rows of brick and pressed into the mortar. The perforations in the anchors optimise anchorage with the mortar.

### Debond sleeve ML-G 150 for wall attachments, suitable for ML - anchors

Permits movement in the longitudinal anchor direction, e.g. in long masonry bonds or partition walls adjoining concrete load bearing structures; prevents cracks forming.

**ML-G 150**, material: soft PVC, material thickness 1.5 mm

### Firewall connection according to DIN 4102-4: 2016-05

#### Solid masonry fire walls

Statically required connections of load bearing, room enclosing, masonry walls can also be designed as fire walls in accordance with DIN 4102-4 section 9.8.4 using HALFEN Brick tie channels.

The anchorage to adjacent components (steel reinforced concrete supports or walls) meet the requirements for stability and fire resistance if the anchorage conforms to the standards set in DIN 4102-4 section 9.8.4 (figure 9.13, variant 2).

Connection of a load bearing masonry wall as a fire wall according to DIN 4102-4 section 9.8.4 (figure 9.13) or according to EN 1996-1-2: 2011-04 (figure E.4B)

Horizontal section

Vertical section

#### Definition, DIN regulations

##### ① HALFEN Cast-in channel

##### ② Insulation layer:

According to DIN 4102-4 section 9.2.14 insulation layers in connecting joint gaps must "[...] be made of non-flammable mineral fibre; have a melting point  $\geq 1000^{\circ}\text{C}$  as stated in DIN 4102-17; and have a gross density of  $\geq 30\text{ kg/m}^3$  and must not smoulder".

##### ③ Masonry:

Bricks (gross density class) and minimum wall thickness according to EN 1996-1-2: 2011-04.

##### ④ Masonry connection (vertically adjustable)

##### ⑤ Expansion joint

##### ⑥ Concrete

#### Product information

HALFEN Cast-in channel type ①	④ Brick tie anchor (see page 62 ff.)	
	for standard grout	for thin mortar

HTA 28/15	ML	ML 1
HTA 38/17	BL	-

#### Anchor spacings

HALFEN Brick tie anchors can be used at any position along the whole length of the brick tie channel. Generally the standard spacing between the anchors is 250 mm (4 anchors per metre).

# ROOF & WALL

## Restraint with Turnbuckle SPV

**Ensure adequate screw depth:**  
 M12 → ≥ 10 mm  
 M16 → ≥ 13 mm

### Product description

The restraint with turnbuckle SPV is suitable for compressive and tensile loads up to  $F_{Ed} = 14.0 \text{ kN}$  and for clearances up to 200 mm. By turning the clamping sleeve (sleeve has a right and left-hand thread), the clearance can be freely adjusted within the given range. Connected to building structure using HALFEN Cast-in channels (order separately).

### Included in delivery

- Turnbuckle SPH
- 2 HALFEN Bolts (1 right-hand thread, 1 left-hand thread)
- 3 standard nuts
- 2 washers and
- 2 locking washers SIC

### Ordering example:

Item name: **SPV - 7,0 - 100 - A4**

## Restraint Tie HKZ

$F_{Ed} = \text{load}$

- A** HALFEN Channel suitable for HKZ-Restraint ties
- B** HALFEN Channel or permitted dowel according to approval

### Product characteristics

The serrations in the bracket and in the washer ensure positive static load transmission.

Two HALFEN Cast-in channels embedded at right angle to each other in the concrete ensure three-dimensional adjustability.

## Precast Connection HVL

### Assembly:

The connecting strap is delivered ready to be installed: The screw fastening sets and the counter plate are pre-assembled for fast installation.

### Assembly part HVL-M

Pre-assembled, consisting of:

- serrated hammer-head strap
- 1 serrated counter plate
- 2 bolt sets  
(Bolt HS 38/17 - M12 x 50+ washer + tapered compressed spring)

### Installation component 1 HVL-E:

HALFEN Cast-in channel HTA 38/17-300-SK with 2 bolt anchors and one loop end anchor.

### Installation component 2:

HALFEN Cast-in channel HTA-CE 38/17-150 with 2 bolt anchors.

### Corrosion protection

- hammer-head strap, cast-in channel: hot-dip galvanized
- HALFEN Bolts, nuts, washers and springs: galvanized

These parts are covered by mortar after installation.

### Material/Finish:

- **FV** = **Corner profile:** Steel hot-dip galvanized 1.0038  
**Anchor:** B500B (BSt 500 S)
- **A2** = **Corner profile:** Stainless steel 1.4307  
**Anchor:** B500B/A NR

### Ordering example:

### Advantages:

- 92° angle ensures a tight fit to the formwork. This prevents concrete seeping between the formwork and the corner profile, resulting in a smoother finish
- U-shaped concrete reinforced anchors do not interfere with the corner reinforcement and allow easy installation of the reinforcement
- anchors are of reinforcement steel quality to guarantee optimal anchorage
- competitive pricing through serial production

# Curtain Wall HCW

## The advantages at a glance

**T**odays modern buildings require façades of the highest quality that can be installed quickly and safely. This is the reason the Curtain Wall System is chosen more and more frequently by architects and investors.

### Fast and cost-effective

- 3-dimensional adjustable connection when used with anchor channels
- uses bolts instead of welds
- fast assembly reduces installation time

**HCW B2**  
For modular façades.  
Anchored to the top surface of floor slabs.

**HCW B1**  
For post and beam façades.  
Anchored to the top surface of floor slabs.

**HCW-ED/EW**  
For post and beam façades.  
Anchored to the front surface of floor slabs.

# HALFEN CURTAIN WALL SUPPORT SYSTEMS HCW

## General

### HALFEN Curtain wall system

This type of construction is characterized by an outer wall with a continual outer skin (see figure 1).

The façade is attached to the main structure of the building using only the required number of point-load connections.

Curtain wall façades protect the interior of buildings from external, unwanted environmental influences whilst still

permitting visual contact with the outside environment with structural components that can be opened or are transparent. Specifically, this includes sufficient stability against wind loads, adequate insulation against frost in winter, heat in summer as well as against external noise. In addition, various requirements must be met to protect against fire and other critical situations.

Figure 1 partial view of a façade

### Post and beam façade and the modular façade

Basically, we distinguish between two methods of curtain wall façades constructions: the **post and beam façade** and the **modular façade**.

#### Post and beam façade

One basic distinctive difference is the way expansion in the façade is distributed (for example; thermal expansion). With the post and beam façade (see figure 2) the vertical and horizontal frame supports are installed in spacings corresponding to the façade elements. The supports are installed with an expansion gap between components allowing for sufficient expansion.

Figure 2

The respective longitudinal and transverse connections have an expandable joint. The filler elements (glass or panel) installed in a post and beam structure permit movement within the tolerance of the designed expansion joint. The glass and filler elements are delivered separately and are then installed on site, requiring on-site scaffolding.

#### Modular façade

With the modular façade method (see figure 3), the façade is made of prefabricated elements, in which glass, natural stone or infills are pre-installed. The façade profiles are designed as a key and slot system to allow for expansion.

Figure 3

This method provides immediate weather protection and allows the building contractor to start interior work on the respective floor directly after the prefabricated modules have been installed. Scaffolding is not required with this method of construction.

**Note:** HALFEN Channel HCW 52/34 is not included in the HTA-CE/HZA-Approval.

3 bars, diameter 8mm, spaced at 100mm

### Channel dimensions and edge spacing

# HALFEN CURTAIN WALL SUPPORT SYSTEMS

## HALFEN Cast-in Channel HCW 52/34

### Channel load data

The following load failure were averaged from three tests:

$F_V$ failure	=	142.3 kN
$F_N$ failure	=	47.4 kN
$F_{res, failure}$	=	$\sqrt{F_N^2 + F_V^2}$ = 150.0 kN

The load deformation diagram (see right) may be used to determine allowable loads based on acceptable displacement and the required safety factor according to local building codes. The diagram is based on the following:

- tensile and transverse loads were increased at a ratio of 1:3 up to breaking point
- concrete slab thickness  $\geq 125$  mm and reinforcement as shown on page 76
- concrete strength class  $\geq C 20/25$  N/mm<sup>2</sup>
- load is transferred into the channel via two HALFEN Bolts HS 50/30 M20 Grade 8.8. The bolt spacing is 150 mm. A sample calculation is shown below.

The safety factor is freely selected. However, it must be determined which factors are actually to be implemented, whether these are based on project specific boundary condition or on valid building regulations.

**Calculation example:** Assumed safety factor  $v = 3$   
(failure test load / working load)

Average failure load from the tests:

Transverse tensile stress	$F_V$ ultimate	=	142.3 kN
Tensile stress	$F_N$ ultimate	=	47.4 kN
Res. diagonal tensile load	$F_{res, ultimate}$	=	150.0 kN

Actual working loads at bolts (specification by façade stress engineer):

Transverse tensile stress	$F_V = 35$ kN
Tensile stress	$F_N = 10$ kN

Allowable load with  $v = 3$  against average ultimate load from tests:

perm. $F_V$	=	$142.3 / 3$	=	47.4 kN
perm. $F_N$	=	$47.4 / 3$	=	15.8 kN
perm. $F_{res}$	=	$150 / 3$	=	50.0 kN

Control: Working load $F_V$	=	35 kN < 47.4 kN
Working load $F_N$	=	10 kN < 15.8 kN
Working load $F_{res}$	=	$\sqrt{(10)^2 + (35)^2} = 36.4$ kN < 50 kN

Displacement at working load < 1 mm (see diagram).

Actual safety factor for average ultimate load  $\gamma_1 = (150 / 36.4) = 4.12$ .

### Load deformation diagram

### Corresponding HALFEN Bolts HS 50/30

Depending on the load size, we recommend the use of HALFEN Bolts HS 50/30 M16 or M20, grade 8.8 in combination with HALFEN Cast-in channel HCW 52/34. The bolts stated below are zinc galvanized with a special coating.

For interior use this design is considered equivalent to a hot-dip galvanized design. Other bolt sizes and materials can be supplied. Please contact us for detailed information. Addresses can be found on page 91.

#### Type selection HALFEN Bolts HS 50/30 GV Grade 8.8

Thread	Material grade	Available length L [mm]	Allowable resulting bolt load (all directions) perm. $F_s$ [kN]	Allowable bending moment [Nm]	Recommended torque [Nm]	If the bolt is stressed in the direction of a slot its load capacity must be verified taking bolt flexure into account.

Other channel lengths from 150 – 6070 mm are available

# HALFEN CURTAIN WALL SUPPORT SYSTEMS

## Edge of Slab Brackets HCW-ED Post and Beam Façades

### Application example

HALFEN Edge of slab brackets are connected in pairs, one each side of the mullion, and are available in two types:

**Type HCW-ED** Brackets are designed to support both **vertical and horizontal loads**.

**Type HCW-EW** Brackets are designed to support **horizontal wind loads only**.

The brackets guarantee a simple adjustable connection. The HALFEN Bolts (connection: bracket to HALFEN Channel) and the standard hexagonal bolts M12 (connection: bracket to façade mullion) must be grade strength 8.8. A round auxiliary hole in the long arm of the brackets can be used for temporary attachments; example: temporary fixing of brackets to support post with self-tapping screws until the final connection is made.

The brackets are made of high quality aluminium material. Special nylon discs are placed between the "Wind load" Bracket HCW-EW and support post.

To guarantee correct installation, the HCW-ED brackets are marked 'R' for right, 'L' for left and 'UP' for top.

### Bracket dimensions [mm]

**HCW-ED Brackets**  
for dead loads  
and wind loads

Serrated washers included in delivery

**HCW-EW Brackets**  
wind loads only

## Dimensioning

# HALFEN CURTAIN WALL SUPPORT SYSTEMS

## Design Loads using two HCW-EW Brackets, Loads in the HALFEN Bolts (HCW-ED)

### Design wind loads for type HCW-EW

Max. applied design load $F_{hd}$ [kN]			
Size	Bracket code	max. $F_{vd}$ [kN]	max. $F_{hd}$ [kN]
Small	HCW-EW 1	0	8.5
Medium	HCW-EW 2	0	11.67
Large	HCW-EW 3	0	13.96

HCW-EW Brackets are only suitable for wind loads.

### Forces acting on the T-head bolts at the channel (HCW-ED)

The design reaction forces components in the HALFEN Bolts at connection curtain wall bracket to HALFEN Cast-in channel are calculated by multiplying the design loads  $F_{vd}$  and  $F_{hd}$  at connection curtain wall bracket and façade support post with the factors  $s_x$ ,  $s_y$  and  $s_z$ .

The factors are dependent on the bracket geometry, the load direction and the bolt position (see figure on the right). See table below for the multiplication factors for determining the design reaction forces in the HALFEN Bolts.

#### Lower installation position of HALFEN Bolt (Position 3)

Bracket	Dead load $S_i = (F_{vd} / 2) \times s_i$			Wind load $S_i = (F_{hd} / 2) \times s_i$			Resulting load 45° $S_i = (\text{res. } F_d / 2) \times s_i$		
	$s_x$	$s_y$	$s_z$	$s_x$	$s_y$	$s_z$	$s_x$	$s_y$	$s_z$
HCW-ED 1	0.5	3.2	-1.0	-1.0	1.0	0.0	-0.3	3.0	-0.7
HCW-ED 2	0.5	3.6	-1.0	-0.5	1.0	0.0	0.0	3.3	-0.7
HCW-ED 3	0.5	4.0	-1.0	-0.4	1.0	0.0	0.1	3.5	-0.7

#### Upper installation position of HALFEN Bolt (Position 1)

HCW-ED 1	0.6	1.3	-1.0	-1.0	3.6	0.0	-0.3	3.4	-0.7
HCW-ED 2	0.6	1.6	-1.0	-0.5	3.1	0.0	0.0	3.4	-0.7
HCW-ED 3	0.6	1.9	-1.0	-0.4	2.9	0.0	0.1	3.4	-0.7

### Calculation basis

### Calculation example

**Assumed:** slab thickness = 200 mm, width of mullion = 80 mm, projection a = 80 mm (install. position see page 79)  
 design dead load  $F_{vd} = +3.5$  kN  
 design wind load (wind suction)  $F_{hd} = +7.0$  kN

**Selected:** HALFEN Bracket type HCW-ED 2  
 ⇒ possible projection  $M = 82 \pm 25$  mm  
 ⇒ Interaction diagram type HCW-ED 2 (see page 80) proves that the assumed load is within the permitted load interaction zone

#### Determination of the design reaction forces in a HALFEN Bolt

① Lower installation position (Position 3)

$$\begin{aligned} S_x &= (3.5/2) \times 0.5 + (7/2) \times (-0.5) = -0.88 \text{ kN} \\ S_y &= (3.5/2) \times 3.6 + (7/2) \times 1.0 = +9.80 \text{ kN} \\ S_z &= (3.5/2) \times (-1.0) + 0 = -1.75 \text{ kN} \end{aligned}$$

⇒ Resulting bolt load

$$\text{res. } S_d = \sqrt{(-0.88)^2 + (9.80)^2 + (-1.75)^2} = 9.99 \text{ kN per bolt}$$

② Upper installation position (Position 1)

$$\begin{aligned} S_x &= (3.5/2) \times 0.6 + (7/2) \times (-0.5) = -0.70 \text{ kN} \\ S_y &= (3.5/2) \times 1.6 + (7/2) \times 3.1 = +13.65 \text{ kN} \\ S_z &= (3.5/2) \times (-1.0) + 0 = -1.75 \text{ kN} \end{aligned}$$

⇒ Resulting bolt load

$$\text{res. } S_d = \sqrt{(-0.70)^2 + (13.65)^2 + (-1.75)^2} = 13.78 \text{ kN} \rightarrow \text{each bolt} \rightarrow \text{determining factor for bolt selection}$$

#### Selected HALFEN Channel:

**HTA-R 50/30 - 350 - 3 Anchor - FV** see page 78

with  $V_{yRd} = 2 \times 5.6 \text{ kN} > 2 \times |S_z| = 2 \times 1.75$   
 ( $a_r \geq 75$  mm)

$$F_{Rd} = 2 \times 14.0 \text{ kN} > 2 \times \text{res. } S_d = 2 \times 13.78 \text{ kN}$$

**Check:** bolt spacing:  $P = 80 + 2 \times 36 = 152$  mm

$> 150$  mm ✓

#### Selected HALFEN Channel:

**HS 50/30 - M12 × 60 GV 8.8**

Requirement according to interaction diagram see page 80

# HALFEN CURTAIN WALL SUPPORT SYSTEMS

## Top of Slab Brackets HCW-B1

### Support brackets for horizontal and vertical loads

### Typical installation

### HALFEN Brackets HCW-B1

HALFEN Brackets HCW-B1 for installing in the top of concrete slabs, are available in two load ranges and three cantilever sizes.

The brackets are made in grade S355 quality galvanized steel. Vertical adjustability is  $\pm 10$  mm.

Three dimensional adjustability is ensured when used in combination with HALFEN HTA-CE in channels.

The lateral connecting plates are connected to the façade posts using M8 screws (not included). The façade planner is responsible for providing the static verification for the support posts. Use M16 HALFEN Bolts, grade 8.8 (order separately), to connect the base bracket to the HALFEN Cast-in channel. Depending on the façade type, the connection between the connecting plate and the base bracket can be designed either laterally adjustable or as a fixed point.

# Accessories

## The advantages at a glance

**T**o complement the product range HALFEN offers a wide range of accessories. Everything from one source.

### The product range

Everything you need from the framing channel right down to the nut, the locking washer, threaded rod, locking and threaded plate even an adjustable connector; we provide all you need for your project.

**HALFEN Framing channels**  
You are guaranteed to find an economical solution for your projects in the extensive HALFEN Framing channels product range.

**HJV Adjustable coupler**  
Allows free height adjustment in suspended installations.

### KLP Clamp

The clamp allows fast connection of framing channels to I-beams.

The whole range of framing system products can be found at [www.halfen.de](http://www.halfen.de) **MT-FBC** (Flexible bolt connections) or **MT-FFC** (Flexible framing connections).

## ACCESSORIES

### Framing Channels HM/HZM/HL/HZL – Application Examples

#### Type Overview

#### Application Examples

**HALFEN Framing channels HM/HZM and slotted HALFEN Framing channels HL/HZL can be attached to a substructure in a number of ways:**

- ① fastened to concrete or masonry with wedge anchors HB-VMU plus
- ② bolted to HALFEN Cast-in channels type HTA-CE and HZA
- ③ connected to threaded rods
- ④ clamped to steel profile supports
- ⑤ welded to steel components
- ⑥ screwed or nailed to wooden structures

**HALFEN Framing channels** are a part of the HALFEN Framing system:

- installations for plant engineering
- technical equipment in buildings
- heavy and light installations

Typical application of the HALFEN Powerclick system

The product range for framing system applications can be found in the following Technical Product Informations:  
**HALFEN Flexible bolt connections,**  
**HALFEN Flexible framing connections**  
 or **HALFEN Powerclick System.**
